

Statement of Additional Information

February 1, 2024

Fixed Income

DoubleLine Opportunistic Bond ETF (DBND)
DoubleLine Commercial Real Estate ETF (DCRE)[†]
DoubleLine Mortgage ETF (DMBS)

Equities

DoubleLine Shiller CAPE[®] U.S. Equities ETF (CAPE)

[†] Prior to February 1, 2024, the DoubleLine Commercial Real Estate ETF traded under the ticker symbol "DCMB."

DoubleLine ETF Trust offers shares of each of its separate series listed above (each, a **"Fund"** and, together, the **"Funds"**) through a single Prospectus dated February 1, 2024. Each Fund is also offered through one or more Summary Prospectuses.

This Statement of Additional Information (**"SAI"**) is not a prospectus but contains information in addition to that set forth in the Prospectus, as supplemented from time to time. This SAI should be read in conjunction with the Prospectus for the Fund(s) in which you may invest. A Prospectus or Summary Prospectus may be obtained at no charge by calling (855) 937-0772 or on the Funds' website at www.doubleline.com. This SAI, although not in itself a prospectus, is incorporated by reference into the Prospectus in its entirety.

The audited financial statements of each of the Funds within each Fund's report to shareholders for the fiscal period ended September 30, 2023 and the notes thereto are incorporated herein by reference to the Trust's annual report to shareholders, which was filed with the U.S. Securities and Exchange Commission on Form N-CSR on December 1, 2023 (Accession Number: 0001885076-23-000010). Each Fund's audited financial statements in the Trust's annual report to shareholders may be obtained upon request at no charge by calling (855) 837-0772 and on the Funds' website at www.doubleline.com.

GENERAL INFORMATION

DoubleLine ETF Trust (the “**Trust**”) was formed as a Delaware statutory trust on September 27, 2021 and is registered with the Securities and Exchange Commission (the “**SEC**”) as an open-end management investment company. DoubleLine ETF Adviser LP (the “**Adviser**”) acts as the investment adviser for each fund listed below in the Trust (each, a “**Fund**,” and together, the “**Funds**”).

Each Fund offers one class of shares.

The following table outlines the date of public trading commencement for each Fund currently offered:

| | |
|---|---------------|
| DoubleLine Opportunistic Bond ETF (the “ Opportunistic Bond ETF ”) | April 5, 2022 |
| DoubleLine Commercial Real Estate ETF (the “ Commercial Real Estate ETF ”) | April 4, 2023 |
| DoubleLine Mortgage ETF (the “ Mortgage ETF ”) | April 4, 2023 |
| DoubleLine Shiller CAPE® U.S. Equities ETF (the “ Equities ETF ”) | April 5, 2022 |

(The Opportunistic Bond ETF, Commercial Real Estate ETF and the Mortgage ETF are collectively referred to herein as the “Fixed Income Funds”)

The Funds are classified as non-diversified funds under the Investment Company Act of 1940, as amended (the “**1940 Act**”). Please see the Prospectus for a discussion of the principal investment policies and risks of investing in the Funds.

INVESTMENT RESTRICTIONS

In addition to the investment strategies and the risks described in the Prospectus and in this SAI, each Fund may employ other investment practices and may be subject to other risks, some of which are described below. Further, the Equities ETF is permitted to employ some, but not all, of the investment practices described, and as indicated, below. The Equities ETF operates in reliance on an exemptive order from the SEC (the “**Order**”), which incorporates by reference the conditions and restrictions of a previous SEC order issued to Precidian ETFs Trust, et al. to permit the operation of exchange-traded funds (“**ETFs**”) pursuant to the ActiveShares® non-transparent ETF structure. The Order limits the types of investments the Equities ETF may hold to those listed in its application for the Order. Under the terms of the Order, the Equities ETF may invest only in ETFs, exchange-traded notes, exchange-listed common stocks, exchange-traded preferred stocks, exchange-traded American Depositary Receipts (“**ADRs**”), exchange-traded real estate investment trusts (“**REITs**”), exchange-traded commodity pools, exchange-traded metal trusts, exchange-traded currency trusts and exchange-traded futures that trade on a U.S. exchange contemporaneously with the Fund’s shares, as well as cash and cash equivalents (which are short-term U.S. Treasury securities, government money market funds, and repurchase agreements). In accordance with the Order, the Equities ETF will not purchase any securities that are illiquid investments (as defined in Rule 22e-4(a)(8) under the 1940 Act) at the time of purchase.

Importantly, the Equities ETF’s fundamental and non-fundamental policies listed below will be limited by the terms of the Order.

Fundamental Investment Policies

The investment restrictions below have been adopted as fundamental policies for each Fund unless otherwise noted. A fundamental policy affecting a particular Fund may not be changed without the vote of a majority of

the outstanding voting shares of that Fund (as defined in the 1940 Act). The Equities ETF's fundamental and non-fundamental policies listed below are subject to the investment restrictions and limitations in the Order, as described and indicated below.

1. A Fund may not issue any class of securities which is senior to the Fund's shares of beneficial interest, except to the extent the Fund is permitted to borrow money and except as otherwise consistent with applicable law from time to time.
2. A Fund may borrow money to the extent permitted by applicable law from time to time.
3. A Fund may not act as underwriter of securities of other issuers except to the extent that, in connection with the disposition of portfolio securities or in connection with the purchase of securities directly from the issuer thereof, it may be deemed to be an underwriter under certain federal securities laws.
4. A Fund may not purchase any security if as a result 25% or more of the Fund's total assets (taken at current value) would be invested in a single industry or group of industries (for purposes of this restriction, (i) bank loans and loan participations will be considered investments in the industry of the underlying borrower, (ii) investment companies are not considered to constitute an industry, and (iii) derivatives counterparties are not considered to be part of any industry).
5. A Fund may make loans, including to affiliated investment companies, except to the extent the Fund is prohibited from doing so by applicable law. A Fund may purchase loan participations or otherwise invest in loans or similar obligations, and may make loans directly to borrowers, itself or as part of a lending syndicate. A Fund may purchase debt obligations or other financial instruments in which the Fund may invest consistent with its investment policies, enter into repurchase agreements, or lend its portfolio securities.
6. A Fund may purchase or sell commodities to the extent permitted by applicable law from time to time.
7. A Fund will not purchase real estate directly, but may possess, hold, purchase and/or dispose of it in connection with managing or exercising its rights in respect of its investments. A Fund may, for clarity, (i) purchase interests in issuers which deal or invest in real estate, including limited partnership interests of limited partnerships that invest or deal in real estate, (ii) purchase securities which are secured by real estate or interests in real estate, including real estate mortgage loans, and (iii) acquire (by way of foreclosure or otherwise), hold and/or dispose of real estate that secured, or is otherwise related to, an investment of the Fund. (For purposes of this restriction, investments by a Fund in mortgage-backed securities and other securities representing interests in mortgage pools shall not constitute the purchase or sale of real estate.)

Additional Information Pertaining to the Funds' Fundamental Policies

With respect to fundamental policy number 1 above, senior securities may include any obligation or instrument issued by a Fund evidencing indebtedness. The 1940 Act generally prohibits funds from issuing senior securities, although it does not treat certain transactions as senior securities, such as certain derivatives, short sales, reverse repurchase agreements, firm commitment agreements and standby commitments, provided certain conditions are met.

For purposes of applying the terms of fundamental policy number 4 above, the Adviser will, on behalf of each Fund as applicable, make reasonable determinations as to the appropriate industry classification to assign to each issuer of securities in which a Fund invests. As a general matter, the Funds consider an industry to be a group of companies whose principal activities, products or services offered give them a similar economic risk profile vis à vis issuers active in other sectors of the economy. The definition of what constitutes a particular industry is therefore an evolving one, particularly for issuers in industries that are new or are undergoing rapid development. Some issuers could reasonably fall within more than one industry category. For example, some companies that sell goods over the Internet (including issuers of securities in which certain of the Funds invest) were initially

classified as Internet companies, but over time have evolved into the economic risk profiles of retail companies. The Adviser will use its reasonable efforts to assign each issuer to the category which it believes is most appropriate. In making such determinations for the Commercial Real Estate ETF and the Mortgage ETF, the Adviser will not consider direct or indirect investments in borrowings related to real estate markets (including pooled instruments) to constitute concentration in a particular real estate industry or group of real estate industries. A Fund will consider, to the extent practicable, the holdings of investment companies in which the Fund invests for purposes of determining compliance with the Fund's concentration policy.

For purposes of the Funds' policies (including the fundamental policies discussed above), any actions taken or omitted or investments made in reliance on, or in accordance with, exemptive relief, no action relief, interpretive guidance or other regulatory or governmental action or guidance, shall be considered to have been taken, made, or omitted in accordance with applicable law.

Additional Information Pertaining to the Equities ETF's Fundamental Policies

With respect to fundamental policy number 1 above, in accordance with the Order, the Equities ETF will not make investments or engage in transactions not permitted by the Order. Additionally, in accordance with the Order, the Fund will not hold short positions.

For purposes of applying the terms of fundamental policy number 2 above, the Equities ETF, in accordance with the Order, may not borrow for investment purposes.

With respect to fundamental policy number 4 and 5 above, in accordance with the Order, the Equities ETF will only invest in specific investments permissible by the Order.

For purposes of applying fundamental policies number 6 and 7 above, in accordance with the Order, the Equities ETF will only invest in commodities or real estate through specific investments permissible by the Order.

Other Investment Policies of the Funds

All percentage limitations and requirements (including those set forth in the fundamental policies discussed above) as to investments will apply only at the time of an investment to which the limitation or requirement is applicable and shall not be considered violated unless an excess or deficiency occurs or exists immediately after and as a result of such investment. Accordingly, any later increase or decrease resulting from a change in values, net assets or other circumstances will not be considered in determining whether any investment complies with a Fund's limitation or requirement. Such percentage limitations and requirements do not apply to the asset coverage test set forth in Section 18(f)(1) of the 1940 Act.

The 1940 Act provides that a "vote of a majority of the outstanding voting securities" of a Fund means the affirmative vote of the lesser of (1) more than 50% of the outstanding shares of a Fund, or (2) 67% or more of the shares present at a meeting if more than 50% of the outstanding shares of a Fund are represented at the meeting in person.

Pursuant to Rule 22e-4 under the 1940 Act, each Fund has adopted a liquidity risk management program to assess and manage its liquidity risk. Under its program, a Fund classifies its investments into specific liquidity categories and monitors compliance with limits on investments in illiquid investments. Illiquid investments are generally investments that a Fund cannot reasonably expect to be sold or disposed of in current market conditions in seven (7) calendar days or less without the sale or disposition significantly changing the market value of the instrument. Each Fund will not invest more than 15% of its net assets in illiquid investments. While the liquidity risk management program attempts to assess and manage liquidity risk, there is no guarantee it will be effective in its operation, and it will not reduce the liquidity risk inherent in a Fund's investments. Pursuant to the Order, the Equities ETF will not invest in securities that are illiquid at the time of purchase.

INVESTMENT STRATEGIES

The Funds' Prospectus describes each of the respective Fund's principal investment strategies. The following provides information that supplements the information provided in the Funds' Prospectus.

Certain strategies and instruments described below may not apply to your Fund. Unless a strategy, instrument or policy described below is specifically prohibited by the investment restrictions listed in your Fund's Prospectus, under "Investment Restrictions" in this SAI, the Order (in the case of the Equities ETF) or by applicable law, a Fund may, but will not necessarily, engage in each of the investment practices described below. Except as stated elsewhere in the Funds' Prospectus or this SAI, to the extent the Funds have reserved the freedom to invest in a type of investment or to utilize a particular investment practice, each Fund may invest in such investment or engage in such investment practice without limit.

The Adviser's investment process may take into account a number of factors. These factors may include, among others, standard of living convergence, consumer deleveraging, private sector debt transference and demographic shifts, position in the business cycle, sector returns, relative growth, monetary and fiscal policy, risk integration, market sentiment, behavioral analysis, relative value, market technicals, and government and/or regulatory intervention.

Fixed Income Funds

Each Fixed Income Fund will attempt to achieve its objective by investing in a variety of investments (that may be obligations of domestic or foreign entities), such as but not limited to (as specified in greater detail below), (i) project bonds; (ii) debt obligations issued or guaranteed by governments or governmental agencies (iii) U.S. government securities; (iv) corporate debt securities, including bonds, notes and debentures; (v) corporate and asset-backed commercial paper; (vi) mortgage and other asset-backed securities of all kinds, including collateralized mortgage obligations ("CMOs"), Real Estate Mortgage Investment Conduits ("REMICs") and Re-REMICs (which are REMICs that have been resecuritized); (vii) Enhanced Equipment Trust Certificates ("EETCs") and Equipment Trust Certificate ("ETCs") (viii) variable and floating rate debt securities (including inverse floaters and floating rate notes); (ix) subordinated corporate, mortgage, and asset-backed securities; (x) equity securities of any kind; (xi) commodities; (xii) bank certificates of deposit; (xiii) fixed time deposits and bankers' acceptances; (xiv) money market securities; (xv) repurchase agreements and reverse repurchase agreements; (xvi) hybrid securities; (xvii) obligations of foreign governments or their subdivisions, agencies and instrumentalities or foreign corporate issuers; (xviii) loan participations and assignments; (xix) commercial or residential whole mortgage loans; (xx) derivatives (including but not limited to options, futures contracts, including Treasury futures, swap agreements such as credit default swaps, interest rate swaps, and total and excess return swaps, and currency-related transactions, including forward exchange contracts and futures contracts); (xxi) private placements, including Regulation S and Rule 144A securities; (xxii) futures and options on futures relating to currencies, indexes and other financial factors; (xxiii) loans including, without limitation, bank loans, secured and unsecured senior loans, term loans, mezzanine, second lien, and other subordinated loans, debtor-in-possession loans, exit facilities, delayed funding loans, revolving credit facilities, non-performing loans, re-performing loans, and other fixed and floating rate loans (as well as various forms of securitizations of these and other types of loans); (xxiv) distressed and defaulted debt securities; (xxv) mortgage dollar rolls; (xxvi) other registered investment companies, including ETFs and mutual funds; (xxvii) unrated securities; (xxviii) structured notes; (xxix) municipal bonds and securities; (xxx) collateralized debt obligations such as collateralized loan obligations and collateralized bond obligations; (xxxi) perpetual maturity bonds; (xxxii) inflation-indexed bonds; (xxxiii) convertible securities; (xxxiv) preferred securities; (xxxv) payment-in-kind bonds; (xxxvi) zero-coupon bonds; (xxxvii) custodial receipts, cash and cash equivalents; (xxxviii) short-term, high quality investments, including, for example, commercial paper, bankers' acceptances, certificates of deposit, and bank time deposits; (xxxix) REITs; (xli) credit-linked notes; (xlii) pass-through notes; (xliii) contingent value rights; (xliv) Private Investments in Public Companies ("PIPEs"); (xlv) global depositary notes ("GDNs"); and (xlv) bank capital securities. Each of the Fixed Income Funds generally will invest in some, but generally not all, of these types of investments at any given time, each of which may be denominated in

United States Dollars (“USD”) or any other currency worldwide unless prohibited by a Fund’s investment objective and strategies. Depending on a Fund’s principal investment strategies, the amount of a Fund’s assets that may be committed to any of these types of investments (if any) may vary. The above list of investments is not intended to be an exhaustive list of the types of investments in which the Fixed Income Funds may invest.

Equities ETF

The Equities ETF will attempt to achieve its objective by investing in a variety of investments, subject to and in accordance with the Order, such as but not limited to (as specified in greater detail below): (i) exchange-traded funds, (ii) exchange-traded notes, (iii) exchange listed common stocks, (iv) exchange-traded preferred stocks, (v) exchange-traded American Depositary Receipts (“ADRs”), (vi) exchange-traded real estate investment trusts, (vii) exchange-traded commodity pools, (viii) exchange-traded metal trusts, (ix) exchange-traded currency trusts and (x) exchange-traded futures that trade on a U.S. exchange contemporaneously with the Fund’s shares, as well as cash and cash equivalents (which are short-term U.S. Treasury securities, government money market funds, and repurchase agreements).

Strategies and Investments

In attempting to achieve its investment objective, a Fund may utilize, among others, one or more of the strategies or securities set forth below. The Funds may, in addition, invest in other instruments (including derivative investments) or use other investment strategies that are developed or become available in the future and that are consistent with their objectives and restrictions. The investment strategies described below may be pursued directly by the Funds.

Strategies and Investments of the Fixed Income Funds and the Equities ETF

Borrowing and Other Forms of Leverage. Each Fund may borrow money to the extent permitted by its investment policies and restrictions and applicable law. When a Fund borrows money or otherwise leverages its portfolio, the value of an investment in a Fund will be more volatile and other investment risks will tend to be compounded. This is because leverage tends to exaggerate the effect of any increase or decrease in the value of a Fund’s holdings. In addition to borrowing money from banks, the Fixed Income Funds may engage in certain other investment transactions that may be viewed as forms of financial leverage – for example, entering into repurchase and reverse repurchase agreements, investing collateral from loans of portfolio securities, entering into when-issued, delayed-delivery, or forward commitment transactions, or using derivatives such as swaps, futures, forwards, and options. Notwithstanding the foregoing, in accordance with the Order, the Equities ETF will not borrow for investment purposes.

Commodities. A Fund may invest directly or indirectly in commodities (such as precious metals, industrial metals, natural gas or other energy commodities, and agriculture and livestock). Commodity prices can be more volatile than prices of other types of investments and can be affected by a wide range of factors, including changes in overall market movements, speculative activity of other investors, real or perceived inflationary trends, commodity index volatility, changes in interest rates or currency exchange rates, population growth and changing demographics, nationalization, expropriation or other confiscation, economic or other sanctions, international regulatory, political, and economic developments (for example, regime changes, trade disputes, wars and changes in economic activity levels), and developments affecting supply, demand and/or other market fundamentals with respect to a particular sector, industry, or commodity, such as drought, floods, or other weather conditions, livestock disease, trade embargoes, competition from substitute products, transportation bottlenecks or shortages, insufficient storage capacity, fluctuations in supply and demand, wars, tariffs and international economic, political and regulatory developments. Certain commodities may also originate from or be produced in countries or regions that are experiencing or may experience social and political unrest and may be subject to risks associated with economic, social or political developments in those countries or regions.

A Fund may also use commodity-related derivatives such as commodity-linked swaps, commodity index-linked structured notes and other derivative instruments that provide exposure to the investment returns of the commodity markets without direct investment in physical commodities or commodities futures contracts. Commodity-linked swaps are derivative instruments whereby the cash flows agreed upon between counterparties are dependent upon the price of the underlying commodity or commodity index over the life of the swap. The value of the swap will rise and fall in response to changes in the underlying commodity or commodity index. These swaps expose the Fund economically to movements in commodity prices. A Fund may also invest in commodity-linked notes that pay a return linked to the performance of a commodities index or basket of futures contracts with respect to all of the commodities in an index. In some cases, the return is based on a multiple of the performance of the relevant index or basket. Structured notes may be structured by the issuer or the purchaser of the note. Structured notes are derivative debt instruments with principal payments generally linked to the value of commodities, commodity futures contracts or the performance of commodity indices and interest and coupon payments pegged to a market-based interest rate, such as an industry-standard floating rate or a bank's prime rate. The value of these notes will rise or fall in response to changes in the underlying commodity or related index or investment. A Fund may also take long and/or short positions in commodities by investing in other investment companies, ETFs or other pooled investment vehicles, such as commodity pools. Certain of these other investment vehicles may seek to provide exposure to commodities without actually owning physical commodities, and may therefore produce different results than they would through ownership of the commodities.

A Fund may hold positions in commodity futures contracts. Commodity futures contracts are agreements between two parties in which one party agrees to buy an asset from another party at a later date at a price and quantity that is agreed upon at the time the contract is made. Commodity futures contracts are generally traded on futures exchanges. Upon entering a futures transaction, the Fund is typically required to deposit an initial margin payment to a futures commission merchant. Futures clearinghouses typically mark every futures contract to market at the end of each trading day. If the Fund's futures positions have declined in value, the Fund may be required to post additional margin when its futures contracts are marked-to-market. Prior to the expiration of a futures contract, the Fund may elect to close out its position, at which time a final determination of variation margin is made. At that time, the Fund then realizes any loss or gain on the futures transaction.

The values of these derivatives may fluctuate more than the relevant underlying commodity or commodities or commodity index. The requirements for qualification as a RIC can limit the manner in or extent to which a Fund may enter into certain commodity-related derivatives, such as commodities futures contracts discussed above, and such derivatives may adversely affect the Fund's ability to qualify as a RIC. See "Distributions and Taxes" below.

Convertible Securities. A Fund may invest in convertible securities. Convertible securities include bonds, debentures, notes, preferred stock and other securities that may be converted into or exchanged for, at a specific price or formula within a particular period of time, a prescribed amount of common stock or other equity securities of the same or a different issuer. Convertible securities may entitle the holder to receive interest paid or accrued on debt or dividends paid or accrued on preferred stock until the security matures or is redeemed, converted or exchanged.

The market value of a convertible security is a function of its investment value and its conversion value. A security's investment value represents the value of the security without its conversion feature (*i.e.*, a nonconvertible fixed income security). The investment value may be determined by reference to its credit quality and the current value of its yield to maturity or probable call date. At any given time, investment value is dependent upon such factors as the general level of interest rates, the yield of similar nonconvertible securities, the financial strength of the issuer and the seniority of the security in the issuer's capital structure. A security's conversion value is determined by multiplying the number of shares the holder is entitled to receive upon conversion or exchange by the current price of the underlying security.

If the conversion value of a convertible security is significantly below its investment value, the convertible security generally trades like nonconvertible debt or preferred stock and its market value will not be influenced greatly by fluctuations in the market price of the underlying security. Conversely, if the conversion value of a

convertible security is near or above its investment value, the market value of the convertible security is typically more heavily influenced by fluctuations in the market price of the underlying security. Convertible securities generally have less potential for gain than common stocks.

A Fund's investments in convertible securities may at times include securities that have a mandatory conversion feature, pursuant to which the securities convert automatically into common stock or other equity securities at a specified date and a specified conversion ratio, or that are convertible at the option of the issuer. Because conversion of the security is not at the option of the holder, the Fund may be required to convert the security into the underlying common stock even at times when to do so is not in the best interests of the shareholders.

The Funds also may invest in "synthetic" convertible securities, which will be selected based on the similarity of their economic characteristics to those of a traditional convertible security due to the combination of separate securities or instruments that possess the two principal characteristics of a traditional convertible security, *i.e.*, an income-producing security ("**income-producing component**") and the right to acquire an equity security ("**convertible component**"). The income-producing component is achieved by investing in non-convertible, income-producing securities such as bonds, preferred stocks and money market instruments. Unlike a traditional convertible security, which is a single security having a unitary market value, a synthetic convertible comprises two or more separate securities, each with its own market value. Therefore, the "market value" of a synthetic convertible security is the sum of the values of its income-producing component and its convertible component. For this reason, the values of a synthetic convertible security and a traditional convertible security may respond differently to market fluctuations. The convertible component is achieved by purchasing warrants or options to buy common stock at a certain exercise price, or options on a stock index. The Funds may also purchase synthetic securities created by other parties, typically investment banks, including convertible structured notes.

More flexibility is possible in the assembly of a synthetic convertible security than in the purchase of a convertible security. Although synthetic convertible securities may be used for a Fund where the two components are issued by a single issuer, thus making the synthetic convertible security similar to the traditional convertible security, the character of a synthetic convertible security allows the combination of components representing distinct issuers, when the Adviser believes that such a combination would better promote a Fund's investment objective. A synthetic convertible security also is a more flexible investment in that its two components may be purchased separately. For example, an investor may purchase a warrant for inclusion in a synthetic convertible security but temporarily hold short-term investments while postponing the purchase of a corresponding bond pending development of more favorable market conditions.

A holder of a synthetic convertible security faces the risk of a decline in the price of the security or the level of the index involved in the convertible component, causing a decline in the value of the call option or warrant purchased to create the synthetic convertible security. Should the price of the stock fall below the exercise price and remain there throughout the exercise period, the entire amount paid for the call option or warrant would be lost. Because a synthetic convertible security includes the income-producing component as well, the holder of a synthetic convertible security also faces the risk that interest rates will rise, causing a decline in the value of the income-producing instrument. Synthetic convertible securities may be created by other parties, including convertible structured notes. Convertible structured notes are income-producing debentures linked to equity, and are typically issued by investment banks.

A Fund's investment in convertible securities may also be generally subject to the risks associated with investment in fixed income securities. See "—Debt Securities Risks."

Custodial Receipts. A Fund may invest in custodial receipts representing interests in securities held by a custodian. The securities so held may include U.S. government securities or other types of securities in which a Fund may invest. The custodial receipts may evidence ownership of future interest payments, principal payments or both on the underlying securities, or, in some cases, the payment obligation of a third party that has entered into an interest rate swap or other arrangement with the custodian or trustee. For certain securities laws purposes,

custodial receipts may not be considered obligations of the U.S. government or other issuer of the securities held by the custodian or trustee. As a holder of custodial receipts, a Fund will bear its proportionate share of the fees and expenses charged to the custodial account.

Derivatives. Some of the instruments in which a Fund may invest are referred to as “derivatives,” because their value “derives” from the value of an underlying asset, reference rate or index. These instruments include options, futures contracts, forward currency contracts, swap agreements and similar instruments. A Fund may enter into derivatives for hedging purposes or otherwise to gain, or reduce, long or short exposure to one or more asset classes or issuers. A Fund may use derivatives with the purpose or effect of creating investment leverage. Derivatives may be more volatile, illiquid and/or more difficult to value than other instruments, and each type of derivative instrument may have its own special risks. Any use of derivatives strategies entails the risks of investing directly in the securities, instruments or assets underlying the derivatives strategies, as well as the risks of using derivatives generally, and in some cases the risks of leverage, described in the Prospectus and in this SAI. In accordance with the Order, the Equities ETF is permitted only to invest in derivatives permitted by the Order, including U.S. exchange-traded futures whose reference assets are assets that the Equities ETF may invest in directly or, in the case of an index futures contract, based on an index of a type of asset that the Equities ETF could invest in directly.

A Fund’s use of derivative instruments exposes the Fund to the credit risk of its counterparty. In the event the counterparty to such a derivative instrument defaults and/or becomes insolvent, the Fund potentially could lose all or a large portion of its investment in the derivative instrument and/or could be delayed in enforcing contractual remedies and obtaining any recovery in respect of its derivative instruments.

Investing for hedging purposes or to increase a Fund’s return may result in certain additional transaction costs that may reduce a Fund’s performance. In addition, when used for hedging purposes, no assurance can be given that each derivative position will achieve a close correlation with the underlying instrument that is the subject of the hedge, or that a particular derivative position will be available when sought by the Adviser. While hedging strategies involving derivatives can reduce the risk of loss, they can also reduce the opportunity for gain or even result in losses by offsetting favorable price movements in other Fund investments. Certain derivatives may create a risk of loss greater than the amount invested.

Equity Securities. The Funds may invest in equity securities. Equity securities are securities that represent an ownership interest (or the right to acquire such an interest) in a company and include common and preferred stock. Common stocks represent an equity or ownership interest in an issuer. Preferred stock represents an equity or ownership interest in an issuer that pays dividends at a specified rate and that has priority over common stock in the payment of dividends. In the event an issuer is liquidated or declares bankruptcy, the claims of owners of bonds take priority over holders of preferred stock, whose claims take priority over the claims of those who own common stock.

While offering greater potential for long-term growth, equity securities generally are more volatile and riskier than some other forms of investment, although under certain market conditions various fixed-income investments have comparable or greater price volatility. Therefore, the value of an investment in a Fund may at times decrease instead of increase. The Funds’ investments may include securities traded over-the-counter (“**OTC**”) as well as those traded on a securities exchange. Some securities, particularly OTC securities, may be more difficult to sell under some market conditions.

Smaller Company Equity Securities. The Funds may invest in equity securities of companies with small market capitalizations. Such investments may involve greater risk than is usually associated with larger, more established companies. Companies with small market capitalizations often have limited product lines, markets or financial resources and may be dependent upon a relatively small management group. These securities may have limited marketability and may be subject to more abrupt or erratic movements in price than securities of companies with larger market capitalizations or market averages in general. To the extent a Fund invests in securities with small market capitalizations, the net asset value (“**NAV**”) of the Fund may fluctuate more widely than market averages.

ESG Considerations. The Adviser has adopted an ESG Investment Policy (the “**ESG Policy**”) to help ensure that risks and opportunities associated with environmental, social and governance (“**ESG**”) matters are appropriately

considered within the Adviser's investment management process. The Adviser adopts ESG integration for the purpose of (1) gaining a more holistic view of relevant investment risks; (2) understanding the potential drivers of performance; and (3) making better-informed decisions. Under the ESG Policy, the Adviser will, subject to the limitations described below, integrate the consideration of one or more ESG factors alongside other non-ESG factors (e.g., financial attributes), when making investment decisions. The Funds do not seek to implement a specific ESG, impact or sustainability strategy.

When performing an ESG assessment, the Adviser conducts a qualitative and/or quantitative assessment of relevant ESG factors that the Adviser believes may impact an investment's risk-return profile. While ESG factors can vary for each investment, they are generally related to the issuer's position on ESG issues. As part of this assessment, the Adviser has established a proprietary research framework to score certain issuers with respect to ESG attributes that may have a potential financial impact on the relevant investment ("**Material ESG Factors**"). Each scored issuer is assigned an environmental score, a social score, and a governance score, with the scoring based on whether the issuer is determined to be subject to material environmental, social, or governance risks that may negatively impact credit quality and/or valuations and/or whether the issuer is believed to not be sufficiently mitigating such risks. Each issuer's environmental, social and governance scores are aggregated into a composite score, reflecting the Adviser's overall ESG view of such issuer. Subject to its ESG Policy and the exceptions noted below, the Adviser seeks to assess the Material ESG Factors involving each investment made on an initial basis and, thereafter, as new material information regarding Material ESG Factors becomes known to the Adviser. Such assessments may prioritize those positions that are significant and where such assessments may have a material economic impact on client accounts.

The Adviser has determined that ESG factors would be expected to have no, a limited or an immaterial impact on the economics or valuation of certain asset class and investment types and that modifying a Fund's portfolio based on ESG factors may be inconsistent with the Fund's investment objective. In such cases, the Adviser generally will not perform an ESG assessment or otherwise take any action based on any ESG factors.

The Adviser generally will not score issuers within certain sectors, such as sovereign debt and emerging market securities. Additionally, the Adviser generally will not assess an issuer for ESG factors altogether if sufficient relevant or reliable information is not readily available. Further, investments in U.S. Treasury securities; cash, cash equivalents and other similar investments; investments made for short-term purposes; collateralized loan obligations; commodities; equities; municipal securities; derivative instruments (irrespective of the reference asset or counter party); and indices (or their components), as well as investments made to obtain broad-based investment exposure or that are required by or integral to a Fund's investment strategies, are generally not assessed for ESG purposes.

Exchange-Traded Notes ("ETNs"). A Fund may invest in ETNs. ETNs have many features of senior, unsecured, unsubordinated debt securities. Their returns are linked to the performance of a particular asset, such as a market index, less applicable fees and expenses. ETNs are listed on an exchange and traded in the secondary market. A Fund may hold the ETN until maturity, at which time the issuer is obligated to pay a return linked to the performance of the relevant asset. ETNs do not typically make periodic interest payments and principal is not protected.

The market value of an ETN may be influenced by, among other things, time to maturity, level of supply and demand of the ETN, volatility and lack of liquidity in the underlying assets, changes in the applicable interest rates, the current performance of the asset to which the ETN is linked, and the credit rating of the ETN issuer. ETNs represent an unsecured obligation and therefore carry with them the risk that the counterparty will default and a Fund may not be able to recover the current value of its investment. The market value of an ETN may differ from the performance of the applicable asset and there may be times when an ETN trades at a premium or discount to the underlying asset's value. This difference in price may be due to the fact that the supply and demand in the market for ETNs at any point in time is not always identical to the supply and demand in the market for the assets on which the ETN's return is based. A change in the issuer's credit rating may also affect the value of an ETN despite the underlying asset remaining unchanged.

ETNs are also subject to tax risk. For tax purposes, no assurance can be given that the Internal Revenue Service (“IRS”) will accept, or a court will uphold, how the Fund characterizes and treats ETNs or amounts realized thereon; further, the requirements for qualification as a RIC may limit the extent to which a Fund may invest in certain ETNs. See “Distributions and Taxes” below.

An ETN that is tied to a specific market index may not be able to replicate and maintain exactly the composition and relative weighting of securities, commodities or other components in the applicable market index. ETNs also incur certain expenses not incurred by their applicable market index, and the Fund would bear a proportionate share of any fees and expenses borne by the ETN in which it invests.

A Fund’s decision to sell its ETN holdings may be limited by the availability of a secondary market. In addition, although an ETN may be listed on an exchange, the issuer may not be required to maintain the listing and there can be no assurance that a secondary market will exist for an ETN. Some ETNs that use leverage in an effort to amplify the returns of an underlying market index can, at times, be relatively illiquid and may therefore be difficult to purchase or sell at a fair price. Leveraged ETNs may offer the potential for greater return, but the potential for loss and speed at which losses can be realized also are greater.

ETNs are generally similar to structured investments and hybrid instruments. For discussion of these investments and the risks generally associated with them, see “Hybrid Securities” and “Structured Investments” in this SAI.

Exchange-Traded Funds and other Investment Companies. A Fixed Income Fund may invest in shares of both open- or closed-end investment companies (including money market funds, single country funds, and ETFs of any kind) and trusts, limited partnerships, limited liability companies or other forms of business organizations, including other pooled investment vehicles sponsored, advised, distributed or serviced by, or otherwise affiliated with, the Adviser, related parties of the Adviser or other service providers to a Fund. In accordance with the Order, the Equities ETF is only permitted to invest in ETFs and other investment companies and pooled vehicles that trade on a U.S. exchange contemporaneously with the Equities ETF’s shares. Investing in another pooled vehicle exposes a Fund to all the risks of that pooled vehicle.

As the shareholder of another investment company, a Fund would bear, along with other shareholders, its *pro rata* portion of the other investment company’s expenses, including advisory fees. Such expenses are in addition to the expenses the Fund pays in connection with its own operations. To the extent the Adviser determines to cause a Fund to invest in pooled or other investment vehicles sponsored or advised by the Adviser or related parties of the Adviser (“**other DoubleLine funds**”), such a decision involves a conflict of interest because any such investment may benefit the Adviser directly or indirectly, including, for example, by affecting the fees the Adviser or its related parties earns from providing services to the other DoubleLine fund or by providing scale to such other DoubleLine fund that the Adviser or its related parties service or sponsor. If a Fund invests in other DoubleLine funds, the Adviser will waive its advisory fee in an amount equal to the advisory fees paid to the Adviser or a related party by other DoubleLine funds and other investment companies in respect of Fund assets so invested. A Fund’s investments in other investment companies may be limited by applicable law. It is possible that, under certain circumstances, a Fund may be prevented by applicable law from investing in other investment companies when doing so may otherwise be the most efficient way for the Fund to obtain exposure to a portfolio of debt securities.

Despite the possibility of greater fees and expenses, investments in other investment companies may nonetheless be attractive for several reasons, especially in connection with foreign investments. Because of restrictions on direct investment by U.S. entities in certain countries, investing indirectly in such countries (by purchasing shares of another fund that is permitted to invest in such countries) may be the most practical and efficient way for a Fund to invest in such countries. In other cases, when a portfolio manager desires to make only a relatively small investment in a particular country, investing through another fund that holds a diversified portfolio in that country may be more effective than investing directly in issuers in that country.

Among the types of investment companies in which a Fund may invest are Portfolio Depositary Receipts (“**PDRs**”) and Index Fund Shares (PDRs and Index Fund Shares are collectively referred to as ETFs). PDRs represent interests in a unit investment trust (“**UIT**”) holding a portfolio of securities that may be obtained from the UIT or purchased in the secondary market. Each PDR is intended to track the underlying securities, trade like a share of common stock, and pay to PDR holders periodic dividends proportionate to those paid with respect to the underlying securities, less certain expenses. Index Fund Shares are shares issued by an open-end management investment company that seeks to provide investment results that correspond generally to the price and yield performance of a specified index (Index Fund). Individual investments in PDRs generally are not redeemable, except upon termination of the UIT. Similarly, individual investments in Index Fund Shares generally are not redeemable. However, large quantities of PDRs known as “Creation Units” are redeemable from the sponsor of the UIT. The liquidity of smaller holdings of ETF shares will depend upon the existence of a secondary market.

