---	--	---	--

Investment Objective

The Fund's investment objective is to seek long-term total return while striving to generate current income.

Investment Approach

The Fund is not constrained by management against any index and allows the Adviser broad flexibility to invest in a wide variety of fixed income instruments. Actively managed sector betas include Agency Mortgage-Backed Securities (MBS), Non-Agency MBS, Commercial MBS, Global Developed Credit, High Yield, international, Emerging Markets Fixed Income and U.S. Government sectors.

Investment Philosophy

The Fund seeks current income and capital appreciation by actively allocating across fixed income sectors using duration management based on the manager's view of, among other things, future interest rates and market conditions. The manager retains broad discretion to modify the Fund's duration within a wide range, including the discretion to construct a portfolio of investments for the Fund with a negative duration.

Investment Process

The Fund uses a top down sector allocation approach raising or lowering weightings based on DoubleLine's analysis of sector fundamentals and relative valuations. Allocation decisions are made by Jeffrey Gundlach. Once selected, specialized teams for each asset class incorporate a bottom-up security selection process based on their deep experience and research.

Sector allocations and Fund holdings are subject to change at any time and should not be considered a recommendation to buy or sell any security. Portfolio holdings generally are made available 30 days after month-end by visiting www.doublelinefunds.com. The source for the information in this report is DoubleLine Capital, which maintains its data on a trade date basis.

Past performance does not guarantee future results. Mutual fund investing involves risk; Principal loss is possible.

Risk Disclosure

Mutual fund investing involves risk; Principal loss is possible. Investments in debt securities typically decrease in value when interest rates rise. This risk is usually greater for longer-term debt securities. Investments in lower-rated and non-rated securities present a greater risk of loss to principal and interest than higher-rated securities. Investments in ABS and MBS include additional risks that investors should be aware of such as credit risk, prepayment risk, possible illiquidity and default, as well as increased susceptibility to adverse economic developments. The Fund invests in foreign securities which involve greater volatility and political, economic and currency risks and differences in accounting methods. These risks are greater for investments in emerging markets. The Fund may use leverage which may cause the effect of an increase or decrease in the value of the portfolio securities to be magnified and the Fund to be more volatile than if leverage was not used. Derivatives involve special risks including correlation, counterparty, liquidity, operational, accounting and tax risks. These risks, in certain cases, may be greater than the risks presented by more traditional investments. Investing in ETFs involve additional risks such as the market price of the shares may trade at a discount to its net asset value ("NAV"), an active secondary trading market may not develop or be maintained, or trading may be halted by the exchange in which they trade, which may impact a Funds ability to sell its shares. The fund may make short sales of securities, which involves the risk that losses may exceed the original amount invested.

Index Disclosure

ICE BofA 1-3 Year Eurodollar Index is a subset of the ICE BofA Eurodollar Index including all securities with a remaining term to final maturity less than 3 years. The ICE BofA Eurodollar Index tracks the performance of U.S. dollar-denominated investment grade quasigovernment, corporate, securitized and collateralized debt publicly issued in the eurobond markets. Qualifying securities must have an investment grade rating (based on an average of Moody's, S&P and Fitch). One cannot invest directly in an index.

London Interbank Offering Rate (LIBOR) is an indicative average interest rate at which a selection of banks known as the panel banks are prepared to lend one another unsecured funds on the London money market.

Definition of Terms

Agency - Mortgage securities whose principal and interest are effectively guaranteed by the U.S. Government agency including Fannie Mae (FNMA) or Freddie-Mac (FHLMC).

Below Investment Grade - Refers to a security that is rated below investment grade. These securities are seen as having higher default risk or other adverse credit events, but typically pay higher yields than better quality bonds in order to make them attractive. They are less likely to pay back 100 cents on the dollar.

Beta - Beta is the measure of a mutual funds' volatility in relation to the market. By definitions, the market has a beta of 1.0, and individual mutual funds are ranked according to how much they deviate from the market.

Credit Distribution is determined from the highest available credit rating from any Nationally Recognized Statistical Rating Agency ("NRSRO", generally S&P, Moody's and Fitch). DoubleLine chooses to display credit ratings using S&P's rating convention, although the rating itself might be sourced from another NRSRO. In limited situations when the rating agency has not issued a formal rating, the rating agency will classify the security as unrated.

Duration - A commonly used measure of the potential volatility of the price of a debt securities, prior to maturity. Securities with a longer duration generally have more volatile prices than securities of comparable quality with a shorter duration.

Investment Grade - Refers to a bond considered investment grade if its credit rating is BBB- or higher by Standard & Poor's or Baa3 or higher by Moody's. Ratings are based on a corporate bond model. The higher the rating the more likely the bond will pay back par/100 cents on the dollar.

Market Price - The weighted average of the prices of the Fund's portfolio holdings. While a component of the fund's Net Asset Value, it should not be confused with the Fund's NAV.

Standard Deviation - A measure of the dispersion of a set of data from its mean. The more spread apart the data, the higher the deviation. Calculated by the square-root of the variance.

Weighted Average Life (WAL) - The average number of years for which each dollar of unpaid principal on a loan or mortgage remains outstanding.