Block sizes of ETF shares, also known as “**Creation Units**,” are redeemable from the issuing ETF. The liquidity of smaller holdings of ETF shares will depend upon the existence of a secondary market.

Disruptions in the markets for the securities held by ETFs or other investment companies purchased or sold by a Fund could result in losses on investments in ETFs or other investment companies. ETFs also carry the risk that the price a Fund pays or receives may be higher or lower than the ETF’s NAV. ETFs are also subject to certain additional risks, including the risks of illiquidity and of possible trading halts due to market conditions or other reasons, based on the policies of the relevant exchange. ETFs and other investment companies in which a Fund may invest may be leveraged, which would increase the volatility of a Fund’s NAV.

To the extent a Fund invests in another Fund (such Fund, the “underlying Fund”) in reliance on Section 12(d)(1)(G) of the 1940 Act, the Underlying Fund will not generally in turn invest in other registered investment companies in reliance on Section 12(d)(1)(G) or Section 12(d)(1)(F) of the 1940 Act, but may make such investments as may otherwise be made in accordance with applicable law, including in reliance on Rule 12d1-4.

The provisions of the 1940 Act may impose certain limitations on a Fund’s investments in other investment companies. In particular, each Fund’s investments in investment companies are limited to, subject to certain exceptions, (i) 3% of the total outstanding voting stock of any one investment company; (ii) 5% of the Fund’s total assets with respect to any one investment company; and (iii) 10% of the Fund’s total assets with respect to investment companies in the aggregate (the “**Fund-of-Funds Limitations**”). Rule 12d1-4 of the 1940 Act permits a Fund to invest in other investment companies beyond the Fund-of-Funds Limitations, subject to certain conditions. Under Rule 12d1-4, if shares of a Fund are purchased by another fund beyond the Fund-of-Funds Limitations, and the Fund invests in another investment company or private fund exempt from the definition of “investment company” under the 1940 Act by Sections 3(c)(1) or 3(c)(7) thereof, the Fund generally will not be able to make new investments in other funds or other such private funds, if, as a result of such investment, more than 10% of the Fund’s assets would be invested in other investment companies and other such private funds. In addition, an affiliated fund-of-funds’ investment in unaffiliated funds may be made only in accordance with Rule 12d1-4. These regulations may limit a Fund’s ability to pursue its principal investment strategies by investing in other investment companies or private funds or to invest in those investment companies or private funds it believes are most desirable, including, potentially, other Funds. Separately, certain Funds may limit or dispose of their investments in other investment companies and private funds in anticipation of, or to remain eligible investments for, investment by other Funds. Compliance with these regulations and the other matters discussed above may adversely affect a Fund’s performance.

Fixed-Income Securities. The Funds may invest in fixed-income securities. The Equities ETF is limited to fixed-income securities permitted by the Order, namely instruments issued or guaranteed by the U.S. government, its agencies and instrumentalities. Fixed-income securities include a broad array of short-, medium-, and long-term obligations issued by the U.S. or foreign governments, government or international agencies and instrumentalities, and corporate and private issuers of various types. The maturity date is the date on which a

fixed-income security matures. This is the date on which the borrower must pay back the borrowed amount, which is known as the principal. Some fixed-income securities represent uncollateralized obligations of their issuers; in other cases, the securities may be backed by specific assets (such as mortgages or other receivables) that have been set aside as collateral for the issuer's obligation. Fixed-income securities generally involve an obligation of the issuer to pay interest or dividends on either a current basis or at the maturity of the security, as well as the obligation to repay the principal amount of the security at maturity. The rate of interest on fixed-income securities may be fixed, floating, or variable. Some securities pay a higher interest rate than the current market rate. An investor may have to pay more than the security's principal to compensate the seller for the value of the higher interest rate. This additional payment is a premium.

Fixed-income securities are subject to, among other risks, credit risk, market risk, and interest rate risk. Except to the extent values are affected by other factors such as developments relating to a specific issuer, generally the value of a fixed-income security can be expected to rise when interest rates decline and, conversely, the value of such a security can be expected to fall when interest rates rise. Some fixed-income securities may be subject to extension risk. This is the risk that if interest rates rise, repayments of principal on certain debt securities, including, but not limited to, floating rate loans and mortgage-related securities, may occur at a slower rate than expected and the expected maturity of those securities could lengthen as a result. Some fixed-income securities also involve prepayment or call risk. This is the risk that the issuer will repay a Fund the principal on the security before it is due, thus depriving a Fund of a favorable stream of future interest or dividend payments. A Fund could buy another security, but that other security might pay a lower interest rate. In addition, many fixed-income securities contain call or buy-back features that permit their issuers to call or repurchase the securities from their holders. Such securities may present risks based on payment expectations. Although a Fund would typically receive a premium if an issuer were to redeem a security, if an issuer were to exercise a call option and redeem the security during times of declining interest rates, a Fund may realize a capital loss on its investment if the security was purchased at a premium and a Fund may be forced to replace the called security with a lower yielding security.

Changes by nationally recognized securities rating organizations ("NRSROs") in their ratings of any fixed-income security or the issuer of a fixed-income security and changes in the ability of an issuer to make payments of interest and principal may also affect the value of these investments. Changes in the value of portfolio securities generally will not affect income derived from these securities, but will affect a Fund's NAV.

Because interest rates vary, it is impossible to predict the income, if any, for any particular period for a Fund that invests in fixed-income securities. Fluctuations in the value of a Fund's investments in fixed-income securities will cause the NAV of each class of the Fund to fluctuate also.

Duration is an estimate of how much a bond's value will fluctuate in response to a change in interest rates. In general, the value of a fixed-income security with positive duration will generally decline if interest rates increase, whereas the value of a security with negative duration will generally decline if interest rates decrease. If interest rates rise by one percentage point, the share price of a Fund representing a portfolio of debt securities with an average duration of five years would be expected to decline by approximately 5%. If rates decrease by a percentage point, the share price of the Fund representing a portfolio of debt securities with an average duration of five years would be expected to rise by approximately 5%. The greater the duration of a bond (whether positive or negative), the greater its percentage price volatility due to changes in interest rates. Only a pure discount bond – that is, one with no coupon or sinking-fund payments – has a duration equal to the remaining maturity of the bond, because only in this case does the present value of the final redemption payment represent the entirety of the present value of the bond. For all other bonds, duration is less than maturity.

Each Fund may invest in variable- or floating-rate securities that bear interest at rates subject to periodic adjustment or provide for periodic recovery of principal on demand. Variable- and floating-rate securities may include, without limitations, floating rate notes issued by the U.S. Treasury, catastrophe and other event-linked bonds, bank capital securities, unsecured bank loans, corporate bonds, money market instruments and certain

types of mortgage-backed and other asset-backed securities. The value of a Fund's investment in certain of these securities may depend on a Fund's right to demand that a specified bank, broker-dealer, or other financial institution either purchase such securities from a Fund at par or make payment on short notice to a Fund of unpaid principal and/or interest on the securities. These securities are subject to, among others, interest rate risk and credit risk.

Each Fund may invest in commercial paper, which is a short-term debt obligation that is usually issued by banks, corporations, and other borrowers and often sold on a discount basis in order to finance their current operations. Commercial paper is typically bought by investors to earn returns on a short-term basis, and it is usually repaid at maturity by the issuer from the proceeds of the issuance of new commercial paper. As a result, investments in commercial paper are subject to the risk that the issuer cannot issue enough new commercial paper to satisfy its outstanding commercial paper, also known as rollover risk. In addition, under certain circumstances commercial paper may become illiquid or may suffer from reduced liquidity. These instruments are generally unsecured, which increases the credit risk associated with this type of investment.

Commercial paper purchasable by a Fund may include "Section 4(a)(2) paper," a term that includes debt obligations issued in reliance on the "private placement" exemption from registration afforded by Section 4(a)(2) of the Securities Act of 1933 (the "**Securities Act**"). Section 4(a)(2) paper is restricted as to disposition under the Federal securities laws, and is frequently sold (and resold) to institutional investors such as a Fund through or with the assistance of investment dealers who make a market in the Section 4(a)(2) paper, thereby providing liquidity. Section 4(a)(2) paper is sold to institutional investors who must agree to purchase the paper for investment and not with a view to public distribution. Any resale by the purchaser must be in a transaction exempt from the registration requirements of the Securities Act. Section 4(a)(2) paper normally is resold to other institutional investors like a Fund through or with the assistance of the issuer or investment dealers that make a market in Section 4(a)(2) paper. As a result it is subject to liquidity risk, the risk that the securities may be difficult to value because of the absence of an active market, and the risk that it may be sold only after considerable expense and delay, if at all. There can be no assurance that a liquid trading market will exist at any time for any particular Section 4(a)(2) paper securities.

A Fund also may purchase asset-backed commercial paper, which includes debt obligations issued in reliance on an exemption from registration available in Section 3(a)(3) of the Securities Act. Asset-backed commercial paper issued pursuant to Section 3(a)(3) must not have a maturity exceeding nine months. Asset-backed commercial paper is subject to similar liquidity risks associated with Section 4(a)(2) paper described in the paragraph above.

Generally, the Adviser uses the terms debt security, debt obligation, bond, fixed-income instrument and fixed-income security interchangeably. These terms should be considered to include any evidence of indebtedness, including, by way of example, a security or instrument having one or more of the following characteristics: a security or instrument issued at a discount to its face value, a security or instrument that pays interest at a fixed, floating, or variable rate, or a security or instrument with a stated principal amount that requires repayment of some or all of that principal amount to the holder of the security. These terms are interpreted broadly to include any instrument or security evidencing what is commonly referred to as an IOU rather than evidencing the corporate ownership of equity unless that equity represents an indirect or derivative interest in one or more debt securities. For this purpose, the terms also include instruments that are intended to provide one or more of the characteristics of a direct investment in one or more debt securities. As new fixed-income instruments are developed, the Adviser may invest in those opportunities for a Fund as well.

Foreign Currency Transactions. A Fund may engage in currency exchange transactions to protect against uncertainty in the level of future foreign currency exchange rates and to increase current return. There can be no assurance that appropriate foreign currency transactions will be available for a Fund at any time or that the Fund will enter into such transactions at any time or under any circumstances even if appropriate transactions are available to it. While foreign currency transactions may be available, the cost of these transactions may be prohibitively expensive so that a Fund may not be able to use them effectively.

Each Fund may engage in both transaction hedging and position hedging. When it engages in transaction hedging, the Fund enters into foreign currency transactions with respect to specific receivables or payables of a Fund generally arising in connection with the purchase or sale of its portfolio securities. Each Fund may engage in transaction hedging when it desires to lock in the U.S. dollar price of a security it has agreed to purchase or sell, or the U.S. dollar equivalent of a dividend or interest payment in a foreign currency. By transaction hedging, a Fund may attempt to protect against a possible loss resulting from an adverse change in the relationship between the U.S. dollar and the applicable foreign currency during the period between the date on which the security is purchased or sold or on which the dividend or interest payment is declared, and the date on which such payments are made or received.

Each Fund may purchase or sell a foreign currency on a spot (*i.e.*, cash) basis at the prevailing spot rate in connection with transaction hedging. Each Fund may also enter into contracts to purchase or sell foreign currencies at a future date (“**forward contracts**”) and purchase and sell foreign currency futures contracts.

For transaction hedging purposes, each Fund may also purchase exchange-listed and OTC call and put options on foreign currency futures contracts and on foreign currencies. A put option on a futures contract gives a Fund the right to assume a short position in the futures contract until or at the expiration of the option. A put option on currency gives a Fund the right to sell a currency at a specified exercise price until or at the expiration of the option. A call option on a futures contract gives a Fund the right to assume a long position in the futures contract until or at the expiration of the option. A call option on currency gives a Fund the right to purchase a currency at the exercise price until or at the expiration of the option. Each Fund will engage in OTC transactions only when appropriate exchange-traded transactions are unavailable and when, in the opinion of the Adviser, the pricing mechanism and liquidity are satisfactory and the participants are responsible parties likely to meet their contractual obligations.

The Funds may engage in foreign currency exchange transactions to protect against a decline in the values of the foreign currencies in which securities held by a Fund are denominated or are quoted in their principal trading markets or an increase in the value of currency for securities which a Fund expects to purchase. In connection with position hedging, a Fund may purchase put or call options on foreign currency and foreign currency futures contracts and buy or sell forward contracts and foreign currency futures contracts. Each Fund may also purchase or sell foreign currency on a spot basis.

The precise matching of the amounts of foreign currency exchange transactions and the value of the portfolio securities involved will not generally be possible since the future value of such securities in foreign currencies will change as a consequence of market movements in the values of those securities between the dates the currency exchange transactions are entered into and the dates they mature.

It is impossible to forecast with precision the market value of a Fund’s portfolio securities at the expiration or maturity of a forward or futures contract. Accordingly, it may be necessary for a Fund to purchase additional foreign currency on the spot market (and bear the expense of such purchase) if the market value of the security or securities being hedged is less than the amount of foreign currency a Fund is obligated to deliver and if a decision is made to sell the security or securities and make delivery of the foreign currency. Conversely, it may be necessary to sell on the spot market some of the foreign currency received upon the sale of the portfolio security or securities of a Fund if the market value of such security or securities exceeds the amount of foreign currency a Fund is obligated to deliver. To offset some of the costs of hedging against fluctuations in currency exchange rates, a Fund may write call options on those currencies.

Transaction and position hedging do not eliminate fluctuations in the underlying prices of the securities that a Fund owns or intends to purchase or sell. They simply establish a rate of exchange that one can achieve at some future point in time. Additionally, although these techniques tend to minimize the risk of loss due to a decline in the value of the hedged currency, they tend to limit any potential gain which might result from the increase in the value of such currency.

Each Fund may also seek to increase its current return by purchasing and selling foreign currency on a spot basis, by purchasing and selling futures contracts on foreign currencies and options on foreign currencies and on foreign currency futures contracts, and by purchasing and selling foreign currency forward contracts.

The value of any currency, including U.S. dollars and foreign currencies, may be affected by complex political, social, and economic factors applicable to the issuing country. In addition, the exchange rates of foreign currencies (and therefore the values of foreign currency options, forward contracts, and futures contracts) may be affected significantly, fixed, or supported directly or indirectly by U.S. and foreign government actions. Government intervention may increase risks involved in purchasing or selling foreign currency options, forward contracts, and futures contracts, since exchange rates may not be free to fluctuate in response to other market forces. Foreign governmental restrictions or taxes could result in adverse changes in the cost of acquiring or disposing of foreign currencies.

Currency Forward and Futures Contracts. A forward foreign currency exchange contract involves an obligation to purchase or sell a specific currency at a future date, which may be any fixed number of days from the date of the contract as agreed by the parties, at a price set at the time of the contract. In the case of a cancelable forward contract, the holder has the unilateral right to cancel the contract at maturity by paying a specified fee. The contracts are traded in the interbank market conducted directly between currency traders (usually large commercial banks) and their customers. A deliverable forward contract generally has no deposit requirement, and no commissions are charged at any stage for trades. A foreign currency futures contract is a standardized contract for the future delivery of a specified amount of a foreign currency at a future date at a price set at the time of the contract. Foreign currency futures contracts traded in the United States are designed by and traded on exchanges regulated by the CFTC, such as the New York Mercantile Exchange or Chicago Mercantile Exchange.

A Fund may enter into foreign currency forward contracts in order to protect against the risk that the U.S. dollar value of the Fund's dividends, interest, net realized capital gains, sales proceeds or investments denominated in foreign currency will decline, including to the extent of any devaluation of the currency during the intervals between (a) (i) the time the Fund becomes entitled to receive or receives dividends, interest, net realized capital gains or sales proceeds or (ii) the time an investor gives notice of a requested redemption of a certain amount and (b) the time such amount(s) are converted into U.S. dollars for remittance out of the particular country or countries.

Forward foreign currency exchange contracts differ from foreign currency futures contracts in certain respects. For example, the maturity date of a forward contract may be any fixed number of days from the date of the contract agreed upon by the parties, rather than a predetermined date in a given month. Forward contracts may be in any amounts agreed upon by the parties rather than predetermined amounts. Also, forward foreign exchange contracts are traded directly between currency traders so that no intermediary is required. A deliverable forward contract generally requires no margin or other deposit.

At the maturity of a forward or futures contract, generally a Fund may either accept or make delivery of the currency specified in the contract, or at or prior to maturity enter into a closing transaction involving the purchase or sale of an offsetting contract. Closing transactions with respect to forward contracts are usually effected with the currency trader who is a party to the original forward contract. Closing transactions with respect to futures contracts are effected on a commodities exchange; a clearing corporation associated with the exchange assumes responsibility for closing out such contracts.

Positions in foreign currency futures contracts and related options may be closed out only on an exchange or board of trade which provides a market in such contracts or options. Although a Fund will normally purchase or sell foreign currency futures contracts and related options only on exchanges or boards of trade where there appears to be an active market, there is no assurance that a market on an exchange or board of trade will exist for any particular contract or option or at any particular time. In such event, it may not be possible to close a futures or related option position and, in the event of adverse price movements, a Fund would continue to be required to make daily cash payments of variation margin on its futures positions.

Foreign Currency Options. Options on foreign currencies operate similarly to options on securities, and are traded primarily in the OTC market, although options on foreign currencies are listed on several exchanges. Such options will be purchased or written only when the Adviser believes that a liquid secondary market exists for such options. There can be no assurance that a liquid secondary market will exist for a particular option at any specific time. Options on foreign currencies are affected by all of those factors which influence exchange rates and investments generally.

The value of a foreign currency option is dependent upon the value of the foreign currency and the U.S. dollar, and may have no relationship to the investment merits of a foreign security. Because foreign currency transactions occurring in the interbank market involve substantially larger amounts than those that may be involved in the use of foreign currency options, investors may be disadvantaged by having to deal in an odd lot market (generally consisting of transactions of less than \$1 million) for the underlying foreign currencies at prices that are less favorable than for round lots.

There is no systematic reporting of last-sale information for foreign currencies and there is no regulatory requirement that quotations available through dealers or other market sources be firm or revised on a timely basis. Available quotation information is generally representative of very large transactions in the interbank market and thus may not reflect relatively smaller transactions (less than \$1 million) where rates may be less favorable. The interbank market in foreign currencies is a global, around-the-clock market. To the extent that the U.S. options markets are closed while the markets for the underlying currencies remain open, significant price and rate movements may take place in the underlying markets that cannot be reflected in the U.S. options markets.

Foreign Currency Conversion. Although foreign exchange dealers do not charge a fee for currency conversion, they do realize a profit based on the difference (the “**spread**”) between prices at which they buy and sell various currencies. Thus, a dealer may offer to sell a foreign currency to a Fund at one rate, while offering a lesser rate of exchange should the Fund desire to resell that currency to the dealer.

Foreign Currency Exchange-Related Securities

Foreign Currency Warrants. Foreign currency warrants such as Currency Exchange WarrantsSM are warrants which entitle the holder to receive from their issuer an amount of cash (generally, for warrants issued in the United States, in U.S. dollars) which is calculated pursuant to a predetermined formula and based on the exchange rate between a specified foreign currency and the U.S. dollar as of the exercise date of the warrant. Foreign currency warrants generally are exercisable upon their issuance and expire as of a specified date and time. Foreign currency warrants have been issued in connection with U.S. dollar-denominated debt offerings by major corporate issuers in an attempt to reduce the foreign currency exchange risk which, from the point of view of prospective purchasers of the securities, is inherent in the international fixed-income marketplace. Foreign currency warrants may reduce the foreign exchange risk assumed by purchasers of a security by, for example, providing for a supplemental payment in the event that the U.S. dollar depreciates against the value of a major foreign currency such as the Japanese yen or the euro. The formula used to determine the amount payable upon exercise of a foreign currency warrant may make the warrant worthless unless the applicable foreign currency exchange rate moves in a particular direction (*e.g.*, unless the U.S. dollar appreciates or depreciates against the particular foreign currency to which the warrant is linked or indexed). Foreign currency warrants are severable from the debt obligations with which they may be offered, and may be listed on exchanges. Foreign currency warrants may be exercisable only in certain minimum amounts, and an investor wishing to exercise warrants who possesses less than the minimum number required for exercise may be required either to sell the warrants or to purchase additional warrants, thereby incurring additional transaction costs. In the case of any exercise of warrants, there may be a time delay between the time a holder of warrants gives instructions to exercise and the time the exchange rate relating to exercise is determined, during which time the exchange rate could change significantly, thereby affecting both the market and cash settlement values of the warrants being exercised. The expiration date of the warrants may be accelerated if the warrants should be delisted from an exchange or if their

trading should be suspended permanently, which would result in the loss of any remaining “time value” of the warrants (*i.e.*, the difference between the current market value and the exercise value of the warrants), and, in the case the warrants were “out-of-the-money,” in a total loss of the purchase price of the warrants. Warrants are generally unsecured obligations of their issuers and are not standardized foreign currency options issued by the Options Clearing Corporation (“OCC”). Unlike foreign currency options issued by OCC, the terms of foreign exchange warrants generally will not be amended in the event of governmental or regulatory actions affecting exchange rates or in the event of the imposition of other regulatory controls affecting the international currency markets. The initial public offering price of foreign currency warrants is generally considerably in excess of the price that a commercial user of foreign currencies might pay in the interbank market for a comparable option involving significantly larger amounts of foreign currencies. Foreign currency warrants are subject to significant foreign exchange risk, including risks arising from complex political or economic factors.

Principal Exchange Rate Linked Securities. Principal exchange rate linked securities (“**PERLS**SM”) are debt obligations the principal on which is payable at maturity in an amount that may vary based on the exchange rate between the U.S. dollar and a particular foreign currency at or about that time. The return on “standard” principal exchange rate linked securities is enhanced if the foreign currency to which the security is linked appreciates against the U.S. dollar, and is adversely affected by increases in the foreign exchange value of the U.S. dollar; “reverse” principal exchange rate linked securities are like the “standard” securities, except that their return is enhanced by increases in the value of the U.S. dollar and adversely impacted by increases in the value of foreign currency. Interest payments on the securities are generally made in U.S. dollars at rates that reflect the degree of foreign currency risk assumed or given up by the purchaser of the notes (*i.e.*, at relatively higher interest rates if the purchaser has assumed some of the foreign exchange risk, or relatively lower interest rates if the issuer has assumed some of the foreign exchange risk, based on the expectations of the current market). PERLS may in limited cases be subject to acceleration of maturity (generally, not without the consent of the holders of the securities), which may have an adverse impact on the value of the principal payment to be made at maturity.

Performance Indexed Paper. Performance indexed paper is U.S. dollar-denominated commercial paper the yield of which is linked to certain foreign exchange rate movements. The yield to the investor on performance indexed paper is established at maturity as a function of spot exchange rates between the U.S. dollar and a designated currency as of or about that time (generally, the index maturity two days prior to maturity). The yield to the investor will be within a range stipulated at the time of purchase of the obligation, generally with a guaranteed minimum rate of return that is below, and a potential maximum rate of return that is above, market yields on U.S. dollar-denominated commercial paper, with both the minimum and maximum rates of return on the investment corresponding to the minimum and maximum values of the spot exchange rate two business days prior to maturity.

Foreign Investments and Related Risks. A Fund may invest in securities issued by a foreign issuer or by an issuer with significant revenue or other exposure to foreign markets. There may be less information publicly available about a foreign market, issuer, or security than about U.S. markets or a U.S. issuer or security, and foreign issuers may not be subject to accounting, auditing and financial reporting standards and practices comparable to those in the United States. In addition, there may be less (or less effective) regulation of exchanges, brokers and listed companies in some foreign countries. The securities of some foreign issuers are less liquid and at times more volatile than securities of comparable U.S. issuers. Foreign brokerage commissions, custodial expenses and other fees are also generally higher than in the United States.

Foreign settlement procedures and trade regulations may be more complex and involve certain risks (such as delay in payment or delivery of securities or in the recovery of a Fund’s assets held abroad) and expenses not present in the settlement of investments in U.S. markets. For example, settlement of transactions involving foreign securities or foreign currencies (see below) may occur within a foreign country, and a Fund may accept or make delivery of the underlying securities or currency in conformity with any applicable U.S. or foreign restrictions or regulations, and may pay fees, taxes or charges associated with such delivery. In addition, local market holidays or other factors may extend the time for settlement of purchases and sales of a Fund’s

investments in securities that trade on foreign markets. Such investments may also involve the risk that an entity involved in the settlement may not meet its obligations. Extended settlement cycles or other delays in settlement may increase a Fund's liquidity risk and require the Fund to employ alternative methods (*e.g.*, through borrowings) to satisfy redemption requests during periods of large redemption activity in Fund shares.

In addition, foreign securities may be subject to the risk of nationalization or expropriation of assets, imposition of currency exchange controls, foreign withholding or other taxes or restrictions on the repatriation of foreign currency, confiscatory taxation, political, social or financial instability and diplomatic developments which could affect the value of a Fund's investments in certain foreign countries. Dividends or interest on, or proceeds from the sale of, foreign securities may be subject to foreign withholding or other taxes, and special U.S. tax considerations may apply.

Foreign issuers may become subject to sanctions imposed by the U.S. or another country or other governmental or non-governmental organizations, which could result in the immediate freeze of the foreign issuers' assets or securities and/or make their securities worthless. The imposition of such sanctions, such as sanctions imposed against Russia, Russian entities and Russian individuals in 2022 and 2023, could impair the market value of the securities of such foreign issuers and limit a Fund's ability to buy, sell, receive or deliver the securities. Sanctions, or the threat of sanctions, may cause volatility in regional and global markets and may negatively impact the performance of various sectors and industries, as well as companies in other countries, which could have a negative effect on the performance of such Fund.

Legal remedies available to investors in certain foreign countries may be more limited than those available with respect to investments in the United States or in other foreign countries. The laws of some foreign countries may limit a Fund's ability to invest in securities of certain issuers organized under the laws of those foreign countries. For example, certain countries may require governmental approval prior to investments by foreign persons or limit the amount of investment by foreign persons in a particular company. Certain countries may also limit investment by foreign persons to only a specific class of securities that may have less advantageous terms, and such securities may be less liquid than other classes of securities of an issuer.

To the extent a Fund invests a significant portion of its assets in a specific geographic region, countries or group of countries, the Fund will have greater exposure to risks associated with such region, country or group of countries. See "Risk Considerations – Focused Investment Risk" in this SAI.

The risks described above, including the risks of nationalization or expropriation of assets, typically are increased in connection with investments in developing countries, also known as emerging markets. For example, political and economic structures in these countries may be in their infancy and developing rapidly, and such countries may lack the social, political and economic stability characteristic of more developed countries. Certain of these countries have in the past failed to recognize private property rights and have at times nationalized and expropriated the assets of private companies. In addition, the economies of certain developing or emerging market countries may be dependent on a single industry or limited group of industries, which may increase the risks described above and make those countries particularly vulnerable to global economic and market changes.

There may also be limited counterparties available in developing markets, which may increase a Fund's credit risks. Foreign government regulations may restrict potential counterparties to certain financial institutions that are located in or operating in a particular country. Such counterparties may not possess creditworthiness standards, financial reporting standards, and legal protections similar to counterparties located in developed markets, which can increase the risk associated with a Fund's investments in such markets.

The values of foreign securities may be adversely affected by changes in currency exchange rates. This may be because the foreign securities are denominated and/or traded in a foreign currency or because the assets or revenues of an issuer are denominated in a currency different from the issuer's debt or other obligations. For example, the credit quality of issuers who have outstanding debt denominated in the U.S. dollar, and the values

of their debt obligations, may be adversely affected if the value of the U.S. dollar strengthens relative to the value of the currency in which the issuer's assets or revenues are denominated. In addition, each Fund is required to compute and distribute its income in U.S. dollars. Therefore, if the exchange rate for a foreign currency declines after a Fund's income has been earned and translated into U.S. dollars (but before payment), a Fund could be required to liquidate portfolio securities to make such distributions. Similarly, if an exchange rate declines between the time a Fund incurs expenses in U.S. dollars and the time such expenses are paid, the amount of such currency required to be converted into U.S. dollars in order to pay such expenses in U.S. dollars will be greater than the equivalent amount in any such currency of such expenses at the time they were incurred. High rates of inflation or currency devaluations may adversely affect the economies and securities markets of such countries and the values of a Fund's investments in those markets. A foreign government may seek to devalue its currency if it has issued debt in its local currency because any such devaluation reduces the burden on it of repaying its debt obligations. Any devaluation of a currency in which a Fund's portfolio holdings are denominated will reduce the value of and return on the investment to the Fund when translated into U.S. dollars.

Continuing uncertainty as to the status of the European Economic and Monetary Union ("**EMU**") and the potential for certain countries to withdraw from the institution has created significant volatility in currency and financial markets generally. Any partial or complete dissolution of the European Union (the "**EU**") could have significant adverse effects on currency and financial markets, and on the values of a Fund's portfolio investments. On January 31, 2020 the UK left the EU (commonly known as "**Brexit**"). An agreement between the UK and the EU governing their future trade relationship became effective January 1, 2021, but critical aspects of the relationship remain unresolved and subject to further negotiation and agreement. Brexit has resulted in volatility in European and global markets and could have negative long-term impacts on financial markets in the UK and throughout Europe. There is still considerable uncertainty relating to the potential consequences of the exit and whether the UK's exit will increase the likelihood of other countries also departing the EU. During this period of uncertainty, the negative impact on not only the UK and European economies, but the broader global economy, could be significant, potentially resulting in increased market volatility and illiquidity, political, economic, and legal uncertainty, and lower economic growth for companies that rely significantly on Europe for their business activities and revenues. Any further exits from the EU, or the possibility of such exits, or the abandonment of the euro, may cause additional market disruption globally and introduce new legal and regulatory uncertainties.

If one or more EMU countries were to stop using the euro as its primary currency, a Fund's investments in such countries may be redenominated into a different or newly adopted currency, possibly resulting in the value of those investments declining significantly and unpredictably. In addition, securities or other investments that are redenominated may be subject to liquidity risk and the risk that the Funds may not be able to value investments accurately to a greater extent than similar investments currently denominated in euros. To the extent a currency used for redenomination purposes is not specified in respect of certain EMU-related investments, or should the euro cease to be used entirely, the currency in which such investments are denominated may be unclear, making such investments particularly difficult to value or dispose of. A Fund may incur additional expenses to the extent it is required to seek judicial or other clarification of the denomination or value of such securities.

The currencies of certain emerging market countries have sometimes experienced devaluations relative to the U.S. dollar, and future devaluations may adversely affect the value of assets denominated in such currencies. Many emerging market countries have experienced substantial, and in some periods extremely high, rates of inflation or deflation for many years, and future inflation may adversely affect the economies and securities markets of such countries. When debt and similar obligations issued by foreign issuers are denominated in a currency (*e.g.*, the U.S. dollar or the euro) other than the local currency of the issuer, the subsequent strengthening of the non-local currency against the local currency will generally increase the burden of repayment on the issuer and may increase significantly the risk of default by the issuer.

In addition, unanticipated political or social developments may affect the value of investments in emerging markets and the availability of additional investments in these markets. The small size, limited trading volume

and relative inexperience of the securities markets in these countries may make investments in securities traded in emerging markets illiquid and more volatile than investments in securities traded in more developed countries, and a Fund may be required to establish special custodial or other arrangements before making investments in securities traded in emerging markets. There may be little financial or accounting information available with respect to issuers of emerging market securities, and it may be difficult as a result to assess the value or prospects of an investment in such securities.

American Depositary Receipts (“**ADRs**”) as well as other hybrid forms of ADRs, including European Depositary Receipts (“**EDRs**”) and Global Depositary Receipts (“**GDRs**”), are certificates evidencing ownership of shares of a foreign issuer. These certificates are issued by depositary banks and generally trade on an established market in the United States or elsewhere. The underlying shares are held in trust by a custodian bank or similar financial institution in the issuer’s home country. The depositary bank may not have physical custody of the underlying securities at all times and may charge fees for various services, including forwarding dividends and interest and corporate actions. ADRs are alternatives to directly purchasing the underlying foreign securities in their national markets and currencies. However, ADRs continue to be subject to many of the risks associated with investing in foreign securities. In addition to investment risks associated with the underlying issuer, ADRs, EDRs, and GDRs (together, “**Depositary Receipts**”) expose the Funds to additional risks associated with the non-uniform terms that apply to Depositary Receipt programs, credit exposure to the depositary bank and to the sponsors and other parties with whom the depositary bank establishes the programs, currency risk and the risk of an illiquid market for Depositary Receipts. Unsponsored ADR, EDR and GDR programs are organized independently and without the cooperation of the issuer of the underlying securities. Unsponsored programs generally expose investors to greater risks than sponsored programs and do not provide holders with many of the shareholder benefits that come from investing in a sponsored Depositary Receipt. As a result, available information concerning the issuer may not be as current as for sponsored ADRs, EDRs and GDRs, and the prices of unsponsored ADRs, EDRs and GDRs may be more volatile than if such instruments were sponsored by the issuer. Depositary Receipts are generally subject to the same risks as the foreign securities that they evidence or into which they may be converted.

Foreign securities and emerging markets securities include Global Depositary Notes (“**GDNs**”). A GDN is a debt instrument created by a bank that evidences ownership of local currency-denominated debt securities. GDNs reflect the terms of particular local currency-denominated bonds. GDNs trade, settle, and pay interest and principal in U.S. dollars but typically are restricted securities that do not trade on an exchange. Any distributions paid to the holders of GDNs are usually subject to a fee charged by the depositary bank. In addition to the risks associated with foreign investments, the Funds’ investments in GDNs are subject to the risks associated with the underlying local currency-denominated bond and derivative instruments including credit risk, default risk, counterparty risk, interest rate risk, leverage risk, liquidity risk, and reliance on the adviser risk. Holders of GDNs may have limited rights, and investment restrictions in certain countries may adversely impact the value of GDNs because such restrictions may limit the ability to convert the bonds into GDNs and vice versa. Such restrictions may cause bonds of the underlying issuer to trade at a discount or premium to the market price of the GDN.

Certain of the foregoing risks may also apply to some extent to securities of U.S. issuers that are denominated in foreign currencies or that are traded in foreign markets, or securities of U.S. issuers having significant foreign operations or other exposure to foreign markets. If a Fund invests in securities issued by foreign issuers, the Fund may be subject to the risks described above even if the Fund’s investment is denominated in United States dollars, especially with respect to issuers whose revenues are principally earned in a foreign currency but whose debt obligations have been issued in United States dollars or other hard currencies.

Non-U.S. Sub-Custodians. Rules adopted under the 1940 Act permit a Fund to maintain its non-U.S. securities and cash in the custody of certain eligible non-U.S. banks and securities depositories.

Certain banks in non-U.S. countries may not be eligible sub-custodians for a Fund, in which event the Fund may be precluded from purchasing securities in certain non-U.S. countries in which it otherwise would invest or

which may result in a Fund incurring additional costs and delays in providing transportation and custody services for such securities outside of such countries. A Fund may encounter difficulties in effecting on a timely basis portfolio transactions with respect to any securities of issuers held outside their countries. Other banks that are eligible non-U.S. sub-custodians may be recently organized or otherwise lack extensive operating experience. In addition, in certain countries there may be legal restrictions or limitations on the ability of a Fund to recover assets held in custody by non-U.S. sub-custodians in the event of the bankruptcy of the sub-custodian.

Futures Contracts. A Fixed Income Fund may purchase and sell (write) futures contracts, including interest rate futures and security index futures contracts, futures contracts on commodities or commodity-related derivatives, Treasury futures, currency and currency index futures contracts, provided that, with respect to futures on security indices and currencies, the securities and currencies underlying the futures contract are eligible for purchase by the Fund (each a “**futures contract**”). In accordance with the Order, the Equities ETF may only invest in futures contracts that are listed on a U.S. exchange that trades contemporaneously with the Fund’s shares and whose reference asset is an asset in which the Equities ETF may invest directly or, if an index futures contract, based on an index of the type of asset in which the Equities ETF may invest directly.

Securities index futures contracts, which are contracts to buy or sell units of a securities index at a specified future date at a price agreed upon when the contract is made, are based on a specific index of securities (rather than on specified securities) and are settled in cash.

The following example illustrates generally the manner in which index futures contracts operate. The Standard & Poor’s 100 Stock Index (the “**S&P 100 Index**”) is composed of 100 selected common stocks, most of which are listed on the New York Stock Exchange (the “**NYSE**”). The S&P 100 Index assigns relative weightings to the common stocks included in that index, and the index fluctuates with changes in the market values of those common stocks. In the case of the S&P 100 Index, contracts are to buy or sell 100 units. Thus, if the value of the S&P 100 Index were \$180, one contract would be worth \$18,000 (100 units x \$180). The stock index futures contract specifies that no delivery of the actual stocks making up the index will take place. Instead, settlement in cash must occur upon the termination of the contract, with the settlement being the difference between the contract price and the actual level of the stock index at the expiration of the contract. For example, if a Fund enters into a futures contract to buy 100 units of the S&P 100 Index at a specified future date at a contract price of \$180 and the S&P 100 Index is at \$184 on that future date, the Fund will gain \$400 (100 units x gain of \$4). If a Fund enters into a futures contract to sell 100 units of the stock index at a specified future date at a contract price of \$180 and the S&P 100 Index is at \$182 on that future date, the Fund will lose \$200 (100 units x loss of \$2).

Positions in index futures may be established or closed out only on the exchange or board of trade on which such futures contract is listed.

Treasury futures are futures contracts that track the prices of specific U.S. Treasury securities.

A Fund may purchase or sell interest rate futures for the purpose of hedging some or all of the value of its portfolio securities against changes in prevailing interest rates or to manage its duration or effective maturity. If an increase in interest rates is anticipated and, concomitantly, the price of certain of a Fund’s portfolio securities may fall, the Fund may sell futures contracts. If declining interest rates are anticipated, the Fund may purchase futures contracts to protect against a potential increase in the price of securities the Fund intends to purchase. Subsequently, appropriate securities may be purchased by a Fund in an orderly fashion; as securities are purchased, corresponding futures positions would be terminated by offsetting sales of contracts.

In order to hedge its investments successfully using futures contracts, a Fund must invest in futures contracts with respect to securities, indexes, sub-indexes, or other assets the movements of which will, in the Adviser’s judgment, have a significant correlation with movements in the prices of the Fund’s portfolio investments.

There are special risks associated with entering into futures contracts. The skills needed to use futures contracts effectively are different from those needed to select a Fund's investments. There may be an imperfect correlation between the price movements of futures contracts and the price movements of the assets in which a Fund invests. There is also a risk that a Fund will be unable to close a futures position when desired because there is no liquid market for it.

The risk of loss in trading futures contracts can be substantial due to the low margin deposits required and the extremely high degree of leverage involved in futures pricing. Relatively small price movements in a futures contract could have an immediate and substantial impact, which may be favorable or unfavorable to a Fund. It is possible for a price-related loss to exceed the amount of a Fund's margin deposit.

Although some futures contracts by their terms call for the actual delivery or acquisition of the underlying asset at expiration, in most cases the contractual commitment is closed out before expiration. The offsetting of a contractual obligation is accomplished by purchasing (or selling as the case may be) on a commodities or futures exchange an identical futures contract calling for delivery in the same month. Such a transaction, if effected through a member of an exchange, cancels the obligation to make or take delivery of the underlying asset. A Fund will incur brokerage fees when it purchases or sells futures contracts, and will be required to maintain margin deposits. If a liquid market does not exist when a Fund wishes to close out a futures contract, it will not be able to do so and will continue to be required to make daily cash payments of variation margin in the event of adverse price movements. There is no assurance that a Fund will be able to enter into closing transactions.

The Funds may enter into futures contracts on underlying assets, including physical commodities and indexes of physical commodities.

At any time prior to expiration of a futures contract, a Fund may seek to close the position by taking an opposite position which would typically operate to terminate a Fund's position in the futures contract. A final determination of any variation margin is then made, additional cash is required to be paid by or released to a Fund and a Fund realizes a loss or gain.

Margin Payments. When a Fund purchases or sells (writes) a futures contract, it is required to deposit with its broker an amount of cash, U.S. Treasury bills, or other permissible collateral equal to a percentage of the amount of the futures contract. This amount is known as initial margin. Initial margin requirements are established by the exchanges on which futures contracts trade and may, from time to time, change. The nature of initial margin is different from that of margin in security transactions in that it does not involve borrowing money to finance transactions. Rather, initial margin is similar to a performance bond or good faith deposit that is returned to a Fund upon termination of the contract, assuming a Fund satisfies its contractual obligations. In addition, brokers may establish margin deposit requirements in excess of those required by the exchanges.

Subsequent payments to and from the broker occur on a daily basis in a process known as marking to market. These payments are called variation margin and are made as the value of the underlying futures contract fluctuates. For example, when a Fund sells a futures contract and the price of the underlying index rises above the delivery price, that Fund's position declines in value. The Fund then pays the broker a variation margin payment equal to the difference between the delivery price of the futures contract and the value of the index underlying the futures contract. Conversely, if the price of the underlying index falls below the delivery price of the contract, a Fund's futures position increases in value. The broker then must make a variation margin payment equal to the difference between the delivery price of the futures contract and the value of the index underlying the futures contract.

When a Fund terminates a position in a futures contract, a final determination of variation margin is made, additional cash is paid by or to the Fund, and the Fund realizes a loss or a gain. Such closing transactions involve additional commission costs.

Options on Futures Contracts. Each Fixed Income Fund may purchase and sell/write call and put options on futures contracts. An option on a futures contract gives the purchaser the right, in return for the premium paid, to assume a position in a futures contract (a long position if the option is a call or a short position if the option is a put) at a specified exercise price during the exercisable period of the option. Upon exercise of the option, the holder would assume the underlying futures position and would receive a variation margin payment of cash or securities approximating the increase in the value of the holder's option position. If an option is exercised on the last trading day prior to the expiration date of the futures contract, the settlement will be made entirely in cash based on the difference between the exercise price of the option and the closing price of the futures contract on the expiration date. Purchasers of options who fail to exercise their options prior to the expiration date suffer a loss of the premium paid.

Special Risks of Transactions in Futures Contracts and Related Options. Investments in futures contracts involve risks and may result in losses in excess of the amount invested in the futures contracts. See "Futures Contracts and Options on Futures" under "Risk Considerations" in this SAI as well as the following description of risks.

Liquidity Risks. Positions in futures contracts may be closed out only on an exchange or board of trade which provides a market for such futures. Although a Fund may intend to purchase or sell futures only on exchanges or boards of trade where there appears to be an active market, there is no assurance that a liquid market on an exchange or board of trade will exist for any particular contract or at any particular time. If there is not a liquid market at a particular time, it may not be possible to close a futures position at such time and, in the event of adverse price movements, a Fund would continue to be required to make daily cash payments of variation margin. However, in the event futures contracts are used to hedge portfolio securities, such securities will not generally be sold until the futures contracts can be terminated. In such circumstances, if there is an increase in the price of the portfolio securities, such increase may partially or completely offset losses on the futures contracts.

The ability to establish and close out positions in options on futures contracts will be subject to the development and maintenance of a liquid market. It is not certain that such a market will develop. Although a Fund generally will purchase only those options for which there appears to be an active market, there is no assurance that a liquid market will exist for any particular option or at any particular time. In the event no such market exists for particular options, it might not be possible to effect closing transactions in such options, with the result that a Fund would have to exercise the options in order to realize any profit.

Hedging Risks. There are several risks in connection with the use by a Fund of futures contracts and related options as a hedging device. If a futures contract is used for hedging, an imperfect correlation between movements in the price of the futures contract and the price of the security, currency, or other investment being hedged creates risk. Correlation is higher when the investment being hedged underlies the futures contract. Correlation is lower when the investment being hedged is different than the security, currency, or other investment underlying the futures contract, such as when a futures contract on an index of securities or commodities is used to hedge a single security or commodity, a futures contract on one security is used to hedge a different security, or when a futures contract in one currency is used to hedge a security denominated in another currency.

Successful use of futures contracts and options by a Fund for hedging purposes is dependent upon correctly predicting movements in the direction of the market. Forecasting market movements is extremely difficult, and whether any hedging strategy will be successful is highly uncertain. It is possible that, where a Fund has purchased puts on futures contracts to hedge its portfolio against a decline in the market, the securities or index on which the puts are purchased may increase in value and the value of securities held in the portfolio may decline. If this occurred, the Fund would lose money on the puts and also experience a decline in the value of its portfolio securities. A Fund may also purchase futures contracts (or options on them) as an anticipatory hedge against a possible increase in the price of a currency in which securities the Fund anticipates purchasing is denominated. In such instances, the currency may instead decline. If a Fund does not then invest in those securities, the Fund may realize a loss on the futures contract that is not offset by a reduction in the price of the

securities purchased. In addition, the prices of futures, for a number of reasons, may not correlate perfectly with movements in the underlying securities or index due to certain market distortions. First, all participants in the futures market are subject to margin deposit requirements. Such requirements may cause investors to close futures contracts through offsetting transactions which could distort the normal relationship between the underlying security or index and futures markets. Second, the margin requirements in the futures markets are less onerous than margin requirements in the securities markets in general, and as a result the futures markets may attract more speculators than the securities markets do. Increased participation by speculators in the futures markets may also cause temporary price distortions. Due to the possibility of price distortion, even a correct forecast of general market trends by the Adviser still may not result in a successful hedging transaction over a very short time period.

Other Risks. A Fund will incur brokerage fees in connection with its futures and options transactions. In addition, while futures contracts and options on futures will be purchased and sold to reduce certain risks, those transactions themselves entail certain other risks. Thus, while a Fund may benefit from the use of futures and related options, unanticipated changes in interest rates or stock price movements may result in a poorer overall performance for the Fund than if it had not entered into any futures contracts or options transactions. Moreover, in the event of an imperfect correlation between the futures position and the portfolio position that is intended to be protected, the desired protection may not be obtained and a Fund may be exposed to risk of loss.

The risks associated with purchasing and writing put and call options on futures contracts is influenced by the market for futures contracts. An increase in the market value of a futures contract on which a Fund has written an option may cause the option to be exercised. In this situation, the benefit to a Fund would be limited to the value of the exercise price of the option and, if the Fund closes out the option, the cost of entering into the offsetting transaction could exceed the premium the Fund initially received for writing the option. In addition, a Fund's ability to enter into an offsetting transaction depends upon the market's demand for such futures contracts. If a purchased option expires unexercised, a Fund would realize a loss in the amount of the premium paid for the option.

Funds that invest in futures contracts may be subject to risks related to rolling. When investing in futures contracts, a Fund may seek to "roll" its futures positions rather than hold them through expiration. In some circumstances, the prices of futures contracts with near-term expirations are lower than the prices of similar futures contracts with longer-term expirations, resulting in a cost to "roll" the futures contracts. The actual realization of a potential roll cost will depend on the difference in prices of futures contracts with near- and longer-term expirations, and the rolling of futures positions may result in losses to a Fund.

The Adviser has claimed an exclusion from the definition of the term "commodity pool operator" ("**CPO**") under the Commodity Exchange Act ("**CEA**") pursuant to CFTC Rule 4.5 (the "**Exclusion**") with respect to the Funds. Accordingly, the Adviser currently is not subject to registration or regulation as a CPO under the CEA. The Adviser currently expects to operate the Funds in a manner that would permit the Adviser to continue to rely on the Exclusion, which may adversely affect its ability to manage the Funds under certain market conditions and may adversely affect the Funds' total returns. In the event the Adviser becomes unable to rely on the Exclusion with respect to a Fund and is required to register with the CFTC as a CPO with respect to such Fund, the relevant Fund's expenses may increase and the relevant Funds may be adversely affected and the CPO of shareholders that are pooled investment vehicles may be unable to rely on certain exemptions from CPO registration. The Funds may be limited in their ability to use futures and options on futures and to engage in certain swaps transactions during any period where the Adviser is not registered as a CPO with respect to the Funds. Such limitations are not expected to affect the normal operations of the Funds.

Subject to certain limitations, a Fund may enter into futures contracts or options on such contracts to attempt to protect against possible changes in the market value of securities held in or to be purchased by the Fund resulting from interest rate or market fluctuations, to protect the Fund's unrealized gains in the value of its portfolio securities, to facilitate the sale of such securities for investment purposes, to manage its effective maturity or duration, or to establish a position in the derivatives markets as a temporary substitute for purchasing or selling particular securities.

Litigation. The Funds or the Adviser on behalf of the Funds may participate in bankruptcy, insolvency or other similar proceedings relating to securities held by the Funds and join creditors' committees to preserve and pursue the Funds' rights. Further, the Adviser or the Funds may, on occasion, initiate litigation against an issuer or related parties in connection with securities presently or previously held by a Fund (whether by opting out of an existing class action lawsuit or otherwise). There can be no assurance of any recovery in any such proceeding and there may be significant delay in achieving any recovery. The Funds will bear their own costs in pursuing such actions, including, potentially, retaining counsel to represent the Funds on a contingency or other fee basis. The Funds may encounter substantial difficulties in obtaining and enforcing judgments against individuals and companies located in certain foreign jurisdictions. It may be difficult or impossible to obtain or enforce remedies against governments, their agencies and sponsored entities. A Fund could be subject to claims against it and any litigation it pursues could result in counterclaims against it, all of which could adversely affect the Fund.

Loans. The Equities ETF may engage in loan transactions but, in accordance with the Order, the Equities ETF may not borrow for investment purposes.

Money Market Instruments. The Funds may invest in money market instruments. These instruments include, but are not limited to instruments listed below. Of the instruments described, only the Fixed Income Funds can invest in bank obligations, Eurodollar certificates of deposit, obligations of savings institutions, fully insured certificates of deposit, and other short-term obligations.

U.S. Government Securities. Obligations issued or guaranteed as to principal and interest by the United States or its agencies (such as the Export-Import Bank of the United States, Federal Housing Administration and Government National Mortgage Association) or its instrumentalities (such as the Federal Home Loan Bank), including Treasury bills, notes and bonds.

Bank Obligations (Fixed Income Funds only). Obligations including certificates of deposit, fixed time deposits and bankers' acceptances, commercial paper (see below) and other debt obligations of banks subject to regulation by the U.S. government and having total assets of \$1 billion or more, and instruments secured by such obligations, not including obligations of foreign branches of domestic banks except as permitted below.

Eurodollar Certificates of Deposit (Fixed Income Funds only). Eurodollar certificates of deposit issued by foreign branches of domestic banks having total assets of \$1 billion or more (investments in Eurodollar certificates may be affected by changes in currency rates or exchange control regulations, or changes in governmental administration or economic or monetary policy in the United States and abroad).

Obligations of Savings Institutions (Fixed Income Funds only). Certificates of deposit of savings banks and savings and loan associations, having total assets of \$1 billion or more (investments in savings institutions above \$100,000 in principal amount are not protected by federal deposit insurance).

Fully Insured Certificates of Deposit (Fixed Income Funds only). Certificates of deposit of banks and savings institutions, having total assets of less than \$1 billion, if the principal amount of the obligation is insured by the Bank Insurance Fund or the Savings Association Insurance Fund (each of which is administered by the Federal Deposit Insurance Corporation), limited to \$250,000 principal amount per certificate and to 15% or less of a Fund's net assets in all such obligations and in all illiquid assets, in the aggregate.

Commercial Paper. Each Fund may purchase commercial paper rated within the highest ratings categories by S&P Global Ratings ("S&P") or Moody's Investors Service, Inc. ("Moody's") or the equivalent by any other NRSRO or, if not rated, the security is determined by the Adviser to be of comparable quality (see "—Fixed Income Securities" above for more information regarding commercial paper).

Money Market Mutual Funds. Shares of United States money market investment companies. Money market mutual funds in which a Fund may invest are subject to Rule 2a-7 of the 1940 Act, and invest in a variety of

short-term, high quality, dollar-denominated money market instruments. Money market funds are not designed to offer capital appreciation. Certain money market funds may impose a fee upon the sale of shares or may temporarily suspend the ability of investors to redeem shares if such fund's liquidity falls below required minimums, which may adversely affect the Fund's returns or liquidity.

Other Short-Term Obligations (Fixed Income Funds only). Debt securities initially issued with a remaining maturity of 397 days or less and that have a short-term rating within ratings categories of at least A-1 by S&P or P-1 by Moody's or the equivalent by any other NRSRO.

Privacy and Data Security Laws. U.S. Federal Gramm-Leach-Bliley Act ("GLBA") and other laws limit the disclosure of certain non-public personal information about a consumer to non-affiliated third parties and require financial institutions to disclose certain privacy policies and practices with respect to information sharing with both affiliates and non-affiliated third parties. Many states and a number of foreign jurisdictions have enacted privacy and data security laws requiring safeguards on the privacy and security of consumers' personally identifiable information. Other laws deal with obligations to safeguard and dispose of private information in a manner designed to avoid its dissemination.

Privacy rules adopted by the U.S. Federal Trade Commission implement GLBA and other requirements and govern the disclosure of consumer financial information by certain financial institutions, ranging from banks to private investment funds. U.S. platforms following certain models generally are required to have privacy policies that conform to these GLBA and other requirements. In addition, such platforms typically have policies and procedures intended to maintain personal information of consumers securely and dispose of it properly.

Service providers to the Funds, including the Funds' investment adviser and custodian, and, potentially, a Fund may obtain, hold or process such information in connection with providing services to the Fund. The Funds cannot guarantee the security or confidentiality of that data and cannot guarantee that service providers have been and will continue to comply with GLBA, other data security and privacy laws and any other related regulatory requirements. Violations of GLBA and other laws could subject a Fund to litigation and/or fines, penalties or other regulatory action, which, individually or in the aggregate, could have an adverse effect on the Fund. A Fund may also face regulations related to privacy and data security in the other jurisdictions in which the Fund invests.

Real Estate Investment Trusts ("REITs"). Exposure to the real estate sector may be gained by investing in a variety of ways, including by investing in REIT securities and common, preferred and convertible securities of issuers in real estate-related industries. Each of these types of investments are subject to risks similar to those associated with direct ownership of real estate, including loss to casualty or condemnation, increases in property taxes and operating expenses, zoning law amendments, changes in interest rates, overbuilding and increased competition, variations in market value, and possible environmental liabilities. Real estate-related investments may entail leverage and may be highly volatile. Factors affecting real estate values include the supply of real property in certain markets, changes in zoning laws, delays in completion of construction, changes in real estate values, changes in property taxes, levels of occupancy, adequacy of rent to cover operating expenses, and local, regional and global market conditions. The value of real estate-related investments also may be affected by changes in interest rates, macroeconomic developments, and social and economic trends.

REITs are pooled investment vehicles that own, and typically operate, income-producing real estate or that hold interests in real estate, such as mortgages. If a REIT meets certain requirements, including distributing to shareholders substantially all of its taxable income (other than net capital gains), then it is not taxed on the income distributed to shareholders. REITs are subject to management fees and other expenses, and so the Fund will bear its proportionate share of the costs of the REITs' operations. There are three general categories of REITs: Equity REITs, Mortgage REITs and Hybrid REITs. Equity REITs, which invest primarily in direct fee ownership or leasehold ownership of real property and derive most of their income from rents, are generally affected by changes in the values of and incomes from the properties they own. Mortgage REITs invest mostly in

mortgages on real estate, which may secure, for example, construction, development or long-term loans, and the main source of their income is mortgage interest payments. Mortgage REITs may be affected by the credit quality of the mortgage loans they hold. A hybrid REIT combines the characteristics of equity REITs and mortgage REITs, generally by holding both ownership interests and mortgage interests in real estate, and thus may be subject to risks associated with both real estate ownership and investments in mortgage-related securities. Along with the risks common to different types of real estate-related investments, U.S. REITs, no matter the type, involve additional risk factors, including poor performance by the REIT's manager, adverse changes to the tax laws, and the possible failure by the REIT to qualify for the favorable tax treatment applicable to REITs under the Code or an exemption under the 1940 Act. REITs are not diversified and are heavily dependent on cash flow earned on the property interests they hold.

Mortgage REITs are exposed to the risks specific to the real estate market as well as the risks that relate specifically to the way in which mortgage REITs are organized and operated. Mortgage REITs receive principal and interest payments from the owners of the mortgaged properties. Accordingly, mortgage REITs are subject to the credit risk of the borrowers to whom they extend credit, and are subject to the risks described below under "mortgage-backed securities risk" and "prepayment risk". Mortgage REITs are also subject to significant interest rate risk. Mortgage REITs typically use leverage and many are highly leveraged, which exposes them to the risks of leverage. Leverage risk refers to the risk that leverage created from borrowing may impair a mortgage REIT's liquidity, cause it to liquidate positions at an unfavorable time and increase the volatility of the values of securities issued by the mortgage REIT. The use of leverage may not be advantageous to a mortgage REIT. To the extent that a mortgage REIT incurs significant leverage, it may incur substantial losses if its borrowing costs increase or if the assets it purchases with leverage decrease in value.

A Fund's investment in a REIT may result in the Fund making distributions that constitute a return of capital to Fund shareholders for federal income tax purposes. In addition, distributions attributable to REITs made by a Fund to Fund shareholders will not qualify for the corporate dividends received deduction, or, generally, for treatment as qualified dividend income.

Repurchase Agreements. Each Fund may invest in repurchase agreements. Repurchase agreements, which may be viewed as a type of secured lending by a Fund, typically involve the acquisition by a Fund of debt securities from a selling financial institution such as a bank, savings and loan association or broker-dealer. The repurchase agreements will provide that the Fund will sell back to the institution, and that the institution will repurchase, the underlying security ("collateral") at a specified price and at a fixed time in the future, usually not more than seven days from the date of purchase. The collateral will be maintained in a segregated account and, with respect to United States repurchase agreements, will be marked to market daily to ensure that the full value of the collateral, as specified in the repurchase agreement, does not decrease below the repurchase price plus accrued interest. If such a decrease occurs, additional collateral will be requested and, when received, added to the account to maintain full collateralization. A Fund will accrue interest from the institution until the date the repurchase occurs. Although this date is deemed by each Fund to be the maturity date of a repurchase agreement, the maturities of the collateral securities are not subject to any limits and may exceed one year. Repurchase agreements that have more than seven days remaining to maturity will be considered illiquid for purposes of the restriction on each Fund's investment in illiquid and restricted securities.

Securities Loans. Each Fund may make secured loans of its portfolio securities, on either a short-term or long-term basis, amounting to not more than 33 1/3% of its total assets, thereby potentially realizing additional income. The risks in lending portfolio securities, as with other extensions of credit, consist of possible delay in recovery of the securities or possible loss of rights in the collateral should the borrower fail financially. If a borrower defaults, the value of the collateral may decline before a Fund can dispose of it. As a matter of policy, securities loans are made to broker-dealers pursuant to agreements requiring that the loans be continuously secured by collateral consisting of cash or short-term debt obligations at least equal at all times to the value of the securities on loan, marked-to-market daily. The borrower pays to a Fund an amount equal to any dividends or interest received on securities lent. A Fund may invest the cash collateral received (generally in money market

investments or money market funds) or receive a fee from the borrower. In the case of cash collateral, a Fund typically pays a rebate to the borrower. A Fund retains all or a portion of the interest received on investment of the cash collateral or receives a fee from the borrower. A Fund bears the risk of any loss on the investment of the collateral; any such loss may exceed, potentially by a substantial amount, any profit to the Fund from its securities lending activities. Although voting rights, or rights to consent, with respect to the loaned securities may pass to the borrower, a Fund retains the right to call the loans at any time on reasonable notice, and it will do so to enable a Fund to exercise voting rights on any matters materially affecting the investment. Each Fund may also call such loans in order to sell the securities. A Fund may pay fees in connection with arranging loans of its portfolio securities.

Although control over, and voting rights or rights to consent with respect to, the loaned securities pass to the borrower, a Fund, as the lender, retains the right to call the loans and obtain the return of the securities loaned at any time on reasonable notice. A Fund may call such loans in order to sell the securities involved or, if the holders of the securities are asked to vote upon or consent to matters which the Adviser believes materially affect the investment, in order to vote the securities. If the borrower defaults on its obligation to return the securities loaned because of insolvency or other reasons, a Fund could experience delays and costs in recovering the securities loaned or in gaining access to the collateral. These delays and costs could be greater for foreign securities. When engaged in securities lending, a Fund's performance will continue to reflect changes in the value of the securities loaned and will also reflect the receipt of either interest, through investment of cash collateral by a Fund in permissible investments, or a fee, if the collateral is U.S. government securities. It is possible that a Fund will realize losses on the investment of any cash collateralizing a securities loan; any such losses would be for the account of a Fund, not the borrower.

Short-Term Investments. Short-term, high quality investments, including, for example, commercial paper, bankers' acceptances, certificates of deposit, bank time deposits, repurchase agreements, and investments in money market mutual funds or similar pooled investments.

Strategies and Investments of the Fixed Income Funds only

Bank Capital Securities. A Fixed Income Fund may invest in bank capital securities of both non-U.S. (foreign) and U.S. issuers. Bank capital securities may be issued by banks to help fulfill their regulatory capital requirements. Bank capital securities may be of any credit quality. Bank capital securities may include, among other investments, fixed-maturity dated subordinated notes; hybrid securities with characteristics of both debt obligations and preferred stocks; perpetual callable securities with no maturity date and a cumulative interest deferral feature, which permits the issuer bank to withhold payment of interest until a later undetermined date; and convertible debt securities that can be converted at the issuer's option to equity securities. Investments in bank capital securities are subject to the risks of other debt investments, such as default and non-payment, as well as certain other risks, such as the risk that bank regulators may force the bank to dissolve, merge, restructure its capitalization or take other actions intended to prevent its failure or ensure its orderly resolution. Bank regulators in certain jurisdictions have broad authorities they may use to prevent the failure of banking institutions or to stabilize the banking industry, all of which may adversely affect the values of investments in bank capital securities and other bank obligations, including those of other banks.

A Fixed Income Fund may invest in contingent securities structured as contingent convertible securities also known as "CoCos." Contingent convertible securities are typically issued by non-U.S. banks and are designed to behave like bonds in times of economic health yet absorb losses when a pre-determined trigger event occurs. A contingent convertible security is a hybrid debt security either convertible into equity at a predetermined share price or written down in value based on the specific terms of the individual security if a pre-specified trigger event occurs (the "**Trigger Event**"). Unlike traditional convertible securities, the conversion of a contingent convertible security from debt to equity is "contingent" and will occur only in the case of a Trigger Event. Trigger Events vary by instrument and are defined by the documents governing the contingent convertible security. Such Trigger Events may include a decline in the issuer's capital below a specified threshold level, increase in the issuer's risk weighted assets, the share price of the issuer falling to a particular level for a certain

period of time and certain regulatory events. Contingent convertible securities are subject to the credit, interest rate, high yield security, foreign security and market risks associated with bonds and equities, and to the risks specific to convertible securities in general. Contingent convertible securities are also subject to additional risks specific to their structure including conversion risk. Because Trigger Events are not consistently defined among contingent convertible securities, this risk is greater for contingent convertible securities that are issued by banks with capital ratios close to the level specified in the Trigger Event. In addition, coupon payments on contingent convertible securities are discretionary and may be cancelled by the issuer at any point, for any reason, and for any length of time. The discretionary cancellation of payments is not an event of default and there are no remedies to require re-instatement of coupon payments or payment of any past missed payments. Coupon payments may also be subject to approval by the issuer's regulator and may be suspended in the event there are insufficient distributable reserves. Due to uncertainty surrounding coupon payments, contingent convertible securities may be volatile and their price may decline rapidly in the event that coupon payments are suspended. Contingent convertible securities typically are structurally subordinated to traditional convertible bonds in the issuer's capital structure. In certain scenarios, investors in contingent convertible securities may suffer a loss of capital ahead of equity holders or when equity holders do not.

Bank Obligations. A Fixed Income Fund may invest in bank obligations including, without limitation certificates of deposit, bankers' acceptance and fixed time deposits. Certificates of deposit are negotiable certificates that are issued against funds deposited in a commercial bank for a definite period of time and that earn a specified return. Bankers' acceptances are negotiable drafts or bills of exchange, normally drawn by an importer or exporter to pay for specific merchandise, which are "accepted" by a bank, meaning, in effect, that the bank unconditionally agrees to pay the face value of the instrument on maturity. Fixed time deposits are bank obligations payable at a stated maturity date and bearing interest at a fixed rate. Fixed time deposits may be withdrawn on demand by the investor, but may be subject to early withdrawal penalties which vary depending upon market conditions and the remaining maturity of the obligations. There are generally no contractual restrictions on the right to transfer a beneficial interest in a fixed time deposit to a third party, although there is generally no market for such deposits. A Fixed Income Fund may also hold funds on deposit with its custodian bank in an interest-bearing account for temporary purposes.

The activities of U.S. banks and most foreign banks are subject to comprehensive regulations which, in the case of U.S. regulations, have undergone substantial changes in the past decade and are currently subject to legislative and regulatory scrutiny. The enactment of new legislation or regulations, as well as changes in interpretation and enforcement of current laws, may affect the manner of operations and profitability of U.S. and foreign banks. Significant developments in the U.S. banking industry have included increased competition from other types of financial institutions, increased acquisition activity and geographic expansion. Banks may be particularly susceptible to certain economic factors, such as interest rate changes and adverse developments in the market for real estate. Fiscal and monetary policy and general economic cycles can affect the availability and cost of funds, loan demand and asset quality and thereby impact the earnings and financial conditions of banks.

Obligations of foreign banks involve somewhat different investment risks than those affecting obligations of United States banks, including the possibilities that their liquidity could be impaired because of future political and economic developments, that their obligations may be less marketable than comparable obligations of United States banks, that a foreign jurisdiction might impose withholding taxes on interest income payable on those obligations, that foreign deposits may be seized or nationalized, that foreign governmental restrictions such as exchange controls may be adopted which might adversely affect the payment of principal and interest on those obligations and that the selection of those obligations may be more difficult because there may be less publicly available information concerning foreign banks or the accounting, auditing and financial reporting standards, practices and requirements applicable to foreign banks may differ from those applicable to United States banks. Foreign banks are not generally subject to examination by any United States Government agency or instrumentality.

Bankruptcy, Workout and Other Restructurings. The Adviser may pursue rights related to investments made on behalf of a Fixed Income Fund and their other clients in connection with bankruptcies, restructurings, or other workout situations. The Adviser may advise other clients, including clients whose interests may be adverse to those of a Fixed Income Fund, in one or more bankruptcies, restructurings, and other workout situations in which a Fixed Income Fund has an interest. Those clients (or the Adviser acting on behalf of a client) may take actions in such bankruptcies, restructurings, and other workout situations that may adversely affect a Fixed Income Fund. In some cases, this may involve the Adviser representing clients, including the Fixed Income Funds, in creditor committees or other similar groups, including ad hoc groups, and/or the Adviser may designate a third party to represent the Fixed Income Funds' interests in a bankruptcy, restructuring, or other workout situation generally. In a bankruptcy, restructuring, or other workout situation, the Adviser may cause a Fixed Income Fund to make new investments in a company where the Adviser believes it is in the Fixed Income Funds' best interest to do so, including through the acquisition of new or additional debt or equity securities or the acquisition or the making of new or additional loans. A bankruptcy, restructuring, or other workout situation may also result in a Fixed Income Fund providing or supporting new financing or capital to the existing or restructured company, including in the form of debtor-in-possession loans, exit financings, a committed credit facility, rights offerings, and/or back-stop agreements related to new financings or securities issuances. Participation by a Fixed Income Fund in a bankruptcy, restructuring, or other workout situation may involve the Fixed Income Fund bearing fees and expenses, require the Fixed Income Fund to provide indemnities to involved parties, and expose the Fixed Income Fund to potential liabilities under the federal bankruptcy laws or other applicable laws. The risks associated with participation in a bankruptcy, restructuring, or other workout situation, and of investing in distressed issuers, may be more pronounced in foreign jurisdictions in which the laws governing, and the formality of, a bankruptcy, restructuring, or other workout situation, may differ significantly from their equivalent in the United States. If the Adviser's assessment of the eventual recovery value of a security proves incorrect or if the actions taken by the Adviser or its designee prove unsuccessful, a Fixed Income Fund may be required to accept cash or instruments worth less than originally anticipated. In addition, events, including unexpected or unforeseeable events, may occur during a bankruptcy, restructuring, or other workout situation, which may adversely affect the value of a Fixed Income Fund's investment and/or its recovery in the bankruptcy, restructuring, or other workout situation. A Fixed Income Fund could potentially lose more than its original investment if, for example, the Fixed Income Fund makes new or additional investments or indemnifies its agents or other third parties for losses they incur in connection with their participation in a bankruptcy, restructuring, or other workout situation.

B-Notes. A Fixed Income Fund may originate or invest in B-Notes. A B-Note is a mortgage loan typically (i) secured by a first mortgage on a single large commercial property or group of related properties and (ii) subordinated to an A-Note secured by the same first mortgage on the same collateral. As a result, if a borrower defaults, there may not be sufficient funds remaining for B-Note holders after payment to the A-Note holders. Since each transaction is privately negotiated, B-Notes can vary in their structural characteristics and risks. For example, the rights of holders of B-Notes to control the process following a borrower default may be limited in certain investments. B-Notes typically are secured by a single property, and so reflect the increased risks associated with a single property compared to a pool of properties.

Collateralized Debt Obligations. Collateralized debt obligations ("CDOs") are a type of asset-backed security and include, among other things, collateralized bond obligations ("CBOs"), collateralized loan obligations ("CLOs") and other similarly structured securities. A CBO is a trust which may be backed by a diversified pool of high risk, below investment grade fixed income securities. A CLO is a trust typically collateralized by a pool of loans, which may include, among others, domestic and foreign senior secured loans, senior unsecured loans, second lien loans or other types of subordinate loans, and mezzanine loans, including loans that may be rated below investment grade or equivalent unrated loans and including loans that may be covenant-lite. The cash flows from the CDO trust are generally split into two or more portions, called tranches, varying in risk and yield. Senior tranches are paid from the cash flows from the underlying assets before the junior tranches and equity or "first loss" tranches. Losses are first borne by the equity tranches, next by the junior tranches, and finally by the senior tranches. Senior tranches pay the lowest interest rates but are generally safer investments than more junior

tranches because, should there be any default, senior tranches are typically paid first. The most junior tranches, such as equity tranches, would attract the highest interest rates but suffer the highest risk of loss should the holder of an underlying loan default. If some loans default and the cash collected by the CDO is insufficient to pay all of its investors, those in the lowest, most junior tranches suffer losses first. Since it is partially protected from defaults, a senior tranche from a CDO trust typically has higher ratings and lower yields than the underlying securities, and can be rated investment grade. Despite the protection from the equity tranche, more senior CDO tranches can experience substantial losses due to actual defaults, increased sensitivity to defaults due to collateral default and disappearance of protecting tranches, market anticipation of defaults and aversion to CDO securities as a class.

The risks of an investment in a CDO depend largely on the quality and type of the collateral and the tranche of the CDO in which a Fixed Income Fund invests. Normally, CBOs, CLOs and other CDOs are privately offered and sold, and thus are not registered under the securities laws. As a result, there may be a limited secondary market for investments in CDOs and such investments may be illiquid. In addition to the risks associated with debt instruments (e.g., interest rate risk and credit risk), CDOs carry additional risks including, but not limited to: (i) the possibility that distributions from collateral securities will not be adequate to make interest or other payments; (ii) the quality of the collateral may decline in value or default; (iii) the possibility that a Fixed Income Fund may invest in CDOs that are subordinate to other classes of the issuer's securities; and (iv) the complex structure of the security may not be fully understood at the time of investment and may produce disputes with the issuer or unexpected investment results.

A Fixed Income Fund may invest in CDOs (including CLOs and CBOs) and other structured products (see "Structured Products and Structured Notes Risk") sponsored or managed by, or otherwise affiliated with, the Adviser or related parties of the Adviser. Such investments may include investments in debt or equity interests issued of the CDO or structured product as well as investments purchased on the secondary market, and a Fixed Income Fund may invest in any tranche of the CDO or structured product, including an equity tranche.

Collateralized Mortgage Obligations and Multiclass Pass-Through Securities. CMOs are debt obligations collateralized by mortgage loans or mortgage pass-through securities. CMOs may be collateralized by Government National Mortgage Association ("Ginnie Mae"), Federal National Mortgage Association ("Fannie Mae"), or Federal Home Loan Mortgage Corporation ("Freddie Mac") certificates, but also may be collateralized by whole loans or private mortgage pass-through securities (such collateral is collectively hereinafter referred to as "**Mortgage Assets**"). Mortgage Assets may be collateralized by commercial or residential uses. Multiclass pass-through securities are equity interests in a trust composed of Mortgage Assets. Payments of principal of and interest on the Mortgage Assets, and any reinvestment income thereon, may require the Fixed Income Funds to pay debt service on the CMOs or make scheduled distributions on the multiclass pass-through securities. CMOs may be issued by an agency, instrumentality or sponsored corporation of the U.S. government ("**Federal Agency**"), or by private originators of, or investors in, mortgage loans, including savings and loan associations, mortgage banks, commercial banks, investment banks and special purpose subsidiaries of the foregoing. The issuer of a series of mortgage pass-through securities may elect to be treated as a REMIC. REMICs include governmental and/or private entities that issue a fixed pool of mortgages secured by an interest in real property. REMICs are similar to CMOs in that they issue multiple classes of securities, but unlike CMOs, which are required to be structured as debt securities, REMICs may be structured as indirect ownership interests in the underlying assets of the REMICs themselves. Although CMOs and REMICs differ in certain respects, characteristics of CMOs described below apply in most cases to REMICs, as well.

In a CMO, a series of bonds or certificates is issued in multiple classes. Each class of CMOs, often referred to as a tranche, is issued at a specific fixed or floating coupon rate and has a stated maturity or final distribution date. Principal prepayments on the Mortgage Assets may cause the CMOs to be retired substantially earlier than their stated maturities or final distribution dates. Interest is paid or accrues on all classes of the CMOs on a monthly, quarterly or semiannual basis. Certain CMOs may have variable or floating interest rates and others may be stripped mortgage securities. For more information on stripped mortgage securities, see "Stripped Mortgage

Securities” below. A Fixed Income Fund’s investment in CMOs may include investment in Z Bonds. Interest on a Z Bond is accrued and added to principal and a like amount is paid as principal on the other tranches of the CMO currently being paid off. When the other tranches of the CMO are paid in full, interest and principal on the Z Bond begin to be paid currently; as a result, Z Bonds typically have a longer average life relative to other tranches of the CMO.

The principal of and interest on the Mortgage Assets may be allocated among the several classes of a CMO series in a number of different ways. Generally, the purpose of the allocation of the cash flow of a CMO to the various classes is to obtain a more predictable cash flow to certain of the individual tranches than exists with the underlying collateral of the CMO. As a general rule, the more predictable the cash flow is on a CMO tranche, the lower the anticipated yield will be on that tranche at the time of issuance relative to prevailing market yields on other mortgage-backed securities. As part of the process of creating more predictable cash flows on most of the tranches in a series of CMOs, one or more tranches generally must be created that absorb most of the volatility in the cash flows on the underlying mortgage loans. The yields on these tranches are generally higher than prevailing market yields on mortgage-backed securities with similar maturities. As a result of the uncertainty of the cash flows of these tranches, the market prices of and yield on these tranches generally are more volatile. See “—Collateralized Debt Obligations” above for a discussion on investments in structured products with multiple tranches.

Commercial and Residential Real Estate Loans. A Fixed Income Fund may acquire performing commercial whole mortgage loans secured by a first mortgage lien on commercial property, which may be structured to either permit the Fixed Income Fund to retain the entire loan, or sell the lower yielding senior portions of the loans and retain the higher yielding subordinate investment. Typically, borrowers of these loans are institutions and real estate operating companies and investors. These loans are generally secured by commercial real estate assets in a variety of industries with a variety of characteristics. A Fixed Income Fund may originate and own entire whole loans or in some cases may choose to originate and syndicate a portion of the risk or participate in syndications led by other institutions. In some cases, a Fixed Income Fund may originate and fund a first mortgage loan with the intention of selling the senior tranche, or an A-Note, and retaining the subordinated tranche, or a B-Note, or mezzanine loan tranche. A Fixed Income Fund may seek, in the future, to enhance the returns of all or a senior portion of its commercial mortgage loans through securitizations, should the market to securitize commercial mortgage loans recover. In addition to interest, a Fixed Income Fund may receive origination fees, extension fees, modification or similar fees in connection with our whole mortgage loans.

A Fixed Income Fund may also acquire performing residential mortgage loans secured by a first mortgage lien on residential property. Typically, borrowers of these loans are individuals rather than institutions, and the quality of residential real estate loans can depend largely on the credit characteristics of the underlying borrowers. In the last decade, the residential mortgage market in the United States experienced difficulties that resulted in losses on residential mortgage loans (especially subprime and second-lien mortgage loans). There can be no assurance that such difficulties would not be experienced again, which could result in losses as a result of investments in residential real estate loans. For more information regarding these and other risks, see “—Mortgage Backed Securities Risks.”

CMO Residuals. CMO residuals are mortgage securities issued by agencies or instrumentalities of the U.S. government or by private originators of, or investors in, mortgage loans, including savings and loan associations, homebuilders, mortgage banks, commercial banks, investment banks and special purpose entities of the foregoing. The cash flow generated by the mortgage assets underlying a series of a CMO is applied first to make required payments of principal and interest on the securities or certificates issued by the CMO and second to pay the related administrative expenses and any management fee of the issuer. The residual in a CMO structure generally represents the interest in any excess cash flow remaining after making the foregoing payments. Each payment of such excess cash flow to a holder of the related CMO residual represents income and/or a return of capital. The amount of residual cash flow resulting from a CMO will depend on, among other things, the characteristics of the mortgage assets, the coupon rate of each class of CMO, prevailing interest rates, the amount

of administrative expenses and the pre-payment experience on the mortgage assets. In particular, the yield to maturity on CMO residuals is extremely sensitive to pre-payments on the related underlying mortgage assets. In addition, if a series of a CMO includes a class that bears interest at an adjustable rate, the yield to maturity on the related CMO residual will also be extremely sensitive to changes in the level of the index upon which interest rate adjustments are based. As described below with respect to stripped mortgage-backed securities, in certain circumstances a Fixed Income Fund may fail to recoup fully its initial investment in a CMO residual. CMO residuals are generally purchased and sold by institutional investors through several investment banking firms acting as brokers or dealers. In addition, CMO residuals may, or pursuant to an exemption therefrom, may not have been registered under the Securities Act. CMO residuals, whether or not registered under the Securities Act, may be subject to certain restrictions on transferability, and may be deemed “illiquid.”

Contingent Value Rights. A Fixed Income Fund may invest in contingent value rights (“CVRs”). A CVR gives its holder the right to receive an amount, which may be fixed or determined by a formula, in the event that a specified corporate action or other business event or trigger occurs (or fails to occur) during the term of the CVR. CVRs are often awarded to shareholders as a result of a corporate acquisition or restructuring. For example, shareholders of an acquired company may receive CVRs that enable them to receive additional shares of the acquiring company upon certain trigger events such as a specified drop in the acquiring company’s share price. Risks associated with investments in CVRs are generally similar to risks associated with the use of options, such as the risk that the trigger event does not occur prior to the CVR’s expiration, causing it to expire with no value. CVRs also may be subject to risks associated with unregistered securities as well as illiquidity risk, counterparty risk, and credit risk. In addition, CVRs may be subject to valuation risk because they may be valued based on the likelihood of the occurrence of a trigger event, which may require subjective modeling and judgment.

Credit-Linked Notes. A Fixed Income Fund may invest in credit-linked notes, which are a type of structured note (see “—Structured Products and Structured Notes Risk”) that are typically set-up as a pass-through note structure created by a broker or bank as an alternative investment for funds or other purchasers to directly invest in a basket of derivative instruments, such as credit default swaps, total return swaps, interest rate swaps and/or other securities, in order to provide exposure to the high yield or another debt securities market. Credit-linked notes are privately negotiated transactions whose returns are linked to the returns of one or more designated securities or other instruments that are referred to as “reference securities,” such as an infrastructure-related bond. Through the purchase of a credit-linked note, a Fixed Income Fund assume the risk of the default or, in some cases, other declines in credit quality of the reference securities. A Fixed Income Fund also is exposed to the credit risk of the issuer of the credit-linked note in the full amount of the purchase price of the note, and the notes are often not secured by the reference securities or other collateral. A Fixed Income Fund has the right to receive periodic interest payments from the issuer of the credit-linked note at an agreed-upon interest rate, and, if there has been no default or, if applicable, other declines in credit quality, a return of principal at the maturity date.

Credit-linked notes are also subject to the risks of the reference securities, among others, credit risk, default or similar event risk, counterparty risk, interest rate risk, valuation risk, leverage risk and management risk, underlying the credit-linked notes. If one of the underlying reference securities defaults, or suffers certain other declines in credit quality, a Fixed Income Fund may, instead of receiving repayment of principal in whole or in part, receive the security that has defaulted.

It is expected that the trusts that issue credit-linked trust certificates will constitute “private” investment companies, exempt from registration under the 1940 Act. Although the trusts are typically private investment companies, they generally are not actively managed such as a “hedge fund” might be. It also is expected that the certificates will be exempt from registration under the Securities Act. Accordingly, there may be no established trading market for the certificates and they may constitute illiquid investments. If market quotations are not readily available for the certificates, they will be valued at fair value by the Adviser, in its capacity as the Board’s valuation designee pursuant to Rule 2a-5 under the 1940 Act, through its Valuation Sub-Committee.

The market for credit-linked notes may suddenly become illiquid. The other parties to the transaction may be the only investors with sufficient understanding of the derivative to be interested in bidding for it. Changes in

liquidity may result in significant, rapid and unpredictable changes in the prices for credit linked notes. In certain cases, a market price for a credit-linked note may not be available or the market may not be active.

Credit Risk Transfer Securities Risk. Credit risk transfer securities are fixed- or floating-rate unsecured general obligations issued from time to time by Freddie Mac, Fannie Mae or other government sponsored entities (“GSEs”). Typically, such securities are issued at par and have stated final maturities. The securities are structured so that: (i) interest is paid directly by the issuing GSE, and (ii) principal is paid by the issuing GSE in accordance with the principal payments and default performance of a certain pool of residential mortgage loans acquired by the GSE (“**reference obligations**”). The performance of the securities will be directly affected by the selection of the reference obligations by the GSE. Such securities are issued in tranches to which are allocated certain principal repayments and credit losses corresponding to the seniority of the particular tranche. Each tranche of securities will have credit exposure to the reference obligations and the yield to maturity will be directly related to, among other things, the amount and timing of certain defined credit events on the reference obligations, any prepayments by borrowers and any removals of a reference obligation from the pool.

Credit risk transfer securities are unguaranteed and unsecured debt securities issued by the GSE and therefore are not directly linked to or backed by the underlying mortgage loans. As a result, in the event that a GSE fails to pay principal or interest on its credit risk transfer securities or goes through a bankruptcy, insolvency or similar proceeding, holders of such credit risk transfer securities have no direct recourse to the underlying mortgage loans and will generally receive recovery on par with other unsecured creditors in such a scenario. A Fixed Income Fund may also invest in credit risk transfer securities that are issued by private entities, such as banks or other financial institutions. Such securities are subject to risks similar to those associated with credit risk transfer securities issued by GSEs, though they may be less credit worthy than a GSE.

The risks associated with an investment in credit risk transfer securities are different than the risks associated with an investment in mortgage-backed securities subject to a guarantee or the credit support of Fannie Mae, Freddie Mac, or other GSEs because some or all of the mortgage default or credit risk associated with the underlying mortgage loans is transferred to investors in credit risk transfer securities. As a result, the risk of loss is substantially greater with credit risk transfer securities.

Delayed Funding Loans and Revolving Credit Facilities. Delayed funding loans and revolving credit facilities are borrowing arrangements in which the lender agrees to make loans up to a maximum amount upon demand by the borrower during a specified term. A revolving credit facility differs from a delayed funding loan in that as the borrower repays the loan, an amount equal to the repayment may be borrowed again during the term of the revolving credit facility. Delayed funding loans and revolving credit facilities usually provide for floating or variable rates of interest. These commitments may have the effect of requiring a Fixed Income Fund to increase its exposure to a company at a time when it might not otherwise be desirable to do so (including a time when the company’s financial condition makes it unlikely that such amounts will be repaid or which the Fixed Income Fund needs to sell other assets to raise cash to satisfy its obligor).

Equipment Trust Certificates (ETCs) and Enhanced Equipment Trust Certificates (EETCs). ETCs and EETCs are types of asset-backed securities that generally represent undivided fractional interests in a trust whose assets consist of a pool of equipment retail installment contracts or leased equipment. EETCs are similar to ETCs, except that the securities have been divided into two or more classes, each with different payment priorities and asset claims (see “—Collateralized Debt Obligations Risk” below for information regarding how different classes or tranches of interests issued by an issuer can affect the risks of an investment in EETCs). ETCs and EETCs are typically issued by specially-created trusts established by airlines, railroads, or other transportation firms. The assets of ETCs and EETCs are used to purchase equipment, such as airplanes, railroad cars, or other equipment, which may in turn serve as collateral for the related issue of the ETCs or EETCs, and the title to such equipment is held in trust for the holders of the issue. The equipment generally is leased from the specially-created trust by the airline, railroad or other firm, which makes rental or lease payments to the specially-created trust to provide cash flow for payments to ETC and EETC holders. Holders of ETCs and EETCs must look to the collateral

securing the certificates, typically together with a guarantee provided by the lessee firm or its parent company for the payment of lease obligations, in the case of default in the payment of principal and interest on the ETCs or EETCs.

ETCs and EETCs are subject to the risk that the lessee or payee defaults on its payments, and risks related to potential declines in the value of the equipment that serves as collateral for the issue. ETCs and EETCs are generally regarded as obligations of the company that is leasing the equipment and may be shown as liabilities in its balance sheet as a capitalized lease in accordance with generally accepted accounting principles. The lessee company, however, does not own the equipment until all the certificates are redeemed and paid. In the event the company defaults under its lease, the trustee may terminate the lease. If another lessee is not available, then payments on the certificates would cease until another lessee is available.

Event-Linked Bonds. Event-linked exposure may be gained by investing in “event-linked bonds” or “event-linked swaps,” or implement “event-linked strategies.” Event-linked exposure results in gains that typically are contingent on the non-occurrence of a specific “trigger” event, such as a hurricane, earthquake, or other physical or weather-related phenomena. Some event-linked bonds are commonly referred to as “catastrophe bonds.” They may be issued by government agencies, insurance companies, reinsurers, special purpose corporations or other on-shore or off-shore entities (such special purpose entities are created to accomplish a narrow and well-defined objective, such as the issuance of a note in connection with a reinsurance transaction). If a trigger event causes losses exceeding a specific amount in the geographic region and time period specified in a bond, the principal amount of the bond is reduced (potentially to zero), and a Fixed Income Fund may lose a portion or all of its principal invested in the bond. If no trigger event occurs, a Fixed Income Fund will recover its principal plus interest. For some event-linked bonds, the trigger event or losses may be based on company-wide losses, index-portfolio losses, industry indices, or readings of scientific instruments rather than specified actual losses. Often the event-linked bonds provide for extensions of maturity that are mandatory, or optional at the discretion of the issuer, in order to process and audit loss claims in those cases where a trigger event has, or possibly has, occurred. An extension of maturity may increase volatility. In addition to the specified trigger events, event-linked bonds also may expose an investor to certain unanticipated risks including but not limited to issuer risk, credit risk, counterparty risk, adverse regulatory or jurisdictional interpretations, and adverse tax consequences.

Event-linked bonds are a relatively new type of financial instrument. As such, there is no significant trading history of these securities, and there can be no assurance that a liquid market in these instruments will develop. Lack of a liquid market may impose the risk of higher transaction costs and the possibility that a Fixed Income Fund may be forced to liquidate positions when it would not be advantageous to do so.

Floating Rate and Variable Rate Demand Notes. A Fixed Income Fund may purchase taxable or tax-exempt floating rate and variable rate demand notes for short-term cash management or other investment purposes. Floating rate and variable rate demand notes and bonds may have a stated maturity in excess of one year but may have features that permit a holder to demand payment of principal plus accrued interest upon a specified number of days’ notice. Frequently, such obligations are secured by letters of credit or other credit support arrangements provided by banks. The issuer has a corresponding right, after a given period, to prepay in its discretion the outstanding principal of the obligation plus accrued interest upon a specific number of days’ notice to the holders. The interest rate of a floating rate instrument may be based on a known lending rate, such as a bank’s prime rate, and is reset whenever such rate is adjusted. The interest rate on a variable rate demand note is reset at specified intervals at a market rate.

Forward Commitments and Dollar Rolls. A Fixed Income Fund may enter into contracts to purchase securities for a fixed price at a future date beyond customary settlement time (“**forward commitments**”). In the case of to-be-announced (“**TBA**”) purchase commitments, the unit price and the estimated principal amount are established when the Fixed Income Fund enters into a contract, with the actual principal amount being within a specified range of the estimate.

Forward commitments may be considered securities in themselves, and involve a risk of loss if the value of the security to be purchased declines prior to the settlement date, which risk is in addition to the risk of decline in the value of a Fixed Income Fund's other assets. Where such purchases are made through dealers, a Fixed Income Fund relies on the dealer to consummate the sale. The dealer's failure to do so may result in the loss to the Fixed Income Fund of an advantageous yield or price. Although a Fixed Income Fund will generally enter into forward commitments with the intention of acquiring securities for its portfolio or for delivery pursuant to options contracts it has entered into, a Fixed Income Fund may dispose of a commitment prior to settlement if the Adviser deems it appropriate to do so. A Fixed Income Fund may realize short-term profits or losses upon the sale of forward commitments.

A Fixed Income Fund may enter into TBA sale commitments to hedge its portfolio positions or to sell securities it owns under delayed delivery arrangements. Proceeds of TBA sale commitments are not received until the contractual settlement date. Unsettled TBA sale commitments are valued at current market value of the underlying securities. If the TBA sale commitment is closed through the acquisition of an offsetting purchase commitment, a Fixed Income Fund realizes a gain or loss on the commitment without regard to any unrealized gain or loss on the underlying security. If a Fixed Income Fund delivers securities under the commitment, the Fixed Income Fund realizes a gain or loss from the sale of the securities based upon the unit price established at the date the commitment was entered into.

A Fixed Income Fund may enter into dollar roll transactions (generally using TBAs) in which it sells a fixed income security for delivery in the current month and simultaneously contracts to purchase similar securities (for example, same type, coupon and maturity) at an agreed upon future time. By engaging in a dollar roll transaction, a Fixed Income Fund foregoes principal and interest paid on the security that is sold, but receives the difference between the current sales price and the forward price for the future purchase. A Fixed Income Fund would also be able to earn interest on the proceeds of the sale before they are reinvested. A Fixed Income Fund accounts for dollar rolls as purchases and sales. Dollar rolls may be used to create investment leverage and may increase a Fixed Income Fund's risk and volatility.

The obligation to purchase securities on a specified future date involves the risk that the market value of the securities that a Fixed Income Fund is obligated to purchase may decline below the purchase price. In addition, in the event the other party to the transaction files for bankruptcy, becomes insolvent or defaults on its obligation, a Fixed Income Fund may be adversely affected.

Proposed amendments to FINRA rules include mandatory margin requirements for the TBA market that would require a Fixed Income Fund to post collateral in connection with certain of its TBA transactions. There is no similar requirement applicable to the Funds' TBA counterparties. If those rules are implemented, the required collateralization of TBA trades could increase the cost of TBA transactions to the Fixed Income Fund and impose added operational complexity.

Government Mortgage Pass-Through Securities. A Fixed Income Fund may invest in mortgage pass-through securities representing participation interests in pools of residential mortgage loans purchased from individual lenders by a Federal Agency or originated by private lenders and guaranteed, to the extent provided in such securities, by an applicable Federal Agency. Such securities, which are ownership interests in the underlying mortgage loans, differ from conventional debt securities, which provide for periodic payment of interest in fixed amounts (usually semiannually) and principal payments at payments (not necessarily in fixed amounts) that are a pass-through of the monthly interest and principal payments (including any prepayments) made by the individual borrowers on the pooled mortgage loans, net of any fees paid to the guarantor of such securities and the servicer of the underlying mortgage loans.

The government mortgage pass-through securities in which a Fixed Income Fund may invest include those issued or guaranteed by Ginnie Mae, Fannie Mae and Freddie Mac. Ginnie Mae certificates are direct obligations of the U.S. government and, as such, are backed by the full faith and credit of the United States. Fannie Mae is a

federally chartered, privately owned corporation and Freddie Mac is a corporate instrumentality of the United States. Fannie Mae and Freddie Mac certificates are not backed by the full faith and credit of the United States, but the issuing agency or instrumentality has the right to borrow, to meet its obligations, from an existing line of credit with the U.S. Treasury. The U.S. Treasury has no legal obligation to provide such line of credit and may choose not to do so.

Certificates for these types of mortgage-backed securities evidence an interest in a specific pool of mortgages. These certificates are, in most cases, modified pass-through instruments, wherein the issuing agency guarantees the payment of principal and interest on mortgages underlying the certificates, whether or not such amounts are collected by the issuer on the underlying mortgages.

The Housing and Economic Recovery Act of 2008 (“**HERA**”) authorized the Secretary of the Treasury to support Fannie Mae, Freddie Mac, and the Federal Home Loan Banks (“**FHLBs**”) (collectively, the “**GSEs**”) by purchasing obligations and other securities from those government-sponsored enterprises. HERA gave the Secretary of the Treasury broad authority to determine the conditions and amounts of such purchases.

On September 6, 2008, the Federal Housing Finance Agency (“**FHFA**”) placed Fannie Mae and Freddie Mac into conservatorship. As the conservator, FHFA succeeded to all rights, titles, powers and privileges of Fannie Mae and Freddie Mac and of any stockholder, officer or director of Fannie Mae and Freddie Mac with respect to Fannie Mae and Freddie Mac and the assets of Fannie Mae and Freddie Mac. FHFA selected a new chief executive officer and chairman of the board of directors for Fannie Mae and Freddie Mac.

In connection with the conservatorship, the U.S. Treasury, exercising powers granted to it under HERA, entered into a Senior Preferred Stock Purchase Agreement (“**SPA**”) with each of Fannie Mae and Freddie Mac pursuant to which the U.S. Treasury will purchase up to an aggregate of \$100 billion of each of Fannie Mae and Freddie Mac to maintain a positive net worth in each enterprise. This agreement contains various covenants that severely limit each enterprise’s operations. In exchange for entering into these agreements, the U.S. Treasury received \$1 billion of each enterprise’s senior preferred stock and warrants to purchase 79.9% of each enterprise’s common stock. On February 18, 2009, the U.S. Treasury announced that it was doubling the size of its commitment to each enterprise under the Senior Preferred Stock Program to \$200 billion. The U.S. Treasury’s obligations under the Senior Preferred Stock Program are for an indefinite period of time for a maximum amount of \$200 billion per enterprise. On December 24, 2009, the U.S. Treasury announced further amendments to the SPAs which included additional financial support for each GSE through the end of 2012 and changes to the limits on their retained mortgage portfolios. Although legislation has been enacted to support certain GSEs, including the FHLBs, Freddie Mac and Fannie Mae, there is no assurance that GSE obligations will be satisfied in full, or that such obligations will not decrease in value or default. It is difficult, if not impossible, to predict the future political, regulatory or economic changes that could impact the GSEs and the values of their related securities or obligations.

Fannie Mae and Freddie Mac are continuing to operate as going concerns while in conservatorship and each remains liable for all of its obligations, including its guaranty obligations, associated with its mortgage-backed securities. The SPA is intended to enhance each of Fannie Mae’s and Freddie Mac’s ability to meet its obligations. The FHFA has indicated that the conservatorship of each enterprise will end when the director of FHFA determines that FHFA’s plan to restore the enterprise to a safe and solvent condition has been completed.

Fannie Mae and Freddie Mac may be dependent upon the continued support of the U.S. Treasury and the FHFA in order to continue operating their businesses. Fannie Mae and Freddie Mac also receive substantial support from the Federal Reserve, which may cease at any time. The conservatorship has no specified termination date. There can be no assurance as to when or how the conservatorship will be terminated or whether Fannie Mae or Freddie Mac will continue to exist following the conservatorship or what their respective businesses structures will be during or following the conservatorship.

Under the Federal Housing Finance Regulatory Reform Act of 2008 (the “**Reform Act**”), which was included as part of Housing and Economic Recovery Act of 2008, FHFA, as conservator or receiver, has the power to repudiate any contract entered into by Fannie Mae or Freddie Mac prior to FHFA’s appointment as conservator or receiver, as applicable, if FHFA determines, in its sole discretion, that performance of the contract is burdensome and that repudiation of the contract promotes the orderly administration of Fannie Mae’s or Freddie Mac’s affairs. The Reform Act requires FHFA to exercise its right to repudiate any contract within a reasonable period of time after its appointment as conservator or receiver. FHFA, in its capacity as conservator, has indicated that it has no intention to repudiate the guaranty obligations of Fannie Mae or Freddie Mac because FHFA views repudiation as incompatible with the goals of the conservatorship. However, in the event that FHFA, as conservator or if it is later appointed as receiver for Fannie Mae or Freddie Mac, were to repudiate any such guaranty obligation, the conservatorship or receivership estate, as applicable, would be liable for actual direct compensatory damages in accordance with the provisions of the Reform Act. Any such liability could be satisfied only to the extent of Fannie Mae’s or Freddie Mac’s available assets. The future financial performance of Fannie Mae and Freddie Mac is heavily dependent on the performance of the U.S. housing market. See “Credit and Market Risks of Mortgage-Backed Securities” below for more information regarding the conservatorship and related risks.

Certain rights provided to holders of mortgage-backed securities issued by Fannie Mae and Freddie Mac under the operative documents related to such securities may not be enforced against FHFA, or enforcement of such rights may be delayed, during the conservatorship or any future receivership. The operative documents for Fannie Mae and Freddie Mac mortgage-backed securities may provide (or with respect to securities issued prior to the date of the appointment of the conservator may have provided) that upon the occurrence of an event of default on the part of Fannie Mae or Freddie Mac, in its capacity as guarantor, which includes the appointment of a conservator or receiver, holders of such mortgage-backed securities have the right to replace Fannie Mae or Freddie Mac as trustee if the requisite percentage of mortgage-backed security holders consent. The Reform Act prevents mortgage-backed security holders from enforcing such rights if the event of default arises solely because a conservator or receiver has been appointed. The Reform Act also provides that no person may exercise any right or power to terminate, accelerate or declare an event of default under certain contracts to which Fannie Mae or Freddie Mac is a party, or obtain possession of or exercise control over any property of Fannie Mae or Freddie Mac, or affect any contractual rights of Fannie Mae or Freddie Mac, without the approval of FHFA, as conservator or receiver, for a period of 45 or 90 days following the appointment of FHFA as conservator or receiver, respectively.

In a February 2011 report to Congress from the Treasury Department and the Department of Housing and Urban Development, the Obama administration provided a plan to reform America’s housing finance market. The plan would reduce the role of and eventually eliminate Fannie Mae and Freddie Mac. Notably, the plan does not propose similar significant changes to Ginnie Mae, which guarantees payments on mortgage-related securities backed by federally insured or guaranteed loans such as those issued by the Federal Housing Association or guaranteed by the Department of Veterans Affairs. The report also identified three proposals for Congress and the administration to consider for the long-term structure of the housing finance markets after the elimination of Fannie Mae and Freddie Mac, including implementing: (i) a privatized system of housing finance that limits government insurance to very limited groups of creditworthy low- and moderate-income borrowers; (ii) a privatized system with a government backstop mechanism that would allow the government to insure a larger share of the housing finance market during a future housing crisis; and (iii) a privatized system where the government would offer reinsurance to holders of certain highly-rated mortgage-related securities insured by private insurers and would pay out under the reinsurance arrangements only if the private mortgage insurers were insolvent.

Under the FHFA’s “Single Security Initiative,” Fannie Mae and Freddie Mac have entered into a joint initiative to develop a common securitization platform for the issuance of uniform mortgage-backed securities (“**UMBS**”), which would generally align the characteristics of Fannie Mae and Freddie Mac participation certificates. In June

2019, Fannie Mae and Freddie Mac began issuing UMBS in place of their offerings of “TBA”- eligible mortgage-backed securities. The long-term effect of the issuance of UMBS on the market for mortgage-backed securities is uncertain.

Long-term, continued operation in government-run conservatorships is not sustainable for Fannie Mae or Freddie Mac. Each of Fannie Mae and Freddie Mac has a small capital reserve, is operating on a remaining, finite financial commitment from taxpayers, and cannot rebuild capital under the terms of support from Treasury. As of the date of this SAI, there have been ongoing discussions regarding the operation of Fannie Mae and Freddie Mac; there can be no assurance as to the outcome of these discussions, nor any prediction about the resulting impact on the U.S. housing or financial markets.

Guaranteed Investment Contracts (Funding Agreements). Guaranteed investment contracts, or funding agreements, are short-term, privately placed debt instruments issued by insurance companies. Pursuant to such contracts, a Fixed Income Fund may make cash contributions to a deposit fund of the insurance company’s general account. The insurance company then credits to the Fixed Income Fund payments at negotiated, floating or fixed interest rates. In general, guaranteed investment contracts are not assignable.

Hybrid Securities. A Fixed Income Fund may acquire hybrid securities. A third party or Adviser may create a hybrid security by combining an income-producing debt security (“**income producing component**”) and the right to receive payment based on the change in the price of an equity security (“**equity component**”). The income-producing component is achieved by investing in non-convertible, income-producing securities such as bonds, preferred stocks and money market instruments, which may be represented by derivative instruments. The equity component is achieved by investing in securities or instruments such as cash-settled warrants or options to receive a payment based on whether the price of a common stock surpasses a certain exercise price, or options on a stock index. A hybrid security comprises two or more separate securities, each with its own market value. Therefore, the market value of a hybrid security is derived from the values of its income-producing component and its equity component.

A holder of a hybrid security faces the risk of a decline in the price of the security or the level of the index involved in the equity component, causing a decline in the value of the security or instrument, such as a call option or warrant, purchased to create the hybrid security. The equity component has risks typical to a purchased call option. Should the price of the stock fall below the exercise price and remain there throughout the exercise period, the entire amount paid for the call option or warrant would be lost. Because a hybrid security includes the income-producing component as well, the holder of a hybrid security also faces risks typical to all debt securities.

High Yield Securities (“Junk Bonds”). Corporate bonds and certain other fixed income instruments (for purposes of this discussion, all such instruments are herein referred to as “securities”) rated below investment grade, or such instruments that are unrated and are determined by the Adviser to be of comparable quality, are high yield, high risk bonds, commonly known as “junk bonds.” A security may be considered to be below investment grade if it is rated Ba1 by Moody’s Investors Service, Inc. (“**Moody’s**”) and BB+ by S&P Global Ratings (“**S&P**”), or lower, or the equivalent by any other nationally recognized statistical rating organization. See Appendix A for a description of these ratings.

For purposes of applying any limitations on a Fixed Income Fund’s investments in such bonds, when an investment is rated by more than one NRSRO, the Adviser will utilize the highest credit rating for that security for purposes of applying any investment policies that incorporate credit ratings (e.g., a policy to invest a certain percentage of a Fixed Income Fund’s assets in securities rated investment grade) except where the Fixed Income Fund has a policy to invest a certain minimum percentage of its assets in securities that are rated below investment grade, in which case the Fixed Income Fund will utilize the lowest credit rating that applies to that investment.

While offering a greater potential opportunity for capital appreciation and higher yields compared to higher-rated fixed income securities, high yield investments typically entail greater potential price volatility and may be less

liquid than higher-rated securities. Junk bonds and high yield investments may be regarded as predominantly speculative with respect to the issuer's continuing ability to meet principal and interest payments. Debt securities in the lowest investment grade category also may be considered to possess some speculative characteristics by certain rating agencies. In addition, analysis of the creditworthiness of issuers of high yield securities may be more complex than for issuers of higher quality securities. High yield securities may be more susceptible to real or perceived adverse economic and competitive industry conditions than investment grade securities. Issuers of securities in default may fail to resume principal or interest payments, in which case a Fixed Income Fund may lose its entire investment.

The lower ratings of certain securities held by a Fixed Income Fund reflect a greater possibility that adverse changes in the financial condition of the issuer, or in general economic conditions, or both, or an unanticipated rise in interest rates, may impair the ability of the issuer to make payments of interest and principal. The inability (or perceived inability) of issuers to make timely payment of interest and principal would likely make the values of securities held by a Fixed Income Fund more volatile and could limit the Fund's ability to sell its securities at prices approximating the values the Fund had placed on such securities. In the absence of a liquid trading market for securities held by it, the Fixed Income Fund may be unable at times to establish the fair market value of such securities. The rating assigned to a security by Moody's, S&P, or any other NRSRO does not reflect an assessment of the volatility of the security's market value or of the liquidity of an investment in the security.

Like those of other fixed-income securities, the values of lower-rated securities fluctuate in response to changes in interest rates. Thus, a decrease in interest rates generally will result in an increase in the value of the Fund's fixed-income securities. Conversely, during periods of rising interest rates, the value of the Fund's fixed-income securities generally will decline. In addition, the values of such securities are also affected by changes in general economic conditions and business conditions affecting the specific industries of their issuers. Changes by recognized rating services in their ratings of any fixed-income security and in the ability of an issuer to make payments of interest and principal may also affect the value of these investments. Changes in the values of portfolio securities generally will not affect cash income derived from such securities, but will affect the Fund's NAV.

Issuers of lower-rated securities are often highly leveraged, so that their ability to service their debt obligations during an economic downturn or during sustained periods of rising interest rates may be impaired. In addition, such issuers may not have more traditional methods of financing available to them, and may be unable to repay debt at maturity by refinancing. The risk of loss due to default in payment of interest or principal by such issuers is significantly greater because such securities frequently are unsecured and subordinated to the prior payment of senior indebtedness. Certain of the lower-rated securities in which a Fixed Income Fund may invest are issued to raise funds in connection with the acquisition of a company, in so-called leveraged buy-out transactions. The highly leveraged capital structure of such issuers may make them especially vulnerable to adverse changes in economic conditions.

Under adverse market or economic conditions or in the event of adverse changes in the financial condition of the issuer, a Fixed Income Fund could find it more difficult to sell lower-rated securities when the Adviser believes it advisable to do so or may be able to sell such securities only at prices lower than might otherwise be available. In many cases, lower-rated securities may be purchased in private placements and, accordingly, will be subject to restrictions on resale as a matter of contract or under securities laws. Under such circumstances, it may also be more difficult to determine the fair value of such securities for purposes of computing a Fixed Income Fund's NAV. In order to enforce its rights in the event of a default under lower-rated securities, a Fixed Income Fund may be required to take possession of and manage assets securing the issuer's obligations on such securities, which may increase the Fixed Income Fund's operating expenses and adversely affect the Fixed Income Fund's NAV. A Fixed Income Fund may also be limited in its ability to enforce its rights and may incur greater costs in enforcing its rights in the event an issuer becomes the subject of bankruptcy proceedings. In addition, a Fixed Income Fund's intention to qualify as a regulated investment company ("RIC") under the Internal Revenue Code of 1986, as amended (the "Code"), may limit the extent to which the Fixed Income Fund may exercise its rights by taking possession of such assets.

Certain securities held by a Fixed Income Fund may permit the issuer at its option to call, or redeem, its securities. If an issuer were to redeem securities held by a Fixed Income Fund during a time of declining interest rates, the Fixed Income Fund may not be able to reinvest the proceeds in securities providing the same investment return as the securities redeemed.

Lower-rated securities may be subject to certain risks not typically associated with investment grade securities, such as the following: (1) reliable and objective information about the value of lower rated obligations may be difficult to obtain because the market for such securities may be thinner and less active than that for investment grade obligations; (2) adverse publicity and investor perceptions, whether or not based on fundamental analysis, may decrease the values and liquidity of lower than investment grade obligations, and, in turn, adversely affect their market; (3) companies that issue lower rated obligations may be in the growth stage of their development, or may be financially troubled or highly leveraged, so they may not have more traditional methods of financing available to them; (4) when other institutional investors dispose of their holdings of lower rated debt securities, the general market and the prices for such securities could be adversely affected; and (5) the market for lower rated securities could be impaired if legislative proposals to limit their use in connection with corporate reorganizations or to limit their tax and other advantages are enacted.

Unrated Securities. Subject to its investment policies, a Fixed Income Fund may purchase unrated securities (which are not rated by a rating agency). Unrated securities may be less liquid than comparable rated securities and involve the risk that the Adviser may not accurately evaluate the security's creditworthiness. Analysis of creditworthiness of issuers of high yield securities may be more complex than for issuers of higher-quality fixed income securities. To the extent a Fixed Income Fund invests in high yield and/or unrated securities, the Fixed Income Fund's success in achieving its investment objective may depend more heavily on the Adviser's analysis than if the Fixed Income Fund invested exclusively in higher-quality and rated securities. Some or all of the unrated instruments in which a Fixed Income Fund may invest may involve credit risk comparable to or greater than that of rated debt securities of below investment grade quality.

Income Deposit Securities. A Fixed Income Fund may purchase income deposit securities ("IDSs"). Each IDS represents two separate securities, shares of common stock and subordinated notes issued by the same company, that are combined into one unit that trades like a stock on an exchange. Holders of IDSs receive dividends on the common shares and interest at a fixed rate on the subordinated notes to produce a blended yield. An IDS is typically listed on a stock exchange, but the underlying securities typically are not listed on the exchange until a period of time after the listing of the IDS or upon the occurrence of certain events (e.g., a change of control of the issuer of the IDS). When the underlying securities are listed, the holders of IDSs generally have the right to separate the components of the IDSs and trade them separately.

There may be a thinner and less active market for IDSs than that available for other securities. The value of an IDS will be affected by factors generally affecting common stock and subordinated debt securities, including the issuer's actual or perceived ability to pay interest and principal on the notes and pay dividends on the stock.

The U.S. federal income tax treatment of IDSs is not entirely clear and there is no authority that directly addresses the tax treatment of securities with terms substantially similar to IDSs. Among other things, although it is expected that the subordinated notes portion of an IDS will be treated as debt, if it were characterized as equity rather than debt, then it would be possible that the interest paid on the notes might be treated as dividends (to the extent paid out of the issuer's earnings and profits), but it is not at all clear that such dividends would qualify for favorable long-term capital gains rates currently available to dividends on other types of equity.

Indexed Securities. A Fixed Income Fund may purchase securities whose prices are indexed to the prices of other securities, securities indices, currencies, precious metals or other commodities, or other financial indicators. Indexed securities typically, but not always, are debt securities or deposits whose value at maturity or coupon rate is determined by reference to a specific instrument or statistic. Gold-indexed securities, for example, typically provide for a maturity value that depends on the price of gold, resulting in a security whose price tends

to rise and fall together with gold prices. Currency-indexed securities typically are short-term to intermediate-term debt securities whose maturity values or interest rates are determined by reference to the values of one or more specified foreign currencies, and may offer higher yields than U.S. dollar-denominated securities of equivalent issuers. Currency-indexed securities may be positively or negatively indexed; that is, their maturity value may increase when the specified currency value increases, resulting in a security whose price characteristics are similar to a put option on the underlying currency. Currency-indexed securities also may have prices that depend on the values of a number of different foreign currencies relative to each other.

The performance of indexed securities depends to a great extent on the performance of the security, currency, commodity or other instrument to which they are indexed, and also may be influenced by interest rate changes in the United States and abroad. At the same time, indexed securities are subject to the credit risks associated with the issuer of the security, and their values may decline substantially if the issuer's creditworthiness deteriorates. Recent issuers of indexed securities have included banks, corporations, and certain U.S. government agencies.

Inflation-Protected Securities. A Fixed Income Fund may invest in U.S. Treasury Inflation Protected Securities ("U.S. TIPS"), which are fixed income securities issued by the U.S. Department of Treasury, the principal amounts of which are adjusted daily based upon changes in the rate of inflation. A Fixed Income Fund may also invest in other inflation-protected securities issued by non-U.S. governments or by private issuers. U.S. TIPS pay interest on a semi-annual basis, equal to a fixed percentage of the inflation-adjusted principal amount. The interest rate on these bonds is fixed at issuance, but over the life of the bond this interest may be paid on an increasing or decreasing principal value that has been adjusted for inflation.

Repayment of the original bond principal upon maturity (as adjusted for inflation) is guaranteed for U.S. TIPS, even during a period of deflation. However, because the principal amount of U.S. TIPS would be adjusted downward during a period of deflation, a Fixed Income Fund will be subject to deflation risk with respect to its investments in these securities. In addition, the current market value of the bonds is not guaranteed, and will fluctuate. If a Fixed Income Fund purchases in the secondary market U.S. TIPS whose principal values have been adjusted upward due to inflation since issuance, the Fixed Income Fund may experience a loss if there is a subsequent period of deflation. A Fixed Income Fund may also invest in other inflation-related bonds which may or may not provide a guarantee of principal. If a guarantee of principal is not provided, the adjusted principal value of the bond repaid at maturity may be less than the original principal amount.

The periodic adjustment of U.S. TIPS is currently tied to the CPI-U, which is calculated by the U.S. Department of Treasury. The CPI-U is a measurement of changes in the cost of living, made up of components such as housing, food, transportation and energy. Inflation-protected bonds issued by a non-U.S. government are generally adjusted to reflect a comparable inflation index, calculated by that government. There can be no assurance that the CPI-U or any non-U.S. inflation index will accurately measure the real rate of inflation in the prices of goods and services. If interest rates rise due to reasons other than inflation (for example, due to changes in currency exchange rates), investors in these securities may not be protected to the extent that the increase is not reflected in the bond's inflation measure. In addition, there can be no assurance that the rate of inflation in a non-U.S. country will be correlated to the rate of inflation in the United States.

In general, the value of inflation-protected bonds is expected to fluctuate in response to changes in real interest rates, which are in turn tied to the relationship between nominal interest rates and the rate of inflation. Therefore, if inflation were to rise at a faster rate than nominal interest rates, real interest rates might decline, leading to an increase in value of inflation-protected bonds. In contrast, if nominal interest rates increased at a faster rate than inflation, real interest rates might rise, leading to a decrease in value of inflation-protected bonds. If inflation is lower than expected during the period a Fixed Income Fund holds the security, the Fixed Income Fund may earn less on the security than on a conventional bond. Any increase in principal value is taxable in the year the increase occurs, even though holders do not receive cash representing the increase at that time. As a result, if the Fixed Income Fund invests in inflation-protected securities, it could be required at times to liquidate other investments, including when it is not advantageous to do so, in order to satisfy its distribution requirements as a RIC and to eliminate any fund-level income tax liability under the Code.

Infrastructure Investments. A Fixed Income Fund may invest in securities and other obligations of U.S. and non-U.S. issuers providing exposure to infrastructure investments. Infrastructure investments include, without limitation, fixed or floating-rate debt instruments or loans issued to finance (or re-finance) the ownership, development, construction, maintenance, renovation, enhancement, or operation of infrastructure assets. Infrastructure investments also include investments in the debt securities of or loans made to issuers of various types including issuers that invest in, own or hold infrastructure assets; or issuers that operate infrastructure assets or provide services, products or raw materials related to the development, construction, maintenance, renovation, enhancement or operation of infrastructure assets. Issuers in which a Fixed Income Fund may invest may include, among others, operating companies, special purpose vehicles, including vehicles created to hold or finance infrastructure assets, municipal issuers, and government-related issuers.

Infrastructure investments include assets or projects that support the operation, function, growth or development of a community or economy. The infrastructure assets to which a Fixed Income Fund may have exposure, directly or indirectly, include, without limitation, those related to transportation (*e.g.*, airports, metro systems, subways, railroads, ports, toll roads, airplanes); electric utilities and power (*e.g.*, power generation, transmission and distribution); energy (*e.g.*, exploration & production, pipeline, storage, refining and distribution of energy); renewable energies (*e.g.*, wind, solar, hydro, geothermal); communication networks and equipment; water and sewage treatment; social infrastructure (*e.g.*, health care facilities, government accommodations, and other public service facilities); metals and mining; and shipping, cement, steel, and other resources and services related to infrastructure assets (*e.g.*, chemical companies).

The values of a Fixed Income Fund's infrastructure investments may be entirely dependent upon the successful development, construction, maintenance, renovation, enhancement or operation of infrastructure assets or infrastructure-related projects. Accordingly, a Fixed Income Fund may have significant exposure to adverse economic, regulatory, political, legal, demographic, environmental and other developments affecting the success of the infrastructure assets or projects in which it directly or indirectly invests.

Initial Public Offerings. A Fixed Income Fund may purchase debt or equity securities in initial public offerings ("IPOs"). These securities, which are often issued by unseasoned companies, may be subject to many of the same risks of investing in companies with smaller market capitalizations. Securities issued in IPOs have no trading history, and information about the companies may be available for very limited periods. Securities issued in an IPO frequently are very volatile in price, and the Fixed Income Fund may hold securities purchased in an IPO for a very short period of time. As a result, the Fixed Income Fund's investments in IPOs may increase portfolio turnover, which increases brokerage and administrative costs and may result in distributions taxable to shareholders subject to tax.

At any particular time or from time to time a Fixed Income Fund may not be able to invest in securities issued in IPOs, or invest to the extent desired because, for example, only a small portion (if any) of the securities being offered in an IPO may be made available to the Fixed Income Fund. In addition, under certain market conditions a relatively small number of companies may issue securities in IPOs. Similarly, as the number of funds advised by the Adviser to which IPO securities are allocated increases, the number of securities issued to any one fund may decrease. The investment performance of a Fixed Income Fund during periods when it is unable to invest significantly or at all in IPOs may be lower than during periods when the Fixed Income Fund is able to do so. In addition, as a Fixed Income Fund increases in size, the impact of IPOs on the Fixed Income Fund's performance will generally decrease. There can be no assurance that investments in IPOs will be available to a Fixed Income Fund or improve its performance.

Inverse Floaters. An inverse floater is a type of instrument that bears a floating or variable interest rate that moves in the opposite direction to interest rates generally or the interest rate on another security or index. Changes in interest rates generally, or the interest rate of the other security or index, inversely affect the interest rate paid on the inverse floater, with the result that the inverse floater's price will be considerably more volatile than that of a fixed-rate bond. Brokers typically create inverse floaters by depositing an income-producing

instrument, which may be a mortgage-backed security, in a trust. The trust in turn issues a variable rate security and inverse floaters. The returns on the inverse floaters may be leveraged, increasing substantially their volatility and interest rate sensitivity. The rate at which interest is paid by the trust on an inverse floater may vary by a magnitude that exceeds the magnitude of the change in a reference rate of interest (typically a short term interest rate), and the market prices of inverse floaters may as a result be highly sensitive to changes in interest rates and in prepayment rates on the underlying securities, and may decrease in value significantly when interest rates or prepayment rates change. The interest rate for the variable rate security is typically determined by an index or an auction process, while the inverse floater holder receives the balance of the income from the underlying income-producing instrument less an auction fee.

Loans, Assignments, and Participations. A Fixed Income Fund may make loans and may acquire or invest in loans made by others. A Fixed Income Fund may acquire a loan interest directly by acting as a member of the original lending syndicate. Alternatively, a Fixed Income Fund may acquire some or all of the interest of a bank or other lending institution in a loan to a particular borrower, by means of an assignment or a participation. In an assignment, a Fixed Income Fund assumes all of the rights of a lending institution in a loan, including the right to receive payments of principal and interest and other amounts directly from the borrower and to enforce its rights as a lender directly against the borrower. The Fixed Income Fund assumes the position of a co-lender with other syndicate members. As an alternative, a Fixed Income Fund may purchase a participating interest in a portion of the rights of a lending institution in a loan. In such case, the Fixed Income Fund will generally be entitled to receive from the lending institution amounts equal to the payments of principal, interest and premium, if any, on the loan received by the institution, but will not generally be entitled to enforce its rights directly against the agent bank or the borrower, and must rely for that purpose on the lending institution. In the case of a participation, the value of the Fixed Income Fund's loan investment will depend at least in part on the credit standing of the assigning or participating institution. The loans in which a Fixed Income Fund may invest include those that pay fixed rates of interest and those that pay floating rates – *i.e.*, rates that adjust periodically based on a known lending rate, such as a bank's prime rate. Investments in loans may be of any quality, including "distressed" loans. A Fixed Income Fund also may gain exposure to loans and related investments through the use of total and excess return swaps and/or other derivative instruments and through private funds and other pooled investment vehicles, including other DoubleLine funds (see "Derivatives").

Many loans are made by a syndicate of banks, represented by an agent bank (the "**Agent**") which has negotiated and structured the loan and which is responsible generally for collecting interest, principal, and other amounts from the borrower on its own behalf and on behalf of the other lending institutions in the syndicate (the "**Lenders**"), and for enforcing its and their other rights against the borrower. Each of the lending institutions, which may include the Agent, lends to the borrower a portion of the total amount of the loan, and retains the corresponding interest in the loan. Unless, under the terms of the loan or other indebtedness, a Fixed Income Fund has direct recourse against the borrower, the Fixed Income Fund may have to rely on the Agent or other financial intermediary to apply appropriate credit remedies against a borrower.

A Fixed Income Fund's ability to receive payments of principal and interest and other amounts in connection with loan participations held by it will depend primarily on the financial condition of the borrower (and, in some cases, the lending institution from which it purchases the loan). The value of collateral, if any, securing a loan can decline, or may be insufficient to meet the borrower's obligations or may be difficult to liquidate. In addition, a Fixed Income Fund's access to collateral may be limited by bankruptcy or other insolvency laws. The failure by a Fixed Income Fund to receive scheduled interest or principal payments on a loan would adversely affect the income of the Fixed Income Fund and would likely reduce the value of its assets, which would be reflected in a reduction in the Fixed Income Fund's NAV. Loans that are fully secured offer a Fixed Income Fund more protection than an unsecured loan in the event of non-payment of scheduled interest or principal. However, there is no assurance that the liquidation of collateral from a secured loan would satisfy the corporate borrower's obligation, or that the collateral can be liquidated. Indebtedness of companies whose creditworthiness is poor involves substantially greater risks and may be highly speculative. Some companies may never pay off their

indebtedness or may pay only a small fraction of the amount owed. Consequently, when investing in indebtedness of companies with poor credit, a Fixed Income Fund bears a substantial risk of losing the entire amount invested.

Banks and other lending institutions generally perform a credit analysis of the borrower before originating a loan or participating in a lending syndicate. In selecting the loans in which a Fixed Income Fund will invest, however, the Adviser will not rely solely on that credit analysis but will perform its own investment analysis of the borrowers. The Adviser's analysis may include consideration of the borrower's financial strength and managerial experience, debt coverage, additional borrowing requirements or debt maturity schedules, changing financial conditions, and responsiveness to changes in business conditions and interest rates. Because loans in which a Fixed Income Fund may invest may not be rated by independent credit rating agencies, a decision by a Fixed Income Fund to invest in a particular loan may depend heavily on the Adviser's or the original lending institution's credit analysis of the borrower.

Some of the loans in which a Fixed Income Fund may invest or to which the Fixed Income Fund may gain exposure through its investments in CDOs, CLOs or other types of structured securities may be covenant-lite loans, which contain fewer or less restrictive constraints on the borrower than certain other types of loans. Covenant-lite loans generally do not include terms which allow the lender to monitor the performance of the borrower and declare a default or force a borrower into bankruptcy restructuring if certain criteria are breached. Under such loans, lenders typically must rely on covenants that restrict a company from incurring additional debt or engaging in certain actions. Such covenants can only be breached by an affirmative action of the borrower, rather than by a deterioration in the borrower's financial condition. Accordingly, a Fixed Income Fund may have fewer rights against a borrower when it invests in or has exposure to such loans and, accordingly, may have a greater risk of loss on such investments as compared to investments in or exposure to loans with additional or more conventional covenants.

Loans and other types of direct indebtedness may not be readily marketable and may be subject to restrictions on resale. In some cases, negotiations involved in disposing of indebtedness may require weeks to complete. Consequently, some indebtedness may be difficult or impossible to dispose of readily at what the Adviser believes to be a fair price. Additionally, even where there is a market for certain loans the settlement period may be extended, up to several weeks or longer. That means a Fixed Income Fund may have a limited ability to receive payment promptly on the sale of some of the loans in its portfolio. In addition, valuation of illiquid indebtedness involves a greater degree of judgment in determining a Fixed Income Fund's NAV than if that value were based on available market quotations, and could result in significant variations in the Fixed Income Fund's daily share price. At the same time, some loan interests are traded among certain financial institutions and accordingly may be deemed liquid. The Adviser will determine the liquidity of a Fixed Income Fund's investments by reference to, among other things, market conditions and contractual provisions. Assignments and participations are generally not registered under the Securities Act, and thus investments in them may be limited by a Fixed Income Fund's limitations on investment in illiquid securities.

Investments in loans through a direct loan may involve additional risks to a Fixed Income Fund. For example, if a loan is foreclosed, a Fixed Income Fund could become part owner of any collateral, and would bear the costs and liabilities associated with owning and disposing of the collateral. In addition, it is conceivable that under emerging legal theories of lender liability, a Fixed Income Fund could be held liable as co-owner. Lender liability may be founded upon the premise that an institutional lender has violated a duty of good faith and fair dealing owed to the borrower or has assumed a degree of control over the borrower resulting in creation of a fiduciary duty owed to the borrower or its other creditors or shareholders. In addition, courts have in some cases applied the doctrine of equitable subordination to subordinate the claim of a lending institution against a borrower to claims of other creditors of the borrower when the lending institution is found to have engaged in unfair, inequitable, or fraudulent conduct.

From time to time, loans or assignment or participation interests therein acquired by a Fixed Income Fund, or to which the Fixed Income Fund may have direct or indirect investment exposure, will at the time of their

acquisition be, or may become after acquisition, non-performing for a wide variety of reasons. Non-performing loans include mortgages where the borrower is in default or is or has been delinquent as to the payment of interest and/or principal, including, potentially, for a significant period of time. Such non-performing loans could require a substantial amount of workout negotiations and/or restructuring, which could entail, among other things, a substantial reduction in the interest rate and a substantial write down of the principal of such loans. Even if a restructuring were successfully accomplished, a risk exists that upon maturity of such a loan, replacement “takeout” financing will not be available.

Loans and certain other forms of direct indebtedness may not be classified as “securities” under the federal securities laws and, therefore, purchasers of such instruments may not be entitled to the protections against fraud and misrepresentation contained in the federal securities laws.

It is the position of the SEC that, in the case of loan participations or assignments where a bank or other lending institution serves as a financial intermediary between a Fixed Income Fund and the corporate borrower, if the participation does not shift to the Fixed Income Funds the direct debtor-creditor relationship with the borrower, the Fixed Income Fund should treat both the lending bank or other lending institution and the borrower as “issuers.” If and to the extent a Fixed Income Fund treats a financial intermediary as an issuer of indebtedness, the Fixed Income Fund may in certain circumstances be limited in its ability to invest in indebtedness related to a single financial intermediary, or a group of intermediaries engaged in the same industry, even if the underlying borrowers represent many different companies and industries.

Economic exposure to loan interests through the use of derivative transactions, including, among others, total and excess return swaps, may involve greater risks than if a Fixed Income Fund had invested in the loan interest directly during a primary distribution or through assignments of, or participations in, a bank loan acquired in secondary markets since, in addition to the risks described above, certain derivative transactions may be subject to leverage risk and greater illiquidity risk, counterparty risk, valuation risk and other risks.

In managing the Fixed Income Funds, the Adviser may seek to avoid the receipt of material, non-public information (“**Confidential Information**”) about the issuers of floating rate loans or other investments being considered for acquisition by a Fixed Income Fund or held in a Fixed Income Fund’s portfolio if the receipt of the Confidential Information would restrict one or more of the Adviser’s clients, including, potentially, a Fixed Income Fund, from trading in securities they hold or in which they may invest. In many instances, issuers offer to furnish Confidential Information to prospective purchasers or holders of the issuer’s loans or other securities. In circumstances when the Adviser declines to receive Confidential Information from these issuers, a Fixed Income Fund may be disadvantaged in comparison to other investors, including with respect to evaluating the issuer and the price the Fixed Income Fund would pay or receive when it buys or sells those investments, and the Fixed Income Fund may not take advantage of investment opportunities that it otherwise might have if it had received such Confidential Information. Further, in situations when a Fixed Income Fund is asked, for example, to grant consents, waivers or amendments with respect to such investments, the Adviser’s ability to assess such consents, waivers and amendments may be compromised. In certain circumstances, the Adviser may determine to receive Confidential Information, including on behalf of clients other than the Fixed Income Funds. Receipt of Confidential Information by the Adviser could limit a Fixed Income Fund’s ability to sell certain investments held by the Fixed Income Fund or pursue certain investment opportunities on behalf of the Fixed Income Fund, potentially for a substantial period of time. In certain situations, the Adviser may create information walls around persons having access to the Confidential Information to limit the restrictions on others at the Adviser. Those measures could impair the ability of those persons to assist in managing a Fixed Income Fund. Also, certain issuers of senior floating rate loans, other bank loans and related investments may not have any publicly traded securities and may offer private information pursuant to confidentiality agreements or similar arrangements. The Adviser may access such private information, while recognizing that the receipt of that information could potentially limit a Fixed Income Fund’s ability to trade in certain securities if the Private Issuer later issues publicly traded securities. If the Adviser intentionally or unintentionally comes into possession of Confidential Information, it may be unable, potentially for a substantial period of time, to sell certain investments held by the Fixed Income Fund.

The Adviser is, and may be in the future, affiliated with certain large financial institutions (“**affiliates**”) that hold interests in an entity that are of a different class or type than the class or type of interest held by a Fixed Income Fund. For example, an affiliate may hold securities in an entity that are senior or junior to the securities held by a Fixed Income Fund, which could mean that the affiliate will be entitled to different payments or other rights, or that in a workout or other distressed scenario the interests of the affiliate might be adverse to those of the Fixed Income Fund and the affiliate might recover all or part of its investment while the Fixed Income Fund might not. Conflicts also will arise in cases where a Fixed Income Fund and affiliates invest in different parts of an issuer’s capital structure, including circumstances in which one or more affiliates may own private securities or obligations of an issuer and the Fixed Income Fund may own public securities of the same issuer. For example, an affiliate may acquire a loan, loan participation, or a loan assignment of a particular borrower in which a Fixed Income Fund has an equity investment. In negotiating the terms and conditions of any such investments, or any subsequent amendments or waivers, the Adviser may find that its own interests, the interests of an affiliate, and/or the interests of the Fixed Income Fund could conflict. The Adviser may seek to avoid such conflicts, and, as a result, the Adviser may choose not to make such investments on behalf of a Fixed Income Fund. Those foregone investment opportunities may adversely affect a Fixed Income Fund’s performance if similarly attractive opportunities are not available or cannot be identified.

Lending Fees. In the process of buying, selling and holding loans, a Fixed Income Fund may receive and/or pay certain fees. These fees are in addition to interest payments received and may include facility fees, commitment fees, commissions and prepayment penalty fees. When a Fixed Income Fund buys a loan, it may receive a facility fee and when it sells a loan it may pay a facility fee. On an ongoing basis, a Fixed Income Fund may receive a commitment fee based on the undrawn portion of the underlying line of credit portion of the loan. In certain circumstances, a Fixed Income Fund may receive a prepayment penalty fee upon the prepayment of a loan by a borrower. Other fees received by a Fixed Income Fund may include covenant waiver fees and covenant modification fees.

Borrower Covenants. A borrower under a loan may be required to comply with various restrictive covenants contained in a loan agreement or note purchase agreement between the borrower and the Lender or lending syndicate (the “**Loan Agreement**”). Such covenants, in addition to requiring the scheduled payment of interest and principal, may include restrictions on dividend payments and other distributions to stockholders, provisions requiring the borrower to maintain specific minimum financial ratios and limits on total debt. In addition, the Loan Agreement may contain a covenant requiring the borrower to prepay the loan with a certain portion of excess cash flow. Excess cash flow is generally defined as net income after scheduled debt service payments, taxes paid in cash and permitted capital expenditures but before depreciation and amortization among other adjustments. A breach of a covenant which is not waived by the Agent, or by the lenders directly, as the case may be, is normally an event of acceleration; *i.e.*, the Agent, or the lenders directly, as the case may be, has the right to call the outstanding loan. The typical practice of an Agent or a Lender in relying exclusively or primarily on reports from the borrower may involve a risk of fraud by the borrower. In the case of a loan in the form of a participation, the agreement between the buyer and seller may limit the rights of the participant to vote on certain changes which may be made to the Loan Agreement, such as waiving a breach of a covenant.

Some or all of the loans in which a Fixed Income Fund may invest or to which the Fixed Income Fund may obtain exposure may contain fewer or less restrictive constraints on the borrower than certain other types of loans (“**covenant-lite**” loans). Please see “Loan Risk --Restrictive Loan Covenants” below for more information.

Administration of Loans. In certain loans, the Agent administers the terms of the Loan Agreement. In such cases, the Agent is normally responsible for the collection of principal and interest payments from the borrower and the apportionment of these payments to the credit of all institutions which are parties to the Loan Agreement. A Fixed Income Fund will generally rely upon the Agent or an intermediate participant to receive and forward to the Fixed Income Fund its portion of the principal and interest payments on the loan. Furthermore, unless under the terms of a participation agreement a Fixed Income Fund has direct recourse against the borrower, the Fixed Income Fund will rely on the Agent and the other members of the lending syndicate to use appropriate credit

remedies against the borrower. The Agent is typically responsible for monitoring compliance with covenants contained in the Loan Agreement based upon reports prepared by the borrower. The Agent usually does, but is often not obligated to, notify holders of loans of any failures of compliance. In certain loans such as asset-backed loans, the Agent may monitor the value of the collateral, if any, and if the value of such collateral declines, may accelerate the loan, may give the borrower an opportunity to provide additional collateral or may seek other protection for the benefit of the participants in the loan. The Agent is compensated by the borrower for providing these services under a Loan Agreement, and such compensation may include special fees paid upon structuring and funding the loan and other fees paid on a continuing basis. With respect to loans for which the Agent does not perform such administrative and enforcement functions, the Adviser will perform such tasks on behalf of a Fixed Income Fund, although a collateral bank will typically hold any collateral on behalf of the Fixed Income Fund and the other lenders pursuant to the applicable Loan Agreement.

A financial institution's appointment as Agent may usually be terminated in the event that it fails to observe the requisite standard of care or becomes insolvent, enters Federal Deposit Insurance Corporation ("FDIC") receivership, or, if not FDIC insured, enters into bankruptcy or insolvency proceedings. A successor Agent would generally be appointed to replace the terminated Agent, and assets held by the Agent under the Loan Agreement should remain available to holders of loans. However, if assets held by the Agent for the benefit of a Fixed Income Fund were determined to be subject to the claims of the Agent's general creditors, the Fixed Income Fund might incur certain costs and delays in realizing payment on a loan, or suffer a loss of principal and/or interest. In situations involving other intermediate participants similar risks may arise.

Prepayments. Loans may require, in addition to scheduled payments of interest and principal, the prepayment of the loan from free cash flow, as defined above. The degree to which borrowers prepay loans, whether as a contractual requirement or at their election, may be affected by general business conditions, the financial condition of the borrower and competitive conditions among lenders, among others. As such, prepayments cannot be predicted with accuracy. Upon a prepayment, either in part or in full, the actual outstanding debt on which a Fixed Income Fund derives interest income will be reduced. However, a Fixed Income Fund may, but will not necessarily, receive both a prepayment penalty fee from the prepaying borrower and a facility fee upon the purchase of a new loan with the proceeds from the prepayment of the former.

Bridge Financings. Loans may be designed to provide temporary or "bridge" financing to a borrower pending the sale of identified assets or the arrangement of longer-term loans or the issuance and sale of debt obligations. Loans may also be obligations of borrowers who have obtained bridge loans from other parties. A borrower's use of bridge loans involves a risk that the borrower may be unable to locate permanent financing to replace the bridge loan, which may impair the borrower's perceived creditworthiness or its willingness or ability to repay the bridge loan.

Senior Loans. Senior floating rate loans may be made to or issued by U.S. or non-U.S. banks or other corporations ("**Senior Loans**"). Senior Loans include senior floating rate loans and institutionally traded senior floating rate debt obligations issued by asset-backed pools and other issues, and interests therein. Senior Loan interests may be acquired from U.S. or foreign commercial banks, insurance companies, finance companies or other financial institutions that have made loans or are members of a lending syndicate or from other holders of loan interests. Senior Loans typically pay interest at rates which are re-determined periodically on the basis of a floating base lending rate plus a premium. Senior Loans generally (but not always) hold the most senior position in the capital structure of a borrower and, if below investment grade quality, are often secured with collateral.

From time to time, the Adviser and their related parties may borrow money from various banks in connection with their business activities. Such banks may also sell Senior Loans to or acquire them from a Fixed Income Fund or may be intermediate participants with respect to Senior Loans in which the Fixed Income Fund owns interests. Such banks may also act as Agents for Senior Loans held by a Fixed Income Fund.

To the extent that the collateral, if any, securing a Senior Loan consists of the stock of the borrower's subsidiaries or other affiliates, a Fixed Income Fund will be subject to the risk that this stock will decline in

value. Such a decline, whether as a result of bankruptcy proceedings or otherwise, could cause the Senior Loan to be undercollateralized or unsecured. In most credit agreements there is no requirement to pledge additional collateral. In addition, a Senior Loan may be guaranteed by, or fully secured by assets of, shareholders or owners, even if the Senior Loans are not otherwise collateralized by assets of the borrower. There may be temporary periods when the principal asset held by a borrower is the stock of a related company, which may not legally be pledged to secure a secured Senior Loan. On occasions when such stock cannot be pledged, the secured Senior Loan will be temporarily unsecured until the stock can be pledged or is exchanged for or replaced by other assets, which will be pledged as security for such Senior Loan. However, the borrower's ability to dispose of such securities, other than in connection with such pledge or replacement, will be strictly limited for the protection of the holders of secured Senior Loans.

If a borrower becomes involved in bankruptcy proceedings, a court under certain circumstances potentially could invalidate a Fixed Income Fund's security interest in any loan collateral or subordinate the Fixed Income Fund's rights under a secured Senior Loan to the interests of the borrower's unsecured creditors. Such action by a court could be based, for example, on a "fraudulent conveyance" claim to the effect that the borrower did not receive "reasonably equivalent value" for granting the security interest in the loan collateral to a Fixed Income Fund. For secured Senior Loans made in connection with a highly leveraged transaction, consideration for granting a security interest may be deemed inadequate if the proceeds of such loan were not received or retained by the borrower, but were instead paid to other persons, such as shareholders of the borrower, in an amount which left the borrower insolvent or without sufficient working capital. There are also other events, such as the failure to perfect a security interest due to faulty documentation or faulty official filings, which could lead to the invalidation of a Fixed Income Fund's security interest in any loan collateral. If a Fixed Income Fund's security interest in loan collateral is invalidated or a secured Senior Loan is subordinated to other debt of a borrower in bankruptcy or other proceedings, it is unlikely that the Fixed Income Fund would be able to recover the full amount of the principal and interest due on the secured Senior Loan.

Loan Pool Investments. A Fixed Income Fund may invest in pools of loans through a trust or other entity that issues interests in the loans, some of which may be senior to others. Alternatively, a Fixed Income Fund may invest directly in a pool of loans, itself or with other clients of the Adviser or their related parties. A Fixed Income Fund's direct investments in pools of loans present risks that may differ from the Fixed Income Fund's investments in mortgage and other asset-backed securities. For example, if it were to invest directly in such pools, a Fixed Income Fund would share in all losses incurred on the loans in the pool. However, if a Fixed Income Fund were to invest in a senior tranche of a mortgage- or other asset-backed security, it might have a more limited exposure to losses on the loans. In connection with a Fixed Income Fund's purchase of certain loan portfolios, the Fixed Income Fund will incur costs, which may include the costs of various diligence-related services. The diligence-related services a Fixed Income Fund may require in connection with such investments may include, without limitation, loan file review, underwriting documentation review, and site visits. The Adviser would typically rely on information and analysis provided by these diligence-related services in determining whether to invest in a particular loan portfolio. The costs associated with investments in a pool of loans may be significant and will reduce the performance contribution of such loans and, potentially, a Fixed Income Fund's performance.

Master Limited Partnerships. A Fixed Income Fund may invest in master limited partnerships ("MLPs"), which are limited partnerships in which ownership units are publicly traded. MLPs often own or own interests in properties or businesses that are related to oil and gas industries, including pipelines, although MLPs may invest in other types of investments, including credit-related investments. Generally, an MLP is operated under the supervision of one or more managing general partners. Limited partners (like a Fixed Income Fund when it invests in an MLP) are not involved in the day-to-day management of the partnership. A Fixed Income Fund also may invest in companies who serve (or whose affiliates serve) as the general partner of an MLP.

Investments in MLPs are generally subject to many of the risks that apply to partnerships. For example, holders of the units of MLPs may have limited control and limited voting rights on matters affecting the partnership. There may be fewer corporate protections afforded investors in an MLP than investors in a corporation. Conflicts of interest may exist among unit holders, subordinated unit holders and the general partner of an MLP, including those arising from incentive distribution payments. MLPs that concentrate in a particular industry or region are subject to risks associated with such industry or region. MLPs holding credit-related investments are subject to interest rate risk and the risk of default on payment obligations by debt issuers. Investments held by MLPs may be illiquid. MLP units may trade infrequently and in limited volume, and they may be subject to more abrupt or erratic price movements than securities of larger or more broadly based companies.

A Fixed Income Fund may also hold investments in limited liability companies that have many of the same characteristics and are subject to many of the same risks as master limited partnerships.

The manner and extent of a Fixed Income Fund's investments in MLPs and limited liability companies may be limited by its intention to qualify as a RIC under the Code, and any such investments by the Fixed Income Fund may adversely affect the ability of the Fixed Income Fund to so qualify. Subject to any future regulatory guidance to the contrary, any distribution of income attributable to qualified publicly traded partnership income from a Fixed Income Fund's investment in an MLP will ostensibly not qualify for the deduction that would be available to a non-corporate shareholder were the shareholder to own such MLP directly.

Mezzanine Loans. A Fixed Income Fund may also originate or invest in mezzanine loans, which are loans that are subordinate in the capital structure of the borrower, meaning that there may be significant indebtedness ranking ahead of the borrower's obligation to that Fixed Income Fund in the event of the borrower's insolvency. Such loans may be collateralized with tangible fixed assets such as real property or interests in real property, or may be uncollateralized. As with other loans to corporate borrowers, repayment of a mezzanine loan is dependent on the successful operation of the borrower. Mezzanine loans may also be affected by the successful operation of other properties, the interests in which are not pledged to secure the mezzanine loan.

While mezzanine investments may benefit from the same or similar financial and other covenants as those enjoyed by the indebtedness ranking ahead of the mezzanine investments and may benefit from cross-default provisions and security over the borrower's assets, some or all of such terms may not apply to particular mezzanine investments. Mezzanine investments generally are subject to various risks including, without limitation, (i) a subsequent characterization of an investment as a "fraudulent conveyance"; (ii) the recovery as a "preference" of liens perfected or payments made on account of a debt incurred in the 90 days before a bankruptcy filing; (iii) equitable subordination claims by other creditors; (iv) so-called "lender liability" claims by the issuer of the obligations; and (v) environmental liabilities that may arise with respect to collateral securing the obligations. In addition to interest, a Fixed Income Fund may receive origination fees, extension fees, modification or similar fees in connection with investments in mezzanine loans.

Mortgage-backed and Asset-backed Securities. A Fixed Income Fund may invest in mortgage-backed and asset-backed securities. Mortgage-backed securities, including CMOs and certain stripped mortgage-backed securities, represent a participation in, or are secured by, mortgage loans. Asset-backed securities are structured like mortgage-backed securities, but instead of mortgage loans or interests in mortgage loans, the underlying assets may include a wide variety of items, including, without limitation, motor vehicle installment sales or installment loan contracts, leases of various types of real, personal and other property (including those relating to aircrafts, containers, railroads, telecommunication, energy, and/or other infrastructure assets and infrastructure-related assets), receivables from credit card agreements and automobile finance agreements, home equity sharing agreements, student loans, consumer loans, home equity loans, mobile home loans, boat loans, and income from other non-mortgage-related income streams, such as income from business and small business loans, project finance loans, renewable energy projects, personal financial assets, timeshare receivables and franchise rights. The cash flow generated by the underlying assets is applied to make required payments on the securities and to pay related administrative expenses. The amount of residual cash flow

resulting from a particular issue of asset-backed or mortgage-backed securities depends on, among other things, the characteristics of the underlying assets, the coupon rates on the securities, prevailing interest rates, the amount of administrative expenses and the actual prepayment experience on the underlying assets. A Fixed Income Fund may each invest in any such instruments or variations as may be developed, to the extent consistent with its investment objectives and policies and applicable regulatory requirements. In general, the collateral supporting asset-backed securities is of a shorter maturity than mortgage loans and is likely to experience substantial prepayments.

Mortgage-backed securities have yield and maturity characteristics corresponding to the underlying assets. Unlike traditional debt securities, which may pay a fixed rate of interest until maturity, when the entire principal amount comes due, payments on certain mortgage-backed securities include both interest and a partial repayment of principal. Besides the scheduled repayment of principal, repayments of principal may result from the voluntary prepayment, refinancing or foreclosure of the underlying mortgage loans. If property owners make unscheduled prepayments of their mortgage loans, these prepayments will result in early payment of the applicable mortgage-backed securities. In that event a Fixed Income Fund may be unable to invest the proceeds from the early payment of the mortgage-backed securities in an investment that provides as high a yield as the mortgage-backed securities. Consequently, early payment associated with mortgage-backed securities may cause these securities to experience significantly greater price and yield volatility than that experienced by traditional fixed-income securities. The occurrence of mortgage prepayments is affected by factors including the level of interest rates, general economic conditions, the location and age of the mortgage and other social and demographic conditions. During periods of falling interest rates, the rate of mortgage prepayments tends to increase, thereby tending to decrease the life of mortgage-backed securities, which may result in a Fixed Income Fund having to reinvest proceeds in other investments with a lower interest rate. During periods of rising interest rates, the rate of mortgage prepayments usually decreases, thereby tending to increase the life of mortgage-backed securities, which may lock in a below-market interest rate and reduce the value of the security. If the life of a mortgage-backed security is inaccurately predicted, a Fixed Income Fund may not be able to realize the rate of return it expected.

Adjustable rate mortgage securities (“ARMs”), like traditional mortgage-backed securities, are interests in pools of mortgage loans that provide investors with payments consisting of both principal and interest as mortgage loans in the underlying mortgage pool are paid off by the borrowers. Unlike fixed-rate mortgage-backed securities, ARMs are collateralized by or represent interests in mortgage loans with variable rates of interest. These interest rates are reset at periodic intervals, usually by reference to an interest rate index or market interest rate. Although the rate adjustment feature may act as a buffer to reduce sharp changes in the value of adjustable rate securities, these securities are still subject to changes in value based on, among other things, changes in market interest rates or changes in the issuer’s creditworthiness. Because the interest rates are reset only periodically, changes in the interest rate on ARMs may lag changes in prevailing market interest rates. Also, some ARMs (or the underlying mortgages) are subject to caps or floors that limit the maximum change in the interest rate during a specified period or over the life of the security. As a result, changes in the interest rate on an ARM may not fully reflect changes in prevailing market interest rates during certain periods.

A Fixed Income Fund may also invest in hybrid ARMs, whose underlying mortgages combine fixed-rate and adjustable-rate features.

Mortgage-backed and asset-backed securities are less effective than other types of securities as a means of locking in attractive long-term interest rates. One reason is the need to reinvest prepayments of principal; another is the possibility of significant unscheduled prepayments resulting from declines in interest rates. These prepayments would have to be reinvested at lower rates. The automatic interest rate adjustment feature of mortgages underlying ARMs likewise reduces the ability to lock-in attractive rates. As a result, mortgage-backed and asset-backed securities may have less potential for capital appreciation during periods of declining interest rates than other securities of comparable maturities, although they may have a similar risk of decline in market value during periods of rising interest rates. Prepayments may also significantly shorten the effective maturities of these securities, especially during periods of declining interest rates. Conversely, during periods of rising

interest rates, a reduction in prepayments may increase the effective maturities of these securities, subjecting them to a greater risk of decline in market value in response to rising interest rates than traditional debt securities, and, therefore, potentially increasing the volatility of a Fixed Income Fund.

At times, some mortgage-backed and asset-backed securities will have higher than market interest rates and therefore will be purchased at a premium above their par value. Prepayments may cause losses on securities purchased at a premium.

CMOs may be issued by a U.S. government agency or instrumentality or by a private issuer. Although payment of the principal of, and interest on, the underlying collateral securing privately issued CMOs may be guaranteed by the U.S. government or its agencies or instrumentalities, these CMOs represent obligations solely of the private issuer and are not insured or guaranteed by the U.S. government, its agencies or instrumentalities or any other person or entity. Government-related guarantors (*i.e.*, not backed by the full faith and credit of the U.S. government) include Fannie Mae (formally known as Federal National Mortgage Association) and Freddie Mac (formally known as Federal Home Loan Mortgage Corporation). Fannie Mae is a government-sponsored corporation the common stock of which is owned entirely by private stockholders. Fannie Mae purchases conventional (*i.e.*, not insured or guaranteed by any government agency) residential mortgages from a list of approved seller/servicers which include state and federally chartered savings and loan associations, mutual savings banks, commercial banks, and credit unions and mortgage bankers. Pass-through securities issued by Fannie Mae are guaranteed as to timely payment of principal and interest by Fannie Mae, but are not backed by the full faith and credit of the U.S. government. Freddie Mac was created by Congress in 1970 for the purpose of increasing the availability of mortgage credit for residential housing. It is a government-sponsored corporation that issues Freddie Mac Guaranteed Mortgage Pass-Through Certificates (also known as “PCs”), which are pass-through securities, each representing an undivided interest in a pool of residential mortgages. Freddie Mac guarantees the timely payment of interest and ultimate collection of principal, but PCs are not backed by the full faith and credit of the U.S. government. A Fixed Income Fund may each also invest in bonds, including unguaranteed mezzanine bonds and subordinate bonds, securitized through Freddie Mac’s “K-Deal” program, which securitizes mortgage loans backed by multi-family apartment properties. Such bonds are also not backed by the full faith and credit of the U.S. government.

Prepayments could cause early retirement of CMOs. CMOs are designed to reduce the risk of prepayment for certain investors by issuing multiple classes of securities, each having different maturities, interest rates and payment schedules, and with the principal and interest on the underlying mortgages allocated among the several classes in various ways. Payment of interest or principal on some classes or series of CMOs may be subject to contingencies or some classes or series may bear some or all of the risk of default on the underlying mortgages. CMOs of different classes or series are generally retired in sequence as the underlying mortgage loans in the mortgage pool are repaid. If enough mortgages are repaid ahead of schedule, the classes or series of a CMO with the earliest maturities generally will be retired prior to their maturities. Thus, the early retirement of particular classes or series of a CMO would have the same effect as the prepayment of mortgages underlying other mortgage-backed securities. Conversely, slower than anticipated prepayments can extend the effective maturities of CMOs, subjecting them to a greater risk of decline in market value in response to rising interest rates than traditional debt securities, and, therefore, potentially increasing their volatility.

Prepayments could result in losses on stripped mortgage-backed securities. Stripped mortgage-backed securities are usually structured with two classes that receive different portions of the interest and principal distributions on a pool of mortgage loans. The yield to maturity on an interest only (“IO”) class of stripped mortgage-backed securities is extremely sensitive not only to changes in prevailing interest rates but also to the rate of principal payments (including prepayments) on the underlying assets. A rapid rate of principal prepayments may have a measurable adverse effect on a Fixed Income Fund’s yield to maturity to the extent it invests in IOs. If the assets underlying the IO experience greater than anticipated prepayments of principal, a Fixed Income Fund may fail to recoup fully its initial investment in these securities. Principal only (“POs”) tend to increase in value if prepayments are greater than anticipated and decline if prepayments are slower than anticipated. The secondary

market for stripped mortgage-backed securities may be more volatile and less liquid than that for other mortgage-backed securities, potentially limiting a Fixed Income Fund's ability to buy or sell those securities at any particular time.

Subprime mortgage loans, which typically are made to less creditworthy borrowers, have a higher risk of default than conventional mortgage loans. Therefore, mortgage-backed securities backed by subprime mortgage loans may suffer significantly greater declines in value due to defaults or the increased risk of default.

The mortgage loans backing the mortgage-backed securities in which a Fixed Income Fund may invest may include re-performing loans ("**RPLs**"), non-performing loans and non-qualified mortgage ("**Non-QM**") loans. RPLs are loans that have previously been delinquent but are current at the time they are securitized. Fannie Mae and Freddie Mac, among others, securitize RPLs. For example, in Fannie Mae's case, the RPLs securitized are single-family, fixed rate re-performing loans that generally were previously placed in a mortgage-backed security trust with certificates guaranteed by Fannie Mae, purchased from the trust by Fannie Mae and held as a distressed asset after four or more months of delinquency, and subsequently became current (*i.e.*, performing) again. Such RPLs may have exited delinquency through efforts at reducing defaults (*e.g.*, loan modification). In selecting RPLs for securitization, Fannie Mae follows certain criteria related to length of time the loan has been performing, the type of loan (single-family, fixed rate), and the status of the loan as first lien, among other things. Fannie Mae may include different loan structures and modification programs in the future. Non-performing loans are mortgage loans where the borrower is in default or is or has been delinquent, for a potentially significant period of time, as to the payment of interest and/or principal. Non-QM loans do not comply with the rules of the Consumer Financial Protection Bureau (the "**CFPB**") relating to qualified mortgages ("**QM**"). To qualify as a QM loan under the CFPB's rules, the loan must meet certain requirements, such as a borrower debt-to-income ratio, being fully-amortizing, and limits on loan fees. Non-QM loans do not comply with at least one of these requirements.

In addition to investing in mortgage-backed securities that are backed by mortgage loans themselves, a Fixed Income Fund may invest in securities that are backed by mortgage servicing rights ("**MSRs**"), including normal MSRs and excess MSRs. Normal MSRs refer to the contractual right to cash flows payable to the mortgage servicer of a pool of mortgage loans for their ongoing administrative duties to the extent such cash flows do not exceed a reasonable amount of consideration for normal servicing activities. Excess MSRs are the rights to any amount of cash flows in excess of normal MSRs.

The risks associated with other asset-backed securities (including in particular the risks of issuer default and of early prepayment) are generally similar to those described above for CMOs. In addition, because asset-backed securities generally do not have the benefit of a security interest in the underlying assets that is comparable to a mortgage (though certain asset-backed securities, such as ETCs and EETCs, may be structured such that there is a security interest in the underlying asset), asset-backed securities may present certain additional risks that are not commonly present with mortgage-backed securities. The ability of an issuer of asset-backed securities to enforce its security interest in the underlying assets may be limited. For example, revolving credit receivables are generally unsecured and the debtors on such receivables are entitled to the protection of a number of state and federal consumer credit laws, many of which give debtors the right to set-off certain amounts owed, thereby reducing the balance due. Automobile receivables generally are secured, but by automobiles, rather than by real property. Similarly, ETCs and EETCs are often secured by different types of equipment (see "--Equipment Trust Certificates (ETCs) and Enhanced Equipment Trust Certificates (EETCs)").

Asset-backed securities may be collateralized by the fees earned by service providers. The values of asset-backed securities may be substantially dependent on the servicing of the underlying asset and are therefore subject to risks associated with the negligence or malfeasance by their servicers and to the credit risk of their servicers. In certain circumstances, the mishandling of related documentation may also affect the rights of the security holders in and to the underlying collateral. The insolvency of entities that generate receivables or that utilize the assets may result in added costs and delays in addition to losses associated with a decline in the value of the underlying assets.

Federal, state and local government officials and representatives as well as certain private parties have proposed actions to assist homeowners who own or occupy property subject to mortgages. Certain of those proposals involve actions that would likely affect the mortgages that underlie or relate to certain mortgage-related securities, including securities or other instruments which a Fixed Income Fund may hold or in which they may invest. Some of those proposals include, among other things, lowering or forgiving principal balances; forbearing, lowering or eliminating interest payments; or utilizing eminent domain powers to seize mortgages, potentially for below market compensation. The prospective or actual implementation of one or more of these proposals may significantly and adversely affect the value and liquidity of securities held by the Fixed Income Fund and could cause the Fixed Income Fund's NAV to decline, potentially significantly. Significant uncertainty remains in the market concerning the resolution of these issues; the range of proposals and the potential implications of any implemented solution are impossible to predict.

A Fixed Income Fund may invest in any level of the capital structure of an issuer of mortgage-backed or asset-backed securities, including the equity or "first loss" tranche. See "—Collateralized Debt Obligations" below.

Consistent with a Fixed Income Fund's investment objective and policies, the Adviser may also cause the Fixed Income Fund to invest in other types of mortgage- and asset-backed securities offered currently or in the future, including certain yet-to-be-developed types of mortgage- and asset-backed securities which may be created as the market evolves.

Mortgage Dollar Rolls. A Fixed Income Fund may enter into mortgage dollar rolls with a bank or a broker-dealer. A mortgage dollar roll is a transaction in which a Fixed Income Fund sells mortgage-related securities for immediate settlement and simultaneously purchases substantially similar securities for forward settlement at a discount. While a Fixed Income Fund begins accruing interest on the newly purchased securities from the purchase or trade date, it is able to invest the proceeds from the sale of its previously owned securities, which will be used to pay for the new securities. The use of mortgage dollar rolls is a speculative technique involving leverage, and can have an economic effect similar to borrowing money for investment purposes.

A "dollar roll" is similar to a reverse repurchase agreement in certain respects. In a "dollar roll" transaction, a Fixed Income Fund sells a mortgage-related security, such as a security issued by Ginnie Mae, to a dealer and simultaneously agrees to repurchase a similar security (but not the same security) in the future at a pre-determined price. A "dollar roll" can be viewed, like a reverse repurchase agreement, as a collateralized borrowing in which a Fixed Income Fund pledges a mortgage-related security to a dealer to obtain cash. However, unlike reverse repurchase agreements, the dealer with which a Fixed Income Fund enters into a dollar roll transaction is not obligated to return the same securities as those originally sold by the Fixed Income Fund, but only securities which are "substantially identical." To be considered "substantially identical," the securities returned to a Fixed Income Fund generally must: (1) be collateralized by the same types of underlying mortgages; (2) be issued by the same agency and be part of the same program; (3) have a similar original stated maturity; (4) have identical net coupon rates; (5) have similar market yields (and therefore price); and (6) satisfy "good delivery" requirements, meaning that the aggregate principal amounts of the securities delivered and received back must be within 2.5% of the initial amount delivered.

A Fixed Income Fund also may effect simultaneous purchase and sale transactions that are known as "sale-buybacks." A sale-buyback is similar to a reverse repurchase agreement, except that in a sale-buyback, the counterparty who purchases the security is entitled to retain any principal or interest payments made on the underlying security pending settlement of a Fixed Income Fund's repurchase of the underlying security.

The use of dollar rolls and similar transactions subjects a Fixed Income Fund to many of the same risks as reverse repurchase agreements, including leverage risk, liquidity risk, counterparty risk, and the risk that the market value of the securities that the Fixed Income Fund is obligated to purchase or repurchase under the agreement may decline below the purchase or repurchase price.

Municipal Bonds. Municipal bonds are investments of any maturity issued by states, public authorities or political subdivisions to raise money for public purposes; they include, for example, general obligations of a state or other government entity supported by its taxing powers to acquire and construct public facilities, or to provide temporary financing in anticipation of the receipt of taxes and other revenue. They also include obligations of states, public authorities or political subdivisions to finance privately owned or operated facilities or public facilities financed solely by enterprise revenues. Changes in law or adverse determinations by the IRS or a state tax authority could cause the income from some of these obligations to become taxable.

Short-term municipal bonds are generally issued by state and local governments and public authorities as interim financing in anticipation of tax collections, revenue receipts or bond sales to finance such public purposes.

Certain types of private activity bonds may be issued by public authorities to finance projects such as privately operated housing facilities; certain local facilities for supplying water, gas or electricity; sewage or solid waste disposal facilities; student loans; or public or private institutions for the construction of educational, hospital, housing and other facilities. Such obligations are included within the term municipal bonds if the interest paid thereon is, in the opinion of bond counsel, exempt from federal income tax and state personal income tax (such interest may, however, be subject to federal alternative minimum tax). Other types of private activity bonds, the proceeds of which are used for the construction, repair or improvement of, or to obtain equipment for, privately operated industrial or commercial facilities, may also constitute municipal bonds, although current federal tax laws place substantial limitations on the size of such issues.

The Fixed Income Funds do not expect to qualify to pass through to shareholders the tax-exempt character of interest on municipal bonds. The Fixed Income Funds may also invest in certain types of municipal bonds that are not tax-exempt. See “—Tax Credit Bonds” below.

Participation interests. A Fixed Income Fund may invest in municipal bonds either by purchasing them directly or by purchasing certificates of accrual or similar instruments evidencing direct ownership of interest payments or principal payments, or both, on municipal bonds, provided that, in the opinion of counsel, any discount accruing on a certificate or instrument that is purchased at a yield not greater than the coupon rate of interest on the related municipal bonds will be exempt from federal income tax to the same extent as interest on the municipal bonds. A Fixed Income Fund may also invest in municipal bonds by purchasing from banks participation interests in all or part of specific holdings of municipal bonds. These participations may be backed in whole or in part by an irrevocable letter of credit or guarantee of the selling bank. The selling bank may receive a fee from the Fixed Income Fund in connection with the arrangement.

Stand-by commitments. If a Fixed Income Fund purchases municipal bonds, it has the authority to acquire stand-by commitments from banks and broker-dealers with respect to those municipal bonds. A stand-by commitment may be considered a security independent of the municipal bond to which it relates. The amount payable by a bank or dealer during the time a stand-by commitment is exercisable, absent unusual circumstances, would be substantially the same as the market value of the underlying municipal bond to a third party at any time. It is expected that stand-by commitments generally will be available without the payment of direct or indirect consideration.

Yields. The yields on municipal bonds depend on a variety of factors, including general money market conditions, effective marginal tax rates, the financial condition of the issuer, general conditions of the municipal bond market, the size of a particular offering, the maturity of the obligation and the rating of the issue. The ratings assigned by NRSROs represent their opinions as to the credit quality of the municipal bonds that they undertake to rate. It should be emphasized, however, that ratings are general and are not absolute standards of quality. Consequently, municipal bonds with the same maturity and interest rate but with different ratings may have the same yield. Yield disparities may occur for reasons not directly related to the investment quality of particular issues or the general movement of interest rates and may be due to such factors as changes in the overall demand or supply of various types of municipal bonds or changes in the investment objectives of

investors. Subsequent to purchase by a Fixed Income Fund, an issue of municipal bonds or other investments may cease to be rated or its rating may be reduced below the minimum rating required for purchase by the Fixed Income Fund. Neither event will require the elimination of an investment from the Fixed Income Fund's portfolio, but the Adviser will consider such an event in its determination of whether the Fixed Income Fund should continue to hold an investment in its portfolio.

Moral obligation bonds. A Fixed Income Fund may invest in so-called moral obligation bonds, where repayment is backed by a moral commitment of an entity other than the issuer, if the credit of the issuer itself, without regard to the moral obligation, meets the investment criteria established for investments by the Fixed Income Fund.

Municipal leases. A Fixed Income Fund may acquire participations in lease obligations or installment purchase contract obligations (collectively, "**lease obligations**") of municipal authorities or entities. Lease obligations do not constitute general obligations of the municipality for which the municipality's taxing power is pledged. Certain of these lease obligations contain non-appropriation clauses, which provide that the municipality has no obligation to make lease or installment purchase payments in future years unless money is appropriated for such purpose on a yearly basis. In the case of a non-appropriation lease, the Fixed Income Fund's ability to recover under the lease in the event of non-appropriation or default will be limited solely to the repossession of the leased property, and in any event, foreclosure of that property might prove difficult.

Pre-refunded municipal bonds. A Fixed Income Fund may invest in pre-refunded municipal bonds, which are a type of municipal bond where the issuer, prior to final maturity of the bond, has set aside high-quality debt instruments in a designated escrow account to fund in full the payment of the amount owed at final maturity to a call date on or before the final maturity of principal and remain outstanding in the municipal market. The payment of principal and interest of the pre-refunded municipal bonds held by the Fixed Income Fund is funded from the securities in the designated escrow account, which typically holds U.S. Treasury securities or other obligations of the U.S. government, including its agencies and instrumentalities ("**Agency Securities**"). Pre-refunded municipal bonds usually will bear an AAA rating (if a re-rating has been requested and paid for) because they typically are backed by the U.S. Treasury or Agency Securities. As the payment of principal and interest is generated from securities held in a designated escrow account, the pledge of the municipality has been fulfilled and the original pledge of revenue by the municipality is no longer in place. The escrow account securities pledged to pay the principal and interest of the pre-refunded municipal bonds held by the Fixed Income Fund nonetheless still subject the Fixed Income Fund to interest rate risk and market risk. In addition, while a secondary market exists for pre-refunded municipal bonds, if the Fixed Income Fund sells pre-refunded municipal bonds prior to maturity, the price received may be more or less than the original cost, depending on market conditions at the time of sale. The interest on pre-refunded bonds issued on or before December 31, 2017 is exempt from federal income tax; the interest on such bonds issued after December 31, 2017 is not exempt from federal income tax.

Revenue Bonds. A Fixed Income Fund may invest in revenue bonds, which are a type of municipal bond payable only from the revenues derived from a particular facility, a class of facilities or, in some cases, from the proceeds of a special excise tax or other specific revenue source. Revenue bonds have been issued to fund a wide variety of capital projects including: electric, gas, water, and sewer systems; highways, bridges and tunnels; port and airport facilities; colleges and universities; hospitals; and other infrastructure assets or projects. Although some of these obligations may be unsecured, municipal bonds may provide security in the form of a debt service reserve fund the assets of which may be used to make principal and interest payments on the issuer's obligations. In addition to a debt service reserve fund, some authorities provide further security in the form of a state's ability (without obligation) to make up deficiencies in the debt reserve fund.

Because revenue bonds are typically payable only from revenue generated by the facility, class of facilities, facility operator, or special excise tax proceeds for payment of interest and principal, rather than the credit of the

state or local government authority issuing the bonds, revenue bonds may be subject to greater credit risk than general obligations because of the relatively limited source of revenue. Industry-specific conditions may also affect the investment quality and value of revenue bonds.

Tax Credit Bonds. If a Fixed Income Fund holds, directly or indirectly, one or more “tax credit bonds” issued on or before December 31, 2017 on one or more applicable dates during a taxable year, it is possible that the Fixed Income Fund will elect to permit their shareholders to claim a tax credit on their income tax returns equal to each shareholder’s proportionate share of tax credits from the applicable bonds that otherwise would be allowed to the Fixed Income Fund. In such a case, a shareholder will be deemed to receive a distribution of money with respect to its Fixed Income Fund shares equal to the shareholder’s proportionate share of the amount of such credits and be allowed a credit against the shareholder’s U.S. federal income tax liability equal to the amount of such deemed distribution, subject to certain limitations imposed by the Code on the credits involved. Even if the Fixed Income Fund is eligible to pass through such tax credits to shareholders, the Fixed Income Fund may choose not to do so.

Additional risks. Securities in which a Fixed Income Fund may invest, including municipal bonds, are subject to the provisions of bankruptcy, insolvency and other laws affecting the rights and remedies of creditors, such as the federal Bankruptcy Code (including special provisions related to municipalities and other public entities), and laws, if any, that may be enacted by Congress or state legislatures extending the time for payment of principal or interest, or both, or imposing other constraints upon enforcement of such obligations. There is also the possibility that, as a result of litigation or other conditions, such as the recent bankruptcy-type proceedings by the Commonwealth of Puerto Rico, the power, ability or willingness of issuers to meet their obligations for the payment of interest and principal on their municipal bonds may be materially affected or their obligations may be found to be invalid or unenforceable. Such litigation or conditions may from time to time have the effect of introducing uncertainties in the market for municipal bonds or certain segments thereof, or of materially affecting the credit risk with respect to particular bonds. Adverse economic, business, legal or political developments might affect all or a substantial portion of a Fixed Income Fund’s municipal bonds in the same manner.

From time to time, proposals have been introduced before Congress for the purpose of restricting or eliminating the federal income tax exemption for interest on debt obligations issued by states and their political subdivisions. Federal tax laws limit the types and amounts of tax-exempt bonds issuable for certain purposes, especially industrial development bonds and private activity bonds. Such limits may affect the future supply and yields of these types of municipal bonds. Further proposals limiting the issuance of municipal bonds may well be introduced in the future.

Options. A Fixed Income Fund may purchase and write (sell) call and put options, including options listed on U.S. or foreign securities exchanges or written in OTC transactions (“**OTC Options**”).

Exchange-listed options are issued by the Options Clearing Corporation (“**OCC**”) (in the U.S.) or another clearing corporation or exchange which assures that all transactions in such options are properly executed. OTC Options are purchased from or sold (written) to dealers or financial institutions which have entered into direct agreements with the Fixed Income Fund. With OTC Options, such variables as expiration date, exercise price and premium will be agreed upon between the Fixed Income Fund and the transacting dealer, without the intermediation of a third party such as the OCC. In the event the counterparty to such a derivative instrument becomes insolvent, a Fixed Income Fund may lose all or substantially all of its investment in the derivative instrument, as well as the benefits derived therefrom. See “Counterparty Risk” in this SAI. It is the position of the SEC that OTC Options are generally illiquid.

Purchasing Call and Put Options. A Fixed Income Fund may purchase a call option in order to offset a previously written call option (see “Call Writing” below), or to protect against an increase in price of a security it anticipates purchasing. The purchase of the call option to effect a closing transaction on a call written OTC may be a listed or an OTC Option. In either case, the call purchased is likely to be on the same securities and have the same terms as the written option. If purchased OTC, the option would generally be acquired from the dealer or financial institution which purchased the call written by the Fixed Income Fund.

Each Fixed Income Fund may purchase put options on securities which it holds in its portfolio to protect itself against a decline in the value of the security and to close out written put option positions. If the value of the underlying security were to fall below the exercise price of the put purchased in an amount greater than the premium paid for the option, the Fixed Income Fund would incur no additional loss. In addition, each Fixed Income Fund may sell a put option which it has previously purchased prior to the sale of the securities underlying such option. Such a sale would result in a net gain or loss depending upon whether the amount received on the sale is more or less than the premium and other transaction costs paid on the put option which is sold. Such gain or loss could be offset in whole or in part by a change in the market value of the underlying security. If a put option purchased by a Fixed Income Fund expired without being sold or exercised, the premium would be lost.

Call Writing. Each Fixed Income Fund is permitted to write covered and uncovered call options on securities. Generally, a call option is covered if a Fixed Income Fund owns, or has the right to acquire, without additional cash consideration (or for additional cash consideration held for the Fund by its custodian in a segregated account) the underlying security subject to the option, or otherwise segregates sufficient cash or U.S. government securities or other liquid securities to cover the outstanding position. A call option is also covered if a Fixed Income Fund holds a call on the same security as the underlying security of the written option, where the exercise price of the call used for coverage is equal to or less than the exercise price of the call written.

Each Fixed Income Fund is also permitted to write (i.e., sell) uncovered call options on securities or instruments in which it may invest but that are not currently held by the Fund. For example, a Fund may write uncovered call options to realize income without committing capital to the ownership of the underlying securities or instruments. The writing of uncovered call options, at least theoretically, presents the potential for an unlimited loss, since it assumes the risk of a theoretically unlimited increase in the market price of the security underlying the option above the exercise price of the option. When an uncovered call is exercised, a Fund must purchase the underlying security to meet its call obligations and the necessary securities may be unavailable for purchase. In addition, the purchase of securities to satisfy the exercise of a call option can cause the price of the underlying securities to rise further, sometimes by a significant amount, thereby exacerbating the loss.

The writer of an option receives from the purchaser, in return for a call it has written, a premium (*i.e.*, the price of the option). Receipt of these premiums may better enable a Fixed Income Fund to earn a higher level of current income than it would earn from holding the underlying securities alone. Moreover, the premium received will offset a portion of the potential loss incurred by a Fixed Income Fund if the securities underlying the option are ultimately sold by the Fixed Income Fund at a loss. Furthermore, a premium received on a call written on a foreign currency will ameliorate any potential loss of value on the portfolio security due to a decline in the value of the currency.

However, during the option period, the covered call writer has, in return for the premium on the option, given up the opportunity for capital appreciation above the exercise price should the market price of the underlying security increase, but has retained the risk of loss should the price of the underlying security decline. The premium received will fluctuate with varying economic market conditions. If the market value of the portfolio securities upon which call options have been written increases, a Fixed Income Fund may receive a lower total return from the portion of its portfolio upon which calls have been written than it would have had such calls not been written.

With respect to listed options and certain OTC Options, during the option period, a Fixed Income Fund may be required, at any time, to deliver the underlying security against payment of the exercise price on any calls it has written (exercise of certain listed and OTC Options may be limited to specific expiration dates). This obligation is terminated upon the expiration of the option period or at such earlier time when the writer effects a closing purchase transaction. A closing purchase transaction is accomplished by purchasing an option of the same series as the option previously written. However, once a Fixed Income Fund has been assigned an exercise notice, the Fixed Income Fund will be unable to effect a closing purchase transaction.

Closing purchase transactions are ordinarily effected to realize a profit or loss on an outstanding call option, to prevent an underlying security from being called, to permit the sale of an underlying security or to enable a Fixed Income Fund to write another call option on the underlying security with either a different exercise price or expiration date or both. A Fixed Income Fund may realize a net gain or loss from a closing purchase transaction depending upon whether the amount of the premium received on the call option is more or less than the cost of effecting the closing purchase transaction. Any loss incurred in a closing purchase transaction may be wholly or partially offset by unrealized appreciation in the market value of the underlying security. Conversely, a gain resulting from a closing purchase transaction could be offset in whole or in part or exceeded by a decline in the market value of the underlying security.

If a call option expires unexercised, a Fixed Income Fund realizes a gain in the amount of the premium on the option less the commission paid. Such a gain, however, may be offset by depreciation in the market value of the underlying security during the option period. If a call option is exercised, a Fixed Income Fund realizes a gain or loss from the sale of the underlying security equal to the difference between the purchase price of the underlying security and the proceeds of the sale of the security plus the premium received on the option less the commission paid.

Put Writing. Each Fixed Income Fund is permitted to write covered and uncovered put options on securities. As a writer of a covered put option, a Fixed Income Fund incurs an obligation to buy the security underlying the option from the purchaser of the put at the option's exercise price at any time during the option period at the purchaser's election (certain listed and OTC put options written by a Fixed Income Fund will be exercisable by the purchaser only on a specific date). A put is covered if, at all times during the option period, a Fund maintains, in a segregated account, cash or other liquid assets in an amount equal to at least the exercise price of the option. Similarly, a short put position could be covered by a Fund by its purchase of a put option on the same security as the underlying security of the written option, where the exercise price of the purchased option is equal to or more than the exercise price of the put written or less than the exercise price of the put written if the marked to market difference is maintained by the Fund in cash or other liquid assets which a Fund holds in a segregated account.

Each Fixed Income Fund is also permitted to write (i.e., sell) uncovered put options on securities or instruments in which it may invest but with respect to which the Fund does not currently have a corresponding short position or has not deposited as collateral cash equal to the exercise value of the put option with the broker-dealer through which it made the uncovered put option. For example, a Fund may write uncovered put options to receive premium income and to acquire such securities or instruments at a net cost below the current market value. A Fund has the obligation to buy the securities or instruments at an agreed upon price if the price of the securities or instruments decreases below the exercise price. If the price of the securities or instruments increases during the option period, the option will expire worthless and the Fund will retain the premium and will not have to purchase the securities or instruments at the exercise price.

In writing puts, a Fixed Income Fund assumes the risk of loss should the market value of the underlying security decline below the exercise price of the option (any loss being decreased by the receipt of the premium on the option written). In the case of listed options, during the option period, a Fixed Income Fund may be required, at any time, to make payment of the exercise price against delivery of the underlying security. The operation of and limitations on covered put options in other respects are substantially identical to those of call options.

Options on Foreign Currencies. Each Fixed Income Fund may purchase and write options on foreign currencies for purposes similar to those involved with investing in foreign currency forward contracts. For example, in order to protect against declines in the dollar value of portfolio securities which are denominated in a foreign currency, a Fixed Income Fund may purchase put options on an amount of such foreign currency equivalent to the current value of the portfolio securities involved. As a result, a Fixed Income Fund would be enabled to sell the foreign currency for a fixed amount of U.S. dollars, thereby locking in the dollar value of the portfolio securities (less the amount of the premiums paid for the options). Conversely, a Fixed Income Fund may purchase call options on foreign currencies in which securities it anticipates purchasing are denominated to secure a set U.S. dollar price

for such securities and protect against a decline in the value of the U.S. dollar against such foreign currency. Each Fixed Income Fund may also purchase call and put options to close out written option positions. As with securities, these options may be covered.

Each Fixed Income Fund may also write call options on foreign currency to protect against potential declines in its portfolio securities which are denominated in foreign currencies. If the U.S. dollar value of the portfolio securities falls as a result of a decline in the exchange rate between the foreign currency in which it is denominated and the U.S. dollar, then a loss to the Fixed Income Fund occasioned by such value decline would be ameliorated by receipt of the premium on the option sold. At the same time, however, a Fixed Income Fund gives up the benefit of any rise in value of the relevant portfolio securities above the exercise price of the option and, in fact, only receives a benefit from the writing of the option to the extent that the value of the portfolio securities falls below the price of the premium received. Each Fixed Income Fund may also write options to close out long call option positions. A put option on a foreign currency would be written by a Fixed Income Fund for the same reason it would purchase a call option, namely, to hedge against an increase in the U.S. dollar value of a foreign security which the Fixed Income Fund anticipates purchasing. Here, the receipt of the premium would offset, to the extent of the size of the premium, any increased cost to a Fixed Income Fund resulting from an increase in the U.S. dollar value of the foreign security. However, a Fixed Income Fund could not benefit from any decline in the cost of the foreign security which is greater than the price of the premium received. Each Fixed Income Fund may also write options to close out long put and call option positions.

A Fixed Income Fund's ability to establish and close out positions on foreign currency options is subject to the maintenance of a liquid market for such options. There can be no assurance that a liquid market will exist for a particular option at any specific time. In addition, options on foreign currencies are affected by all of those factors which influence foreign exchange rates and investments generally.

The value of a foreign currency option depends upon the value of the underlying currency relative to the U.S. dollar. As a result, the price of the option position may vary with changes in the value of either or both currencies and have no relationship to the investment merits of a foreign security, including foreign securities held in a hedged investment portfolio. Because foreign currency transactions occurring in the interbank market involve substantially larger amounts than those that may be involved in the use of foreign currency options, investors may be disadvantaged by having to deal in an odd lot market (generally consisting of transactions of less than \$1 million) for the underlying foreign currencies at prices that are less favorable than for round lots.

Foreign currency transactions, like currency exchange rates, can be affected unpredictably by intervention (or the failure to intervene) by U.S. or foreign governments or central banks, or by currency controls or political developments. Such events may prevent or restrict a Fixed Income Fund's ability to enter into foreign currency transactions, force the Fixed Income Fund to exit a foreign currency transaction at a disadvantageous time or price or result in penalties for the Fixed Income Fund, any of which may result in a loss to the Fixed Income Fund. In addition, the use of cross-hedging transactions may involve special risks, and may leave a Fixed Income Fund in a less advantageous position than if such a hedge had not been established. Because foreign currency forward contracts are privately negotiated transactions, there can be no assurance that a Fixed Income Fund will have flexibility to roll-over a foreign currency forward contract upon its expiration if it desires to do so. Additionally, entering into foreign currency forward contracts exposes the Fund to counterparty risk, including the risk that the other party to the contract will become insolvent, fail to perform its obligations or otherwise default under the forward contract.

Options on Futures Contracts. Each Fixed Income Fund may also purchase and write call and put options on futures contracts which are traded on an exchange and enter into closing transactions with respect to such options to terminate an existing position. An option on a futures contract gives the purchaser the right (in return for the premium paid) to assume a position in a futures contract (a long position if the option is a call and a short position if the option is a put) at a specified exercise price during the term of or at the expiration of the option.

The Fixed Income Funds will purchase and write options on futures contracts for identical purposes to those set forth above for the purchase of a futures contract (purchase of a call option or sale of a put option) and the sale of a futures contract (purchase of a put option or sale of a call option), or to close out a long or short position in futures contracts. If, for example, a Fixed Income Fund wished to protect against an increase in interest rates and the resulting negative impact on the value of a portion of its fixed-income portfolio, it might write a call option on an interest rate futures contract, the underlying security of which correlates with the portion of the portfolio the Fixed Income Fund seeks to hedge. Any premiums received in the writing of options on futures contracts may, of course, provide a further hedge against losses resulting from price declines in portions of a Fixed Income Fund's portfolio. The writing of an option involves the risk of losing the entire investment or substantially more than the entire investment, thereby causing significant losses to a Fixed Income Fund in a relatively short period of time. The ability to trade in or exercise options may be restricted, including if trading in the underlying futures contract becomes restricted.

Pass-Through Notes. A Fixed Income Fund may invest in pass-through notes, which are a type of pass-through obligation of the operator of a marketplace lending platform. The operator of a marketplace lending platform may purchase loan(s) from a funding bank at par using the funds of multiple lenders on deposit in a segregated deposit account held by the operator, and then issue to each such lender at par a pass-through note of the operator (or an affiliate of the operator) representing the right to receive the lender's proportionate share of all principal and interest payments received by the operator from the borrower on the loan funded by such lender (net of the platform servicing fees). Pass-through notes are not direct obligations of the borrowers under the underlying marketplace loans originated by such platforms. As such, holders of certain pass-through notes are exposed to the credit risk of the operator. An operator that becomes subject to bankruptcy proceedings may be unable to make full and timely payments on its pass-through notes even if the borrowers of the underlying marketplace loans timely make all payments due from them. In addition, pass-through notes are non-recourse obligations (except to the extent that the operator actually receives payments from the borrower on the loan). Accordingly, lenders assume all of the borrower credit risk on the loans they fund and are not entitled to recover any deficiency of principal or interest from the operator if the borrower defaults on its payments.

There may be a delay between the time a Fixed Income Fund commits to purchase a pass-through note and the issuance of such note and, during such delay, the funds committed to such an investment will not be available for investment in any other instruments. Because the funds committed to an investment in pass-through notes do not earn interest until the issuance of the note, the delay in issuance will have the effect of reducing the effective rate of return on the investment.

Perpetual Bonds. Perpetual bonds offer a fixed return with no maturity date. Because they never mature, perpetual bonds can be more volatile than other types of bonds that have a maturity date and may have heightened sensitivity to changes in interest rates. An issuer of perpetual bonds is responsible for coupon payments in perpetuity but does not have to redeem the securities. Perpetual bonds are often callable after a set period of time, typically between 5 and 10 years. It is possible that one or more perpetual bonds in which a Fixed Income Fund invests will be characterized as equity rather than debt for U.S. federal income tax purposes. Where such perpetual bonds are issued by non-U.S. issuers, they may be treated in turn as equity securities of a "passive foreign investment company." See "Distributions and Taxes" below for additional information on the tax considerations relating to a Fixed Income Fund's equity investments in passive foreign investment companies.

Private Investment in Public Companies ("PIPEs"). A Fixed Income Fund may invest in PIPE transactions. In a typical PIPE transaction, a Fixed Income Fund will acquire stock of a company (such as convertible notes or convertible preferred stock) that is convertible into common stock through a private placement pursuant to Regulation D. The issuer's common stock is usually publicly traded on a U.S. securities exchange or in the OTC markets, but the securities that are acquired in the PIPE transaction are not registered and will be subject to restrictions on their resale. Due to the potentially illiquid nature of such securities, the purchase price in a PIPE transaction will typically be fixed at a discount to the prevailing market price of the issuer's common stock at the time of the transaction. As part of a PIPE transaction, the issuer will generally be contractually obligated to seek

to register the securities under the U.S. securities laws within an agreed upon period of time after the PIPE transaction. However, the Fixed Income Fund may not be able to sell its shares until that registration process is completed. PIPE transactions are subject to the risk that the issuer may be unable to register the securities for public resale in a timely manner, or at all, in which case the securities could be sold only in a privately negotiated transaction and, potentially, at a price less than that paid by the Fixed Income Fund. Disposing of such securities may involve negotiation and legal expenses. Even if such securities are registered for public sale, the resulting market for the securities may be thin or illiquid, which could make it difficult for a Fixed Income Fund to dispose of such securities at an acceptable price.

Private Investment Vehicles. A Fixed Income Fund may also invest in private investment funds, pools, vehicles, or other structures such as, without limitation, hedge funds, private equity funds or other pooled investment vehicles, which may take the form of corporations, partnerships, trusts, limited partnerships, limited liability companies, or any other form of business organization (collectively, “**private funds**”), including those sponsored or advised by the Adviser or its related parties. Private funds may utilize leverage without limit and, to the extent a Fixed Income Fund invests in private funds that utilize leverage, the Fixed Income Fund will indirectly be exposed to the risks associated with that leverage and the values of its shares may be more volatile as a result. If a private fund in which a Fixed Income Fund invests is not publicly offered or there is no public market for its shares, the Fixed Income Fund will typically be prohibited by the terms of its investment from selling its shares in the private fund, or may not be able to find a buyer for those shares at an acceptable price. Securities issued by private funds are generally issued in private placements and are restricted securities. An investment in a private fund may be highly volatile and difficult to value. A Fixed Income Fund would bear its *pro rata* share of the expenses of any private fund in which it invests. See “—Private Placement and Restricted Securities” below.

An investment in private funds sponsored or advised by the Adviser or its related parties presents certain conflicts of interest. Private funds may pay the Adviser (or its related parties) different levels of fees, each based on the amount of assets invested in them. Accordingly, the Adviser or its related parties will earn fees if the Adviser invests a Fixed Income Fund’s assets in private funds that pay fees to the Adviser or its related parties, and will earn more in payments if the Fixed Income Fund’s assets are allocated to those private funds paying fees at the highest rates. This provides the Adviser an incentive to allocate a Fixed Income Fund’s assets into those private funds that pay the highest rate of fees to the Adviser and its related parties; however, the Adviser has a duty to disregard that incentive and allocate a Fixed Income Fund’s assets based on the best interest of the Fixed Income Fund.

Private Mortgage Pass-Through Securities. Private mortgage pass-through securities are structured similarly to the Ginnie Mae, Fannie Mae and Freddie Mac mortgage pass-through securities but are issued by domestic and foreign private issuers such as originators of and investors in mortgage loans, including savings and loan associations, mortgage banks, commercial banks, investment banks and special purpose subsidiaries of the foregoing. These securities usually are backed by a pool of conventional fixed rate or adjustable rate mortgage loans. Since private mortgage pass-through securities typically are not guaranteed by an entity having the credit status of Ginnie Mae, Fannie Mae and Freddie Mac, such securities generally are structured with one or more types of credit enhancement.

Mortgage Assets often consist of a pool of assets representing the obligations of a number of different parties. There are usually fewer properties in a pool of assets backing commercial mortgage-backed securities than in a pool of assets backing residential mortgage-backed securities hence they may be more sensitive to the performance of fewer Mortgage Assets. To lessen the effect of failures by obligors on underlying assets to make payments, those securities may contain elements of credit support, which fall into two categories: (i) liquidity protection and (ii) protection against losses resulting from ultimate default by an obligor on the underlying assets. Liquidity protection refers to the provision of advances, generally by the entity administering the pool of assets, to ensure that the receipt of payments on the underlying pool occurs in a timely fashion. Protection against losses resulting from default ensures ultimate payment of the obligations on at least a portion of the assets in the pool. This protection may be provided through guarantees, insurance policies or letters of credit obtained by the issuer

or sponsor from third parties, through various means of structuring the transaction or through a combination of such approaches. The degree of credit support provided for each issue is generally based on historical information respecting the level of credit risk associated with the underlying assets. Delinquencies or losses in excess of those anticipated could adversely affect the return on an investment in a security.

Redeemable Securities. Certain securities held by a Fixed Income Fund may permit the issuer at its option to call or redeem its securities. If an issuer were to redeem securities held by a Fixed Income Fund during a time of declining interest rates, Fixed Income Fund may not be able to reinvest the proceeds in securities providing the same investment return as the securities redeemed.

Reverse Repurchase Agreements. A Fixed Income Fund may invest in reverse repurchase agreements. Reverse repurchase agreements involve sales by a Fixed Income Fund of portfolio securities concurrently with an agreement by the Fixed Income Fund to repurchase the same securities at a later date at a fixed price. Reverse repurchase agreements are speculative techniques involving leverage. Reverse repurchase agreements involve the risk that the market value of the securities the Fixed Income Fund are obligated to repurchase under the agreement may decline below the repurchase price. Reverse repurchase agreements involve the risk that the buyer of the securities sold might be unable to deliver them when the Fixed Income Fund seeks to repurchase the securities. If the buyer files for bankruptcy or becomes insolvent, the Fixed Income Fund may be delayed or prevented from recovering the security that it sold.

Rule 144A/ Regulation S Securities. A Fixed Income Fund may invest in securities that are purchased in private placements and, accordingly, are subject to restrictions on resale as a matter of contract or under federal securities laws. Because there may be relatively few potential purchasers for such investments, especially under adverse market or economic conditions or in the event of adverse changes in the financial condition of the issuer, a Fixed income Fund could find it more difficult to sell such securities when the Adviser believes it advisable to do so or may be able to sell such securities only at prices lower than if such securities were more widely held. At times, it may also be more difficult to determine the fair value of such securities for purposes of computing a Fixed Income Fund's NAV.

While such private placements may offer attractive opportunities for investment not otherwise available on the open market, the securities so purchased are often restricted securities, *i.e.*, securities which cannot be sold to the public without registration under the Securities Act or the availability of an exemption from registration (such as Rules 144, 144A or Regulation S), or which are not readily marketable because they are subject to other legal or contractual delays in or restrictions on resale. There may also be limited public information available regarding investments in private funds, which will make such investment particularly dependent on the analytical abilities of a Fixed Income Fund's portfolio managers.

The absence of a trading market can make it difficult to ascertain a market value for illiquid investments. Disposing of illiquid investments may involve time-consuming negotiation and legal expenses, and it may be difficult or impossible for a Fixed Income Fund to sell them promptly at an acceptable price. A Fixed Income Fund may have to bear the extra expense of registering such securities for resale and the risk of substantial delay in effecting such registration. In addition, market quotations are less readily available. The judgment of the Adviser may at times play a greater role in valuing these securities than in the case of publicly traded securities.

Generally speaking, restricted securities may be sold only to qualified institutional buyers, or in a privately negotiated transaction to a limited number of purchasers, or in limited quantities after they have been held for a specified period of time and other conditions are met pursuant to an exemption from registration, or in a public offering for which a registration statement is in effect under the Securities Act. A Fixed Income Fund may be deemed to be an underwriter for purposes of the Securities Act when selling restricted securities to the public, and in such event the Fixed Income Fund may be liable to purchasers of such securities if the registration statement prepared by the issuer, or the prospectus forming a part of it, is materially inaccurate or misleading.

Short Sales and Short Positions. Short sales are transactions in which a Fixed Income Fund sells an instrument it does not own, in anticipation of a decline in the market value of that instrument. To complete such a transaction, the Fixed Income Fund must borrow the instrument to make delivery to the buyer. The Fixed Income Fund then is obligated to replace the instrument borrowed by purchasing it at the market price at or prior to the time of replacement. The price at such time may be more or less than the price at which the instrument was sold by the Fixed Income Fund. Until the instrument is replaced, the Fixed Income Fund is required to repay the lender any dividends or interest that accrues during the period of the loan. The Fixed Income Fund may also enter into a derivative transaction in order to establish a short position with respect to a reference asset. To borrow the instrument or establish the position, the Fixed Income Fund also may be required to pay a premium, which would increase the cost of the instrument sold or position established. The net proceeds of the short position will be retained by the broker (or by the Fixed Income Fund's custodian in a special custody account), to the extent necessary to meet margin requirements, until the short position is closed out. The Fixed Income Fund also will incur transaction costs in effecting short positions.

A Fixed Income Fund will incur a loss as a result of the short position if the price of the instrument or the value of the reference asset increases between the date of the short sale or short position and the date on which the Fixed Income Fund replaces the borrowed instrument or otherwise closes out the transaction. A Fixed Income Fund will generally realize a gain if the instrument or the value of the reference asset declines in price between those dates. The amount of any gain will be decreased, and the amount of any loss increased, by the amount of the premium, dividends, interest, or expenses the Fixed Income Fund may be required to pay in connection with a short position. There can be no assurance that the Fixed Income Fund will be able to close out the position at any particular time or at an acceptable price. A Fixed Income Fund's ability to engage in short sales may from time to time be limited or prohibited because of the inability to borrow certain instruments in the market, legal restrictions on short sales, or other reasons. The loss to a Fixed Income Fund from a short position is potentially unlimited.

The SEC has in the past adopted interim rules requiring reporting of all short positions above a certain de minimis threshold and may adopt (pursuant to recent proposals) rules requiring monthly public disclosure in the future. In addition, other non-U.S. jurisdictions where a Fixed Income Fund may trade have adopted reporting requirements. If a Fixed Income Fund's short positions or its strategy become generally known, it could have a significant effect on the Adviser's ability to implement its investment strategy. In particular, it would make it more likely that other investors could cause a short squeeze in the securities held short by a Fixed Income Fund forcing the Fixed Income Fund to cover its positions at a loss. Such reporting requirements may also limit the Adviser's ability to access management and other personnel at certain companies where the Adviser seeks to take a short position. In addition, if other investors engage in copycat behavior by taking positions in the same issuers as a Fixed Income Fund, the cost of borrowing securities to sell short could increase drastically and the availability of such securities to the Fixed Income Fund could decrease drastically. Such events could make a Fixed Income Fund unable to execute its investment strategy. The SEC and regulatory authorities in other jurisdictions may adopt (and in certain cases, have adopted) bans on new or increases in short sales of certain securities, including short positions acquired through swaps or other derivative instruments, in response to market events. Bans on short selling and such short positions may make it impossible for a Fixed Income Fund to execute certain investment strategies and the Fixed Income Fund may be unable to execute its investment strategies as a result.

Sovereign Debt Obligations. A Fixed Income Fund may invest in sovereign debt, including of emerging market countries. Investors should be aware that certain sovereign debt instruments in which the Fixed Income Fund may invest may involve great risk and may be deemed to be the equivalent in terms of credit quality to securities rated below investment grade by Moody's, S&P or Fitch, Inc.

Sovereign debt may be issued by foreign developed and emerging market governments and their respective subdivisions, agencies or instrumentalities, government sponsored enterprises and supranational government entities. Supranational entities include international organizations that are organized or supported by one or more

government entities to promote economic reconstruction or development and by international banking institutions and related governmental agencies. Investment in sovereign debt can involve a high degree of risk. The governmental entity that controls the repayment of sovereign debt may not be able or willing to repay the principal and/or interest when due in accordance with the terms of the debt. A governmental entity's willingness or ability to repay principal and interest due in a timely manner may be affected by, among other factors, its cash flow situation, the extent of its foreign currency reserves or its inability to sufficiently manage fluctuations in relative currency valuations, the availability of sufficient foreign exchange on the date a payment is due, the relative size of the debt service burden to the economy as a whole, the governmental entity's policy toward principal international lenders such as the International Monetary Fund, and the political and social constraints to which a governmental entity may be subject. Governmental entities also may depend on expected disbursements from foreign governments, multilateral agencies and others to reduce principal and interest arrearages on their debt. The commitment on the part of these governments, agencies and others to make such disbursements may be conditioned on a governmental entity's implementation of economic reforms and/or economic performance and the timely service of such debtor's obligations. Failure to implement such reforms, achieve such levels of economic performance or repay principal or interest when due may result in the cancellation of such third parties' commitments to lend funds to the governmental entity, which may further impair such debtor's ability or willingness to service its debts in a timely manner. Consequently, governmental entities may decide to default on their sovereign debt in whole or in part. Holders of sovereign debt (including the Fixed Income Funds) may be requested to participate in the rescheduling of such debt and to extend further loans to governmental entities. There is no bankruptcy proceeding through which holders of sovereign debt (including the Fixed Income Funds) may attempt to collect all or a portion of their investment upon a default, which could result in significant losses to the Fixed Income Funds.

A Fixed Income Fund may invest in Brady Bonds, sovereign debt securities created through the exchange of existing commercial bank loans to sovereign entities for new obligations in connection with debt restructurings under a debt restructuring plan. Brady Bonds may be collateralized or uncollateralized, are issued in various currencies (primarily the U.S. dollar) and are actively traded in the OTC secondary market. Investments in Brady Bonds involve various risks associated with investing in sovereign debt securities and may be subject to restructuring arrangements or to requests for new credit, which may cause the Fixed Income Fund to lose interest or principal on holdings consisting of Brady Bonds.

A Fixed Income Fund's investments in foreign currency denominated debt obligations and hedging activities will likely produce a difference between its book income and its taxable income. This difference may cause a portion of the Fixed Income Fund's income distributions to constitute returns of capital for tax purposes or require the Fixed Income Fund to make distributions exceeding book income to qualify as a RIC for federal tax purposes. See "Distributions and Taxes" below.

Some of the countries in which a Fixed Income Fund may invest have encountered difficulties in servicing their sovereign debt. Some of these countries have withheld payments of interest and/or principal of sovereign debt. These difficulties have also led to agreements to restructure external debt obligations; in particular, commercial bank loans, typically by rescheduling principal payments, reducing interest rates and extending new credits to finance interest payments on existing debt. Unlike most corporate debt restructurings, the fees and expenses of financial and legal advisers to the creditors in connection with a restructuring may be borne by the holders of the sovereign debt securities instead of the sovereign entity itself. Some sovereign debtors have in the past been able to restructure their debt payments without the approval of some or all debt holders or to declare moratoria on payments, and similar occurrences may happen in the future where holders of sovereign debt may be requested to participate in similar rescheduling of such debt.

The ability or willingness of foreign governments to make timely payments on their sovereign debt is likely to be influenced strongly by a country's balance of trade and its access to trade and other international credits. A country whose exports are concentrated in a few commodities could be vulnerable to a decline in the international prices of one or more of such commodities. Increased protectionism on the part of a country's

trading partners could also adversely affect its exports. Such events could extinguish a country's trade account surplus, if any. To the extent that a country receives payment for its exports in currencies other than hard currencies, its ability to make hard currency payments could be affected.

The occurrence of political, social, economic and diplomatic changes in one or more of the countries issuing sovereign debt could adversely affect the Fixed Income Fund's investments. The countries issuing such instruments may be faced with social and political issues and some of them have experienced high rates of inflation and have extensive internal debt. Among other effects, high inflation and internal debt service requirements may adversely affect the cost and availability of future domestic sovereign borrowing to finance governmental programs, and may have other adverse social, political and economic consequences. Political changes or a deterioration of a country's domestic economy or balance of trade may affect the willingness of countries to service their sovereign debt. There can be no assurance that adverse political changes will not cause the Fixed Income Fund to suffer a loss of interest or principal on any of its holdings.

As a result of all of the foregoing, a government obligor may default on its obligations and/or the values of its obligations may decline significantly. If an event of default occurs, the Fixed Income Fund may have limited legal recourse against the issuer and/or guarantor. Remedies must, in some cases, be pursued in the courts of the defaulting party itself, and the ability of the holder of foreign government debt securities to obtain recourse may be subject to the political climate in the relevant country. Bankruptcy, moratorium and other similar laws designed to protect and enforce the rights of creditors may not apply to issuers of sovereign debt obligations in many jurisdictions may be substantially different from those applicable to issuers of private debt obligations, and/or may be ineffective in enforcing a Fixed Income Fund's rights or effecting a recovery on the Fixed Income Fund's investments. In addition, no assurance can be given that the holders of commercial bank debt will not contest payments to the holders of other foreign government debt obligations in the event of default under their commercial bank loan agreements.

Periods of economic uncertainty may result in the volatility of market prices of sovereign debt and in turn, a Fixed Income Fund's NAV, to a greater extent than the volatility inherent in domestic securities. The value of sovereign debt will likely vary inversely with changes in prevailing interest rates, which are subject to considerable variance in the international market.

Special Purpose Acquisition Companies. A Fixed Income Fund may invest in stock, warrants, and other securities of special purpose acquisition companies ("SPACs") or similar special purpose entities that pool funds to seek potential acquisition opportunities. Unless and until an acquisition meeting the SPAC's requirements is completed, a SPAC generally invests its assets (less a portion retained to cover expenses) in U.S. government securities, money market securities and cash; if an acquisition that meets the requirements for the SPAC is not completed within a pre-established period of time, the invested funds are returned to the entity's shareholders. Because SPACs and similar entities have no operating history or ongoing business other than seeking acquisitions, the value of their securities is particularly dependent on the ability of the entity's management to identify and complete a profitable acquisition. Some SPACs may pursue acquisitions only within certain industries or regions, which may increase the volatility of their prices. In addition, these securities, which are typically traded in the OTC market, may be considered illiquid and/or be subject to restrictions on resale. A Fixed Income Fund's affiliates may create a SPAC for purchase by the Fixed Income Fund to assist the Fixed Income Fund in purchasing certain assets not otherwise available to the Fixed Income Fund.

Stapled Securities. A Fixed Income Fund may invest in stapled securities, which are financial instruments comprised of two or more different instruments that are contractually bound to form a single salable unit; they cannot be bought or sold separately. Stapled securities may often include a share in a company and a unit in a trust related to that company. The resulting security is influenced by both parts, and must be treated as one unit at all times, such as when buying or selling a security. The value of stapled securities and the income, if any, derived from them may fall as well as rise. The market for stapled securities may be illiquid at times, even for those securities that are listed on a domestic or foreign exchange.

Stripped Mortgage Securities. Stripped mortgage securities may be issued by Federal Agencies, or by private originators of, or investors in, mortgage loans, including savings and loan associations, mortgage banks, commercial banks, investment banks and special purpose subsidiaries of the foregoing. Stripped mortgage securities issued by Federal Agencies generally will be treated by the Fixed Income Funds as liquid securities under procedures adopted by the Fixed Income Funds and approved by the Fixed Income Funds' Board.

Stripped mortgage securities usually are structured with two classes that receive different proportions of the interest and principal distribution of a pool of mortgage assets. A common type of stripped mortgage security will have one class receiving some of the interest and most of the principal from the mortgage assets, while the other class will receive most of the interest and the remainder of the principal. In the most extreme case, one class will receive all of the interest from the mortgage assets (the interest-only or "**IO**" class), while the other class will receive all of the principal from the mortgage assets (the principal-only or "**PO**" class). PO classes generate income through the accretion of the deep discount at which such securities are purchased, and, while PO classes do not receive periodic payments of interest, they receive monthly payments associated with scheduled amortization and principal prepayment from the mortgage assets underlying the PO class. The yield to maturity (the expected rate of return on a bond if held until the end of its lifetime) on a PO or an IO class security is extremely sensitive to the rate of principal payments (including prepayments) on the related underlying mortgage assets. A slower than expected rate of principal payments may have an adverse effect on a PO class security's yield to maturity. If the underlying mortgage assets experience slower than anticipated principal repayment, the Fixed Income Fund may fail to fully recoup its initial investment in these securities. Conversely, a rapid rate of principal payments may have a material adverse effect on an IO class security's yield to maturity. If the underlying mortgage assets experience greater than anticipated prepayments or principal, the Fixed Income Fund may fail to fully recoup its initial investment in these securities.

A Fixed Income Fund may purchase stripped mortgage securities for income, or for hedging purposes to protect the Fixed Income Fund's portfolio against interest rate fluctuations. For example, since an IO class will tend to increase in value as interest rates rise, it may be utilized to hedge against a decrease in value of other fixed-income securities in a rising interest rate environment.

Structured Investments. A structured investment is a security having a return tied to an underlying index or other security or asset class. Structured investments generally are individually negotiated agreements and may be traded OTC. Structured investments are organized and operated to restructure the investment characteristics of the underlying security. This restructuring involves the deposit with or purchase by an entity, such as a corporation or trust, or specified instruments (such as commercial bank loans) and the issuance by that entity or one or more classes of securities ("**structured securities**") backed by, or representing interests in, the underlying instruments. The cash flow on the underlying instruments may be apportioned among the newly issued structured securities to create securities with different investment characteristics, such as varying maturities, payment priorities and interest rate provisions, and the extent of such payments made with respect to structured securities is dependent on the extent of the cash flow on the underlying instruments. Because structured securities typically involve no credit enhancement, their credit risk generally will be equivalent to that of the underlying instruments. Investments in structured securities are generally of a class of structured securities that is either subordinated or unsubordinated to the right of payment of another class. Subordinated structured securities typically have higher yields and present greater risks than unsubordinated structured securities. Structured securities are typically sold in private placement transactions, and there currently is no active trading market for structured securities.

Swap Agreements & Similar Transactions. A Fixed Income Fund may enter into swap agreements and other types of OTC transactions such as caps, floors and collars with broker-dealers or other financial institutions for hedging or investment purposes. An example of one type of swap involves the exchange by a Fixed Income Fund with another party of their respective commitments to pay or receive cash flows, for example, an exchange of floating rate payments for fixed-rate payments. The purchase of a cap entitles the purchaser, to the extent that a specified index or other underlying financial measure exceeds a predetermined value on a predetermined date or dates, to receive payments on a notional principal amount from the party selling the cap. The purchase of a floor

entitles the purchaser, to the extent that a specified index or other underlying financial measure falls or other underlying measure below a predetermined value on a predetermined date or dates, to receive payments on a notional principal amount from the party selling the floor. A collar combines elements of a cap and a floor.

Swap agreements and similar transactions can be individually negotiated and structured to include exposure to a variety of different types of investments or market factors. Depending on their structures, such transactions may increase or decrease a Fixed Income Fund's exposure to long-or short-term interest rates (in the United States or abroad), foreign currency values, mortgage securities, mortgage rates, corporate borrowing rates, or other factors such as security prices, inflation rates or the volatility of an index or one or more securities. For example, if a Fixed Income Fund enters into a swap agreement only to exchange payments in U.S. dollars for payments in a non-U.S. currency, the swap agreement would tend to decrease the Fixed Income Fund's exposure to U.S. interest rates and increase its exposure to that non-U.S. currency and interest rates. The value of a Fixed Income Fund's swap positions would increase or decrease depending on the changes in value of the underlying rates, currency values, volatility or other indices or measures. Caps and floors have an effect similar to buying or writing options. Depending on how they are used, swap agreements and similar transactions may increase or decrease the overall volatility of a Fixed Income Fund's investments and its share price. A Fixed Income Fund's ability to engage in certain swap or similar transactions may be limited by tax considerations.

Many OTC derivatives are complex and their valuation often requires subjective modeling and judgment, which increases the risk of mispricing or incorrect valuation. The pricing models used may not produce valuations that are consistent with the values a Fixed Income Fund realizes when it closes or sells an OTC derivative. Valuation risk is more pronounced when a Fixed Income Fund enters into OTC derivatives with specialized terms because the market value of those derivatives in some cases is determined in part by reference to similar derivatives with more standardized terms. Incorrect valuations may result in increased cash payment requirements to counterparties, undercollateralization and/or errors in calculation of the Fixed Income Fund's NAV. If a default occurs by the other party to such transaction, a Fixed Income Fund will have contractual remedies pursuant to the agreements related to the transaction, which may be limited by applicable law in the case of a counterparty's insolvency. Also, because swap transactions typically involve a contract between the two parties, such swap investments can be extremely illiquid, as it is uncertain as to whether another counterparty would wish to take assignment of the rights under the swap contract at a price acceptable to a Fixed Income Fund. See "Liquidity Risk" and "Counterparty Risk" in the Prospectus and this SAI for more information.

A Fixed Income Fund may also enter into options on swap agreements ("**swaptions**"). A swaption is a contract that gives a counterparty the right (but not the obligation) to enter into a new swap agreement or to shorten, extend, cancel or otherwise modify an existing swap agreement, at some designated future time on specified terms. A Fixed Income Fund may write (sell) and purchase put and call swaptions to the same extent it may make use of standard options on securities or other instruments. Swaptions are generally subject to the same risks involved in a Fixed Income Fund's use of OTC (non-exchange-traded) options.

Credit Default Swaps. A credit default swap is an agreement between a Fixed Income Fund and a counterparty that enables the Fixed Income Fund to buy or sell protection against a credit event related to a particular issuer. One party, acting as a protection buyer, makes periodic payments, which may be based on, among other things, a fixed or floating rate of interest, to the other party, a protection seller, in exchange for a promise by the protection seller to make a payment to the protection buyer if a negative credit event (such as a delinquent payment or default) occurs with respect to a referenced bond or group of bonds. Credit default swaps may also be structured based on the debt of a basket of issuers, rather than a single issuer, and may be customized with respect to the default event that triggers purchase or other factors (for example, the Nth default within a basket, or defaults by a particular combination of issuers within the basket, may trigger a payment obligation). As a credit protection seller in a credit default swap contract, the Fixed Income Fund would be required to pay the par (or other agreed-upon) value of a referenced debt obligation to the counterparty following certain negative credit events as to a specified third-party debtor, such as default by a U.S. or non-U.S. corporate issuer on its debt obligations. In return for its obligation, the Fixed Income Fund would receive from the counterparty a periodic stream of

payments, which may be based on, among other things, a fixed or floating rate of interest, over the term of the contract provided that no event of default has occurred. If no default occurs, the Fixed Income Fund would keep the stream of payments, and would have no payment obligations to the counterparty. A Fixed Income Fund may sell credit protection in order to earn additional income and/or to take a synthetic long position in the underlying security or basket of securities.

A Fixed Income Fund may enter into credit default swap contracts as protection buyer in order to hedge against the risk of default on the debt of a particular issuer or basket of issuers or attempt to profit from a deterioration or perceived deterioration in the creditworthiness of the particular issuer(s) (also known as buying credit protection). This would involve the risk that the investment may expire worthless and would only generate gain in the event of an actual default by the issuer(s) of the underlying obligation(s) (or, as applicable, a credit downgrade or other indication of financial instability). It would also involve the risk that the seller may fail to satisfy its payment obligations to a Fixed Income Fund. The purchase of credit default swaps involves costs, which will reduce the Fixed Income Fund's return.

Credit default swaps are generally subject to the same risks involved in the Fixed Income Fund's use of swap transactions but also involve a number of special risks. A protection seller may have to pay out amounts following a negative credit event greater than the value of the reference obligation delivered to it by its counterparty and the amount of periodic payments previously received by it from the counterparty. When a Fixed Income Fund acts as a seller of a credit default swap, it is exposed to, among other things, leverage risk because if an event of default occurs the seller must pay the buyer the full notional value of the reference obligation. The value of the credit default swap to each party will change based on changes in the actual or perceived creditworthiness of the underlying issuer.

A protection buyer generally also will lose its investment and recover nothing should no credit event occur and the swap is held to its termination date. If a credit event were to occur, the value of any deliverable obligation received by the seller, coupled with the upfront or periodic payments previously received, may be less than the full notional value it pays to the buyer, resulting in a loss of value to the seller. A Fixed Income Fund may seek to realize gains on its credit default swap positions, or limit losses on its positions, by selling those positions in the secondary market.

There can be no assurance that a liquid market will exist at any given time for any particular credit default swap or for credit default swaps generally. The market for credit default swaps has at times become more volatile as the creditworthiness of certain counterparties has been questioned and/or downgraded. A Fixed Income Fund may exit its obligations under a credit default swap only by terminating the contract and paying applicable breakage fees, or by entering into an offsetting credit default swap position, which may cause the Fixed Income Fund to incur more losses. There can be no assurance that a Fixed Income Fund will be able to exit a credit default swap position effectively when it seeks to do so.

Total and Excess Return Swaps. A Fixed Income Fund may also enter into total and excess return swap agreements, which are contracts in which one party agrees to make periodic payments to another party based on the change in market value of the assets underlying the contract, which may include a specified security or commodity, basket of securities or commodities, or securities or commodities indices during the specified period, in return for periodic payments based on a fixed or variable interest rate or the total return from other underlying assets. Total and excess return swap agreements may be used to obtain exposure to a security, commodity, or market without owning or taking physical custody of such security or commodity or investing directly in such market.

Total and excess return swap agreements are generally subject to the same risks involved in a Fixed Income Fund's use of swap transactions and, in some cases, may effectively add leverage to the Fixed Income Fund's portfolio. Swap agreements also bear the risk that a Fixed Income Fund will not be able to meet its obligation to the counterparty. A Fixed Income Fund may enter into total and excess return swaps on a net basis (*i.e.*, the two payment streams are netted against one another with the Fixed Income Fund receiving or paying, as the case may be, only the net amount of the two payments).

Tender Option Bonds. In a tender option bond transaction (“**TOB**”), a tender option bond trust (“**TOB Trust**”) issues floating rate certificates (“**TOB Floater**”) and residual interest certificates (“**TOB Residual**”) and utilizes the proceeds of such issuance to purchase a fixed-rate municipal bond (“**Fixed Rate Bond**”) that either is owned or identified by a Fixed Income Fund. The TOB Floater is generally issued to investors (typically a money market fund) and the TOB Residual is generally issued to other investors, including, potentially, a Fixed Income Fund, that may have sold or identified the Fixed Rate Bond. The TOB Trust divides the income stream provided by the Fixed Rate Bond to create two securities, the TOB Floater, which is a short-term security, and the TOB Residual, which is a longer-term security. The interest rates payable on the TOB Residual bear an inverse relationship to the interest rate on the TOB Floater. The interest rate on the TOB Floater is reset by a remarketing process typically every 7 to 35 days. After income is paid on the TOB Floater at current rates, the residual income from the Fixed Rate Bond goes to the TOB Residual. Therefore, rising short-term rates result in lower income for the TOB Residual, and vice versa. In the case of a TOB Trust that utilizes the cash received (less transaction expenses) from the issuance of the TOB Floater and TOB Residual to purchase the Fixed Rate Bond from a Fixed Income Fund, the Fixed Income Fund may then invest the cash received in additional securities, generating leverage for the Fixed Income Fund. Other DoubleLine-managed accounts may also contribute municipal bonds to a TOB Trust into which a Fixed Income Fund has contributed Fixed Rate Bonds. If multiple DoubleLine-managed accounts participate in the same TOB Trust, the economic rights and obligations under the TOB Residual will be shared among the funds ratably in proportion to their participation in the TOB Trust.

The TOB Residual may be more volatile and less liquid than other municipal bonds of comparable maturity. In most circumstances the TOB Residual holder bears substantially all of the underlying Fixed Rate Bond’s downside investment risk and also benefits from any appreciation in the value of the underlying Fixed Rate Bond. Investments in a TOB Residual typically will involve greater risk than investments in Fixed Rate Bonds.

A TOB Residual held by a Fixed Income Fund may provide the Fixed Income Fund with the right to: (1) cause the holders of the TOB Floater to tender their notes at par, and (2) cause the sale of the Fixed-Rate Bond held by the TOB Trust, thereby collapsing the TOB Trust. TOB Trusts are generally supported by a liquidity facility provided by a third party bank or other financial institution (the “**Liquidity Provider**”) that provides for the purchase of TOB Floaters that cannot be remarketed. The holders of the TOB Floaters have the right to tender their certificates in exchange for payment of par plus accrued interest on a periodic basis (typically weekly) or on the occurrence of certain mandatory tender events. The tendered TOB Floaters are remarketed by a remarketing agent, which is typically an affiliated entity of the Liquidity Provider. If the TOB Floaters cannot be remarketed, the TOB Floaters are purchased by the TOB Trust either from the proceeds of a loan from the Liquidity Provider or from a liquidation of the Fixed Rate Bond.

The TOB Trust may also be collapsed without the consent of a Fixed Income Fund, as the TOB Residual holder, upon the occurrence of certain “tender option termination events” (or “**TOTES**”) as defined in the TOB Trust agreements. Such termination events typically include the bankruptcy or default of the issuer of the municipal bond, a substantial downgrade in credit quality of the municipal bond (or issuer thereof), or a judgment or ruling that interest on the Fixed Rate Bond is subject to federal income taxation. Upon the occurrence of a termination event, the TOB Trust would generally be liquidated in full with the proceeds typically applied first to any accrued fees owed to the trustee, remarketing agent and liquidity provider, and then to the holders of the TOB Floater up to par plus accrued interest owed on the TOB Floater and a portion of gain share, if any, with the balance paid out to the TOB Residual holder. In the case of a mandatory termination event, after the payment of fees, the TOB Floater holders would be paid before the TOB Residual holders (*i.e.*, a Fixed Income Fund). In contrast, in the case of a TOTE, after payment of fees, the TOB Floater holders and the TOB Residual holders would be paid pro rata in proportion to the respective face values of their certificates.

In December 2013, regulators finalized rules implementing Section 619 (the “**Volcker Rule**”) and Section 941 (the “**Risk Retention Rules**”) of the Dodd-Frank Wall Street Reform and Consumer Protection Act (the “**Dodd-Frank Act**”). Both the Volcker Rule and the Risk Retention Rules apply to tender option bond programs. The Volcker Rule precludes banking entities from (i) sponsoring or acquiring interests in the trusts used to hold a

municipal bond in the creation of TOB Trusts; and (ii) continuing to service or maintain relationships with existing programs involving TOB Trusts to the same extent and in the same capacity as existing programs. The Risk Retention Rules require the sponsor to a TOB Trust (*e.g.*, a Fixed Income Fund) to retain at least five percent of the credit risk of the underlying assets supporting the TOB Trust's municipal bonds. The Risk Retention Rules may adversely affect a Fixed Income Fund's ability to engage in tender option bond trust transactions or increase the costs of such transactions in certain circumstances.

In response to these rules, industry participants explored various structuring alternatives for TOB Trusts and agreed on a new tender option bond structure in which a Fixed Income Fund may hire service providers to assist with establishing, structuring and sponsoring a TOB Trust. Service providers to a TOB Trust, such as administrators, liquidity providers, trustees and remarketing agents act at the direction of, and as agent of, the Fixed Income Fund as the TOB residual holders.

Under the new TOB Trust structure, the Liquidity Provider or remarketing agent will no longer purchase the tendered TOB Floaters, even in the event of failed remarketing. This may increase the likelihood that a TOB Trust will need to be collapsed and liquidated in order to purchase the tendered TOB Floaters. The TOB Trust may draw upon a loan from the Liquidity Provider to purchase the tendered TOB Floaters. Any loans made by the Liquidity Provider will be secured by the purchased TOB Floaters held by the TOB Trust and will be subject to an interest rate agreed with the Liquidity Provider.

Warrants. A Fixed Income Fund may invest in warrants, which are instruments that give the Fixed Income Fund the right to purchase certain securities from an issuer at a specific price (the “**strike price**”) for a limited period of time. The strike price of warrants typically is much lower than the current market price of the underlying securities, yet they are subject to similar price fluctuations. As a result, warrants may be more volatile investments than the underlying securities and may offer greater potential for capital appreciation as well as capital loss. Warrants do not entitle a holder to dividends or voting rights with respect to the underlying securities and do not represent any rights in the assets of the issuing company. Also, the value of the warrant does not necessarily change with the value of the underlying securities and a warrant ceases to have value if it is not exercised prior to the expiration date. These factors can make warrants more speculative than other types of investments.

In addition to warrants on securities, a Fixed Income Fund may purchase put warrants and call warrants whose values vary depending on the change in the value of one or more specified securities indices (“**index warrants**”). Index warrants are generally issued by banks or other financial institutions and give the holder the right, at any time during the term of the warrant, to receive upon exercise of the warrant a cash payment from the issuer based on the value of the underlying index at the time of exercise. In general, if the value of the underlying index rises above the exercise price of the index warrant, the holder of a call warrant will be entitled to receive a cash payment from the issuer upon exercise based on the difference between the value of the index and the exercise price of the warrant; if the value of the underlying index falls, the holder of a put warrant will be entitled to receive a cash payment from the issuer upon exercise based on the difference between the exercise price of the warrant and the value of the index. The holder of a warrant would not be entitled to any payments from the issuer at any time when, in the case of a call warrant, the exercise price is greater than the value of the underlying index, or, in the case of a put warrant, the exercise price is less than the value of the underlying index. If the Fixed Income Fund were not to exercise an index warrant prior to its expiration, then the Fixed Income Fund would lose the amount of the purchase price paid by it for the warrant.

A Fixed Income Fund will normally use index warrants in a manner similar to its use of options on securities indices. The risks of a Fixed Income Fund's use of index warrants are generally similar to those relating to its use of index options. Unlike most index options, however, index warrants are issued in limited amounts and are not obligations of a regulated clearing agency, but are backed only by the credit of the bank or other institution which issues the warrant. Also, index warrants generally have longer terms than index options. Index warrants are not likely to be as liquid as certain index options backed by a recognized clearing agency. In addition, the terms of index warrants may limit a Fixed Income Fund's ability to exercise the warrants at such time, or in such quantities, as the Fixed Income Fund would otherwise wish to do.

When, As and If Issued Securities. A Fixed Income Fund may purchase securities on a “when, as and if issued” basis under which the issuance of the security depends upon the occurrence of a subsequent event, such as approval of a merger, corporate reorganization, leveraged buyout or debt restructuring. The commitment for the purchase of any such security will not be recognized in the portfolio of a Fixed Income Fund until the Adviser determines that issuance of the security is probable. A Fixed Income Fund may purchase securities on such basis without limit. The purchase of securities on a “when, as and if issued” basis may create investment leverage and increase the volatility of the Fixed Income Fund’s NAV. A Fixed Income Fund may also sell securities on a “when, as and if issued” basis provided that the issuance of the security will result automatically from the exchange or conversion of a security owned by the Fixed Income Fund at the time of the sale.

When-Issued and Delayed Delivery Securities and Forward Commitments. When purchasing a security on a when-issued, delayed delivery, or forward commitment basis, a Fixed Income Fund assumes many of the benefits and risks of ownership of the security, including the risk of price and yield fluctuations, but does not take delivery of the security until a date substantially after the date the transaction is entered into. Because the Fixed Income Fund is not required to pay for the security until the delivery date, these transactions may create investment leverage. When a Fixed Income Fund has sold a security on a when-issued, delayed delivery, or forward commitment basis, the Fixed Income Fund does not participate in future gains or losses with respect to the security. Proposed amendments to rules of the Financial Industry Regulatory Authority, Inc. (“FINRA”) would impose mandatory margin requirements for certain types of when-issued, delayed delivery, or forward commitment transactions, with limited exceptions. Such transactions historically have not been required to be collateralized, and, if those rules are implemented, mandatory collateralization could increase the cost of such transactions and impose added operational complexity.

Yankee Dollar Obligations, Eurobonds, Global Bonds. Certain debt securities purchased by a Fixed Income Fund may take the forms of Yankee dollar obligations, Eurobonds or global bonds. Yankee dollar obligations are U.S. dollar-denominated obligations issued in the U.S. capital markets by foreign issuers, such as corporations and banks. A Eurobond is a bond issued in a currency other than the currency of the country or market in which it is issued. Global bonds are bonds that can be offered within multiple markets simultaneously. Unlike Eurobonds, global bonds can be issued in the local currency of the country of issuance.

Zero-Coupon and Payment-in-Kind Bonds. A Fixed Income Fund may invest without limit in so-called zero-coupon bonds (sometimes referred to as discount notes or bonds) and payment-in-kind bonds. Zero-coupon bonds are issued at a significant discount from their principal amount in lieu of paying interest periodically. Payment-in-kind bonds allow the issuer, at its option, to make current interest payments on the bonds either in cash or in additional bonds. Because zero-coupon and payment-in-kind bonds do not pay current interest in cash, their value is subject to greater fluctuation in response to changes in market interest rates than bonds that pay interest currently. Both zero-coupon and payment-in-kind bonds allow an issuer to avoid the need to generate cash to meet current interest payments. Accordingly, such bonds may involve greater credit risks than bonds paying interest currently in cash. The Fixed Income Fund is required to accrue interest income on such investments and to distribute such amounts at least annually to shareholders even though the investments do not make any current interest payments. Thus, it may be necessary at times for the Fixed Income Fund to liquidate other investments in order to satisfy its distribution requirements under the Code.

RISK CONSIDERATIONS

The following risk considerations relate to investment practices undertaken by the Funds. Generally, since shares of a Fund represent an investment in securities with fluctuating market prices, shareholders should understand that the value of their Fund shares will vary as the value of each Fund’s portfolio securities increases or decreases. Therefore, the value of an investment in a Fund could go down as well as up. You can lose money by investing in a Fund. There is no guarantee of successful performance, that a Fund’s objective can be achieved or that an investment in a Fund will achieve a positive return. An investment in a Fund should be considered as a means of diversifying an investment portfolio and is not in itself a

balanced investment program. The risks listed below are in alphabetical order, not in order of importance. The significance of any specific risk to an investment in a Fund will vary over time, depending on the composition of a Fund's portfolio, market conditions, and other factors. You should read all of the risk information presented below carefully, because any one or more of these risks may result in losses to a Fund.

Please see the Funds' Prospectus for more information on the principal risks and investment strategies associated with the Funds. The significance of any specific risk to an investment in a Fund will vary over time, depending on the composition of the Fund's portfolio, market conditions, and other factors. Your investment in a Fund may be subject (in varying degrees) to the following risks discussed below. A Fund may be more susceptible to some of the risks than others. You should read all of the risk information for the Funds presented below carefully, because any one or more of these risks may result in losses to a Fund.

General

Various market risks can affect the price or liquidity of an issuer's securities. Adverse events occurring with respect to an issuer's performance or financial position can depress the value of the issuer's securities. The liquidity in a market for a particular security will affect its value and may be affected by factors relating to the issuer, as well as the depth of the market for that security. Other market risks that can affect value include a market's current attitudes about type of security, market reactions to political or economic events, and tax and regulatory effects (including lack of adequate regulations for a market or particular type of instrument). Market restrictions on trading volume can also affect price and liquidity.

Certain risks exist because of the composition and investment horizon of a particular portfolio of securities. Prices of many securities tend to be more volatile in the short-term and lack of diversification in a portfolio can also increase volatility.

Fixed Income Funds and Equities ETF

Borrowing Risk

The Fixed Income Funds may borrow money (or engage in transactions that are economically similar to borrowing money) to make investments, to satisfy redemptions, or to obtain investment exposure to various markets or investment styles, some of which have the potential to increase the volatility of the NAV of a Fund's shares. The Equities ETF may borrow money (or engage in transactions that are economically similar to borrowing money) to satisfy redemptions; the Equities ETF may not borrow money (or engage in transactions that are economically similar to borrowing money) to make investments or to obtain investment exposure to various markets or investment styles, some of which have the potential to increase the volatility of the NAV of Fund shares. Borrowing causes a Fund to incur interest expenses and potentially other borrowing fees. The costs of borrowing may reduce a Fund's return. Borrowing may cause a Fund to liquidate positions when it may not be advantageous to do so to satisfy its repayment obligations. There can be no assurance that any line of credit will remain available to the Funds generally or that any available credit under any facility will be available to any particular Fund when the Fund seeks to draw on the facility. In accordance with the Order, the Equities ETF may not borrow for investment purposes.

Capital Controls

Capital controls are measures a nation's government can use to regulate capital entering and/or exiting a country and may include residency-based measures such as transaction taxes, limits or outright prohibitions on the transfer of currencies, securities or other assets. These measures may be economy-wide, sector-specific (usually the financial sector), or industry specific (for example, "strategic" industries). They may apply to all flows, or may differentiate by type or duration of the flow (debt, equity, direct investment; short-term vs. medium-and

long-term). Types of capital controls include exchange controls that prevent or limit the buying and selling of a national currency at the market rate, caps on the allowed volume for the international sale or purchase of various financial assets, transaction taxes, minimum stay requirements, requirements for mandatory approval, or even limits on the amount of money a private citizen is allowed to remove from the country. The imposition of capital controls by a government of a country in which a Fund invests may significantly and adversely affect the values and liquidity of a Fund's investments in the affected jurisdiction and may prevent indefinitely the repatriation of a Fund's assets from the affected jurisdiction.

Concentration Risk

Concentrating investments in related investments increases the risk of loss because the investments may decline in value due to, for example, developments adversely affecting the industries in which the issuers of the investments operate. In addition, investors may buy or sell substantial amounts of a Fund's shares in response to factors affecting or expected to affect a given industry, resulting in extreme inflows and outflows of cash into and out of a Fund. Such inflows or outflows might affect management of a Fund adversely to the extent they were to cause a Fund's cash position or cash requirements to exceed normal levels.

Cyclical Opportunities Risk

A Fund may seek to take advantage of changes in the business cycle by investing in companies that are sensitive to those changes if the Adviser believes they have growth potential. A Fund might sometimes seek to take tactical advantage of short-term market movements or events affecting particular issuers or industries. There is a risk that if the event does not occur as expected, the value of the stock could fall, which in turn could negatively impact a Fund's performance and cause losses on your investment in the Fund.

Equity Issuer Risk

The market price of common stocks and other equity securities may go up or down, sometimes rapidly or unpredictably. Equity securities may decline in value due to factors affecting equity securities markets generally, particularly industries represented in those markets, or the issuer itself. The values of equity securities may decline due to general market conditions that are not specifically related to a particular company, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates, or adverse investor sentiment generally. They also may decline due to factors which affect a particular industry or industries, such as labor shortages or increased production costs and competitive conditions within an industry. In addition, the values of equity securities may decline for a number of reasons that may relate directly to the issuer, such as management performance, financial leverage, non-compliance with regulatory requirements, and reduced demand for the issuer's goods or services. Equity securities generally have greater price volatility than bonds and other debt securities, although under certain market conditions various fixed income investments may have comparable or greater price volatility. The values of equity securities paying dividends at high rates may be more sensitive to change in interest rates than are other equity securities.

A Fund may also invest in preferred securities, which represent an equity or ownership interest in an issuer that pays dividends at a specified rate and that has priority over common stock in the payment of dividends. In addition to many of the risks associated with both debt securities (e.g., interest rate risk and credit risk) and common shares or other equity securities, preferred securities typically contain provisions that allow an issuer, at its discretion, to defer distributions for an extended period. Preferred securities also may contain provisions that allow an issuer, under certain conditions, to skip (in the case of noncumulative preferred securities) or defer (in the case of cumulative preferred securities), dividend payments. If a Fund owns a preferred security that is deferring its distributions, the Fund may be required to report income for tax purposes while it is not receiving any distributions. Preferred stock in some instances is convertible into common shares or other securities. Preferred securities typically contain provisions that allow for redemption in the event of tax or security law changes in addition to call features at the option of the issuer. In the event of a redemption, a Fund may not be able to reinvest the proceeds at comparable or favorable rates of return.

Preferred securities typically do not provide any voting rights, except in cases in which dividends are in arrears beyond a certain time period, which varies by issue. Preferred securities are generally subordinated to bonds and other debt instruments in a company's capital structure in terms of priority to corporate income and liquidation payments, and therefore will be subject to greater credit risk than those debt instruments. Preferred securities may be substantially less liquid than many other securities.

ESG Considerations

ESG factors tend to have many subjective characteristics, can be difficult to analyze, and frequently involve a balancing of a company's business plans, objectives, actual conduct and other factors. ESG factors can vary over different periods and can evolve over time. They may also be difficult to apply consistently across regions, countries, industries or sectors. For these reasons, ESG standards may be aspirational and tend to be stated broadly and applied flexibly. In addition, investors and others may disagree as to whether a certain company satisfies ESG standards given the absence of generally accepted criteria and given inconsistencies in reporting by issuers. Implementation of the Adviser's ESG Policy, as described above in this SAI in "Investment Strategies—ESG Considerations," will vary depending on asset type, and the specific method of implementation is determined by the applicable portfolio management team. There can be no guarantee that a company that a portfolio manager believes to meet one or more ESG standards will actually conduct its affairs in a manner that is less destructive to the environment, or will actually promote positive social and economic developments. Because fixed income investments generally represent a promise to pay principal and interest by an issuer, and not an ownership interest, and may involve complex structures, ESG-related investment considerations may have a more limited impact on risk and return (or may have an impact over a different investment time horizon) relative to other asset classes, and this may be particularly true for shorter-term investments.

The Adviser may review ESG factors through available public records, legal filings and disclosures, investor services or key party engagements, brokerage research and other data sources used in the normal course of the Adviser's fundamental research and analysis, as well as information from third-party ESG data providers and consultants. Information and data obtained from third-party sources may be incomplete, inaccurate or unavailable, which could adversely affect the analysis of the ESG considerations relevant to a particular investment. With respect to certain Fund holdings, such as holdings of securitized investments, data on material ESG considerations may be limited.

Financial Services Risk: A Fund may invest a significant portion of its assets in the financial services sector or may engage in transactions with one or more counterparties in the financial services sector. Financial services companies are subject to extensive governmental regulation which may limit both the amounts and the types of loans and other financial commitments they can make, the interest rates and fees they can charge, the scope of their activities, the prices they can charge and the amount of capital they must maintain. Profitability is largely dependent on the availability and cost of capital funds and can fluctuate significantly when interest rates change or due to increased competition. In addition, deterioration of the credit markets generally may cause an adverse impact in a broad range of markets, including U.S. and international credit and interbank money markets generally, thereby affecting a wide range of financial institutions and markets. Certain events in the financial sector may cause an unusually high degree of volatility in the financial markets, both domestic and foreign, and cause certain financial services companies to incur large losses. Interconnectedness or interdependence among financial services companies increases the risk that the financial distress or failure of one financial services company may materially and adversely affect a number of other financial services companies. Securities of financial services companies may experience a dramatic decline in value when such companies experience substantial declines in the valuations of their assets, take action to raise capital (such as the issuance of debt or equity securities), or cease operations. Events leading to limited liquidity, defaults, non-performance or other adverse developments that affect the financial services industry, or concerns or rumors about any events of these kinds, have in the past and may in the future lead to market-wide liquidity problems, may spread to other industries, and could negatively affect the value and liquidity of the Fund's investments. For example, in response to the rapidly declining financial condition of regional banks Silicon Valley Bank ("SVB") and

Signature Bank (“**Signature**”), the California Department of Financial Protection and Innovation (the “**CDFPI**”) and the New York State Department of Financial Services (the “**NYSDFS**”) closed SVB and Signature on March 10, 2023 and March 12, 2023, respectively, and the FDIC was appointed as receiver for SVB and Signature. Although the U.S. Department of the Treasury, the Federal Reserve and the FDIC have taken measures to stabilize the financial system, uncertainty and liquidity concerns in the broader financial services industry remain. Additionally, should there be additional systemic pressure on the financial system and capital markets, there can be no assurances of the response of any government or regulator, and any response may not be as favorable to industry participants as the measures currently being pursued. In addition, highly publicized issues related to the U.S. and global capital markets in the past have led to significant and widespread investor concerns over the integrity of the capital markets. The current situation related to SVB, Signature, and other regional banks could in the future lead to further rules and regulations for public companies, banks, financial institutions and other participants in the U.S. and global capital markets, and complying with the requirements of any such rules or regulations may be burdensome. Even if not adopted, evaluating and responding to any such proposed rules or regulations could result in increased costs and require significant attention from the Adviser. Separately, credit losses resulting from financial difficulties of borrowers can negatively impact the sector, especially when financial services companies are exposed to non-diversified or concentrated loan portfolios. Financial losses associated with investment activities can negatively impact the sector, especially when financial services companies are exposed to financial leverage. Insurance companies may be subject to severe price competition. Adverse economic, business or political developments could adversely affect financial institutions engaged in mortgage finance or other lending or investing activities directly or indirectly connected to the value of real estate.

Focused Investment Risk

A Fund that invests a substantial portion of its assets in a particular market, industry, sector, group of industries or sectors, country, region, group of countries, or asset class is subject to greater risk than a Fund that invests in a more diverse investment portfolio. In addition, the value of such a Fund is more susceptible to any single economic, market, political, regulatory or other occurrence affecting, for example, the particular markets, industries, regions, sectors, or asset classes in which the Funds are invested. This is because, for example, issuers in a particular market, industry, region sector or asset class may react similarly to specific economic, market, regulatory, political, or other developments. The particular markets, industries, regions, sectors or asset classes in which a Fund may focus its investments may change over time and a Fund may alter its focus at inopportune times.

To the extent a Fund invests in the securities of a limited number of issuers or assets related to particular commodities, it is particularly exposed to adverse developments affecting those issuers or commodities, and a decline in the market value of a particular security or commodity held by the Fund may affect the Fund’s performance more than if the Fund invested in the securities of a larger number of issuers or assets related to a broader group of commodities. In addition, the limited number of issuers or commodities to which a Fund may be exposed may provide the Fund exposure to substantially the same market, industry, sector, group of industries or sectors, country, region, group of countries, or asset class, which may increase the risk of loss as a result of focusing the Fund’s investments, as discussed above.

Foreign Currency

Foreign currencies may decline in value relative to the U.S. dollar and adversely affect the value of a Fund’s investments in foreign currencies, securities denominated in foreign currencies, and derivatives that provide exposure to foreign currencies. The values of foreign currencies, securities denominated in foreign currencies, or derivatives that provide exposure to foreign currencies may be adversely affected by currency exchange rates, currency exchange control regulations, foreign withholding or other taxes, restrictions or prohibitions on the repatriation of foreign currencies, changes in supply and demand in the currency exchange markets, actual or perceived changes in interest rates, intervention (or the failure to intervene) by the U.S. or foreign governments,

central banks, or supranational agencies such as the International Monetary Fund, or other political and economic developments in the U.S. or abroad. Currencies of emerging market countries have sometimes experienced devaluations relative to the U.S. dollar, and major devaluations have historically occurred in certain countries. A devaluation of the currency in which portfolio securities are denominated will negatively impact the value of those securities. The local emerging market currencies in which a Fund may be invested from time to time may experience substantially greater volatility against the U.S. dollar than the major convertible currencies of developed countries. To the extent a Fund has invested in debt instruments of companies located or doing business in foreign markets and that have issued debt instruments denominated in U.S. dollars or another non-local currency, fluctuations in currency exchange rates could also negatively impact such investments. For example, increases in the value of the U.S. dollar relative to its value at the time the debt was issued can increase the costs of interest and repayment to the issuer and could result in defaults on the issuer's debt obligations.

Officials in foreign countries may from time to time take actions in respect of their currencies which could significantly affect the value of a Fund's assets denominated in those currencies or the liquidity of such investments. For example, a foreign government may unilaterally devalue its currency against other currencies, which would typically have the effect of reducing the U.S. dollar value of investments denominated in that currency. A foreign government may also limit the convertibility or repatriation of its currency or assets denominated in its currency, which would adversely affect the U.S. dollar value and liquidity of investments denominated in that currency. In addition, although a Fund's income may be received or realized in local currencies, the Fund will be required to compute and distribute its income in U.S. dollars. As a result, if the exchange rate for any such currency declines after a Fund's income has been earned and translated into U.S. dollars but before payment to shareholders, the Fund could be required to liquidate portfolio securities to make such distributions.

Futures Contracts and Options on Futures

There are certain risks inherent in the use of futures contracts and options on futures contracts. Successful use of futures contracts by a Fund is subject to the ability of the Adviser to correctly predict movements in the direction of underlying asset prices or changes in market conditions. Forecasting market movements is extremely difficult, and whether any hedging strategy will be successful is highly uncertain. Futures prices may be highly volatile and may at times be negative. In addition, the prices of futures, for a number of reasons, may not correlate perfectly with movements in their respective underlying commodities, securities, currencies or indices due to certain market distortions. First, all participants in the futures market are subject to margin deposit requirements. Such requirements may cause investors to close futures contracts through offsetting transactions which could distort the normal relationship between the underlying commodity, security, currency or index and corresponding futures markets. Second, the margin requirements in the futures markets are less onerous than margin requirements in the securities markets in general, and as a result the futures markets may attract more speculators than the securities markets do. Increased participation by speculators in the futures markets may also cause temporary price distortions. Due to the possibility of price distortion, even a correct forecast of general market trends may not result in a successful hedging transaction over a very short time period. In addition, when futures contracts are used for hedging purposes, there can be no assurance that there will be a correlation between price movements in the underlying commodities, securities, currencies or indices which are the subject of hedge and the price movements in the corresponding futures markets.

Positions in futures contracts and options on futures contracts may be closed out only on the exchange or board of trade on which they were entered into, and there can be no assurance that an active market will exist for a particular contract or option at any particular time. If a Fund has hedged against the possibility of an increase in interest rates or a decrease in the value of portfolio securities and interest rates fall or the value of portfolio securities increase instead, a Fund will lose part or all of the benefit of the increased value of securities that it has hedged because it will have offsetting losses in its futures positions. In addition, in such situations, if a Fund has insufficient cash, it may have to sell securities to meet daily variation margin requirements at a time when it may be disadvantageous to do so. These sales of securities may but will not necessarily be at increased prices that

reflect the decline in interest rates. While utilization of futures contracts and options on futures contracts may be advantageous to the Fund, if the Fund is not successful in employing such instruments in managing the Fund's investments, the Fund's performance will be worse than if the Fund did not make such investments.

Exchanges limit the amount by which the price of a futures contract may move on any day. If the price moves equal the daily limit on successive days, then it may prove impossible to liquidate a futures position until the daily limit moves have ceased. In the event of adverse price movements, a Fund would continue to be required to make daily cash payments of variation margin on open futures positions. In such situations, if a Fund has insufficient cash, it may have to sell portfolio securities to meet daily variation margin requirements at a time when it may be disadvantageous to do so. In addition, a Fund may be required to take or make delivery of the instruments underlying futures contracts it holds at a time when it is disadvantageous to do so. The inability to close out options and futures positions could also have an adverse impact on a Fund's ability to hedge its portfolio effectively. Exchanges may cancel trades in limited circumstances, for example, if the exchange believes that allowing such trades to stand as executed could have an adverse impact on the stability or integrity of the market. Any such cancellation may adversely affect the performance of a Fund. In addition, a Fund's futures broker may limit a Fund's ability to invest in certain futures contracts. Such restrictions may adversely affect the Fund's performance and its ability to achieve its investment objective.

Futures contracts and options thereon which are purchased or sold on foreign commodities exchanges may have greater price volatility than their U.S. counterparts. Furthermore, foreign commodities exchanges may be less regulated and under less governmental scrutiny than U.S. exchanges. Brokerage commissions and dealer mark-ups, clearing costs and other transaction costs may be higher on foreign exchanges. Greater margin requirements may limit a Fund's ability to enter into certain commodity transactions on foreign exchanges. Moreover, differences in clearance and delivery requirements on foreign exchanges may occasion delays in the settlement of a Fund's transactions effected on foreign exchanges. Investments in futures contracts and options thereon are subject to the risks of cleared derivatives transactions described under "Counterparty Risk" in this SAI.

There is no assurance that a liquid market will exist for futures contracts and related options in which a Fund may invest. The markets for futures positions may be thinly traded from time to time. In addition, futures positions may become illiquid due to daily price limits taking effect or due to market disruptions. Market liquidity risk is enhanced in certain markets such as options on foreign currency futures contracts. In the event a liquid market does not exist, it may not be possible to close out a futures position, and in the event of adverse price movements, a Fund would continue to be required to make daily cash payments of variation margin. In addition, limitations imposed by an exchange or board of trade on which futures contracts are traded may compel or prevent a Fund from closing out a contract which may result in reduced gain or increased loss to the Fund. The absence of a liquid market in futures contracts might cause a Fund to make or take delivery of the underlying asset at a time when it may be disadvantageous to do so.

Compared to the purchase or sale of futures contracts, the purchase of call or put options on futures contracts involves less potential risk to a Fund because the maximum amount at risk is the premium paid for the options (plus transaction costs). However, there may be circumstances when the purchase of a call or put option on a futures contract would result in a loss to a Fund notwithstanding that the purchase or sale of a futures contract would not result in a loss, as in the instance where there is no movement in the prices of the futures contract or underlying asset.

See also "Risks Arising from Government Regulation of Derivatives" below.

Large Shareholder Risk

Certain account holders, including funds or accounts over which the Adviser has investment discretion, may from time to time own or control a significant percentage of a Fund's shares. For example, the Adviser and/or its related parties currently provide asset allocation investment advice, including recommending the purchase and/or

sale of shares of the other Funds, to a number of large investors. The Funds are subject to the risk that a redemption by large shareholders of all or a portion of their Fund shares or a purchase of Fund shares in large amounts and/or on a frequent basis, including as a result of asset allocation decisions made by the Adviser, will adversely affect a Fund's performance if it is forced to sell portfolio securities or invest cash when the Adviser would not otherwise choose to do so. This risk will be particularly pronounced if one shareholder owns a substantial portion of the Fund. Redemptions of a large number of shares may affect the liquidity of a Fund's portfolio, increase the Fund's transaction costs and/or lead to the liquidation of the Fund. Such transactions also potentially limit the use of any capital loss carryforwards and certain other losses to offset future realized capital gains (if any).

Legal and Regulatory Risk

Legal, tax and regulatory changes could occur and may adversely affect the Funds and their ability to pursue its investment strategies and/or increase the costs of implementing such strategies. New (or revised) laws or regulations may be imposed by the CFTC, the SEC, the IRS, the U.S. Federal Reserve or other banking regulators, other governmental regulatory authorities or self-regulatory organizations that supervise the financial markets that could adversely affect the Funds. In particular, these agencies have implemented or are in the process of implementing a variety of new rules pursuant to financial reform legislation in the United States. The EU, the United Kingdom, and some other jurisdictions have implemented or are in the process of implementing similar requirements. The Funds also may be adversely affected by changes in the enforcement or interpretation of existing statutes and rules by these governmental regulatory authorities or self-regulatory organizations.

In addition, the securities and derivatives markets are subject to comprehensive statutes, regulations and margin requirements. The Funds and the Adviser have historically been eligible for exemptions from certain regulations. However, there is no assurance that the Funds and the Adviser will continue to be eligible for such exemptions. The CFTC, the SEC, the Federal Deposit Insurance Corporation, other regulators and self-regulatory organizations and exchanges are also authorized by statute, regulation and otherwise to take extraordinary actions in the event of market emergencies. To the extent a Fund invests in the derivatives and futures markets, see also "Risks Arising from Government Regulation of Derivatives" below and "Clearing Broker and Central Clearing Counterparty Risk" above.

The CFTC and U.S. futures exchanges have established (and continue to evaluate and revise) speculative position limits, referred to as "position limits," on the maximum net long or net short positions which any person, or group of persons acting in concert, may hold or control in certain futures and options on futures contracts. In addition, federal position limits apply to swaps that are economically equivalent to futures contracts that are subject to CFTC set speculative limits. All positions owned or controlled by the same person or entity, even if in different accounts, must be aggregated for purposes of determining whether the applicable position limits have been exceeded, unless an exemption applies. Thus, even if the Funds do not intend to exceed applicable position limits, it is possible that different clients managed by the Adviser and its related parties may be aggregated for this purpose. Any modifications of trading decisions or elimination of open positions that may be required to avoid exceeding such limits may adversely affect the performance of the Funds and each respective Fund's ability to pursue its investment strategies. A violation of position limits could also lead to regulatory action materially adverse to a Fund's investment strategies.

Rules implementing the credit risk retention requirements of the Dodd-Frank Act for asset-backed securities require the sponsor of certain securitization vehicles (or a majority owned affiliate of such sponsor) to retain, and to refrain from transferring, selling, conveying to a third party, or hedging the credit risk on a portion of the assets transferred, sold, or conveyed through the issuance of the asset-backed securities of such vehicle, subject to certain exceptions. These requirements may increase the costs to originators, securitizers, and, in certain cases, collateral managers of securitization vehicles in which a Fund may invest, which costs could be passed along to such Fund as an investor in such vehicles. In addition, the costs imposed by the risk retention rules on originators, securitizers and/or collateral managers may result in a reduction of the number of new offerings of

asset-backed securities and thus in fewer investment opportunities for the Funds. A reduction in the number of new securitizations could also reduce liquidity in the markets for certain types of financial assets that are typically held by securitization vehicles, which in turn could negatively affect the returns on a Fund's investment in asset-backed securities.

Investors should also be aware that some EU-regulated institutions (including banks, certain investment firms, and authorized managers of alternative investment funds) are restricted from investing in securitizations (including U.S.-related securitizations), unless, in summary: (i) the institution is able to demonstrate that it has undertaken certain due diligence in respect of various matters, including its investment position, the underlying assets, and (in the case of authorized managers of alternative investment funds) the sponsor and the originator of the securitization; and (ii) the originator, sponsor, or original lender of the securitization has explicitly disclosed to the institution that it will retain, on an ongoing basis, a net economic interest of not less than 5% of specified credit risk tranches or asset exposures related to the securitization. Although these requirements do not apply directly to the Funds, the costs of compliance, in the case of any securitization within the EU risk retention rules in which a Fund has invested or is seeking to invest, could be indirectly borne by the Fund and the other investors in the securitization. See also "Risks Arising from Government Regulation of Derivatives" below.

Models and Data Risk

The Adviser may utilize various proprietary quantitative models or related data in connection with providing investment management services to a Fund. There is a possibility that one or all of the quantitative models may fail to identify profitable opportunities. In addition, failures to properly gather, organize, and analyze large amounts of data or errors in a model or data, or in the application of such models, may result in, among other things, execution and investment allocation failures and investment losses. For example, the models may incorrectly identify opportunities or data used in the construction and application of models may prove to be inaccurate or stale, which may result in misidentified opportunities that may lead to substantial losses for a Fund. A given model may be more effective with certain instruments or strategies than others, and there can be no assurance that any model can identify and incorporate all factors that will affect an investment's price or performance. Investments selected using the models may perform differently than expected as a result of, among other things, the market factors used in creating models, the weight given to each such market factor, changes from the market factors' historical trends and technical issues in the construction and implementation of the models (*e.g.*, data problems, and/or software issues). The Adviser's judgments about the weightings among various models and strategies may be incorrect, adversely affecting performance.

Operational and Information Security Risks

The Funds and their service providers depend on complex information technology and communications systems to conduct business functions, making them susceptible to operational and information security risks. Any problems relating to the performance and effectiveness of security procedures used by a Fund or its service providers to protect a Fund's assets, such as algorithms, codes, passwords, multiple signature systems, encryption and telephone call-backs, may have an adverse impact on an investment in a Fund. For example, design or system failures or malfunctions, human error, faulty software or data processing systems, power or communications outages, acts of God, or cyber-attacks may lead to operational disruptions and potential losses to a Fund. Cyber-attacks include, among other behaviors, stealing or corrupting data maintained online or digitally, denial of service attacks on websites, the unauthorized release of confidential information and causing operational disruption. Successful cyber-attacks against, or security breakdowns of, a Fund or its Adviser, custodians, fund accountant, fund administrator, transfer agent, pricing vendors and/or other third party service providers may adversely impact the Funds and their shareholders. For instance, cyber-attacks or other operational issues may interfere with the processing of shareholder transactions, impact a Fund's ability to calculate its NAV, cause the release of private shareholder information or confidential Fund information, impede trading, cause reputational damage, and subject a Fund to regulatory fines, penalties or financial losses, reimbursement or other compensation costs, and/or additional compliance costs. The Funds also may incur substantial costs for

cybersecurity risk management in order to guard against any cyber incidents in the future. Furthermore, as a Fund's assets grow, it may become a more appealing target for cybersecurity threats such as hackers and malware. In general, cyber-attacks result from deliberate attacks but unintentional events may have effects similar to those caused by cyber-attacks. Additionally, outside parties may attempt to fraudulently induce employees of a Fund or the Adviser or its service providers to disclose sensitive information in order to gain access to a Fund's infrastructure. Similar types of risks also are present for issuers of securities in which the Funds invest, which could result in material adverse consequences for such issuers and may cause a Fund's investment in such securities to lose value. In addition, cyberattacks involving a counterparty to a Fund could affect such a counterparty's ability to meet its obligations to the Fund, which may result in losses to the Fund and its shareholders. In addition, the adoption of work-from-home arrangements by the Funds, the Adviser or their service providers could increase all of the above risks, create additional data and information accessibility concerns, and make the Funds, the Adviser or their service providers more susceptible to operational disruptions, any of which could adversely impact their operations. While the Funds or their service providers may have established business continuity plans and systems designed to guard against such operational failures and cyber-attacks and the adverse effects of such events, there are inherent limitations in such plans and systems including the possibility that certain risks have not been identified, in large part because different, evolving or unknown threats or risks may emerge in the future. The Adviser and the Funds do not control the business continuity and cybersecurity plans and systems put in place by third-party service providers, and such third-party service providers may have no or limited indemnification obligations to the Adviser or the Funds.

Ratings Categories – Use of Credit Ratings by the Funds

A description of the rating categories as published by Moody's and S&P is set forth in the Appendix to this SAI. (Other NRSROs use different categorizations, which may also be utilized by the Funds.) Ratings assigned by Moody's, S&P or other NRSROs to securities acquired by a Fund reflect only the views of those agencies as to the quality of the securities they have undertaken to rate. Credit ratings are based largely on the issuer's historical financial condition and the rating agencies' investment analysis at the time of rating. The rating assigned to any particular issuer does not necessarily reflect the issuer's current financial condition, and does not reflect an assessment of an investment's volatility or liquidity. It should be emphasized, however, that ratings are relative and subjective and are not absolute standards of quality. Although a Fund's portfolio managers may consider credit ratings in making investment decisions, they typically perform their own investment analysis. There is no assurance that a rating assigned initially will not change.

When an investment is rated by more than one NRSRO, the Adviser will utilize the highest credit rating for that security for purposes of applying any investment policies that incorporate credit ratings (*e.g.*, a policy to invest a certain percentage of a Fund's assets in securities rated investment grade) except where a Fund has a policy to invest a certain minimum percentage of its assets in securities that are rated below investment grade, in which case the Fund will utilize the lowest credit rating that applies to that investment.

Reinvestment Risk

Income from a Fund's portfolio may decline when the Fund invests the proceeds from investment income, sales of portfolio securities or matured, traded or called debt obligations. For instance, during periods of declining interest rates, an issuer of debt obligations may exercise an option to redeem securities prior to maturity, forcing a Fund to reinvest the proceeds in lower-yielding securities. A decline in income received by a Fund from its investments is likely to have a negative effect on the yield and total return of the Fund's shares.

Reliance on the Adviser

Each Fund's ability to achieve its investment objective is dependent upon the Adviser's ability to identify profitable investment opportunities for the Fund. While the portfolio managers of a Fund may have

considerable experience in managing other portfolios with investment objectives, policies and strategies that are similar, the past experience of the portfolio managers, including with other strategies and funds, does not guarantee future results for the Fund.

Repurchase Agreements

Entering into repurchase agreements subjects the Fund to the risks described under “Counterparty Risk” in this SAI. In the event of a default or bankruptcy by a selling financial institution under a repurchase agreement, a Fund will seek to sell the underlying security serving as collateral. However, this could involve certain costs or delays, and, to the extent that proceeds from any sale were less than the repurchase price, the Fund could suffer a loss. Each Fund follows procedures designed to minimize the risks associated with repurchase agreements, including effecting repurchase transactions only with large, well-capitalized and well-established financial institutions and specifying the required value of the collateral underlying the agreement. See also “Counterparty Risk” and “Risks Arising from Government Regulation of Derivatives” in this SAI.

Reverse Repurchase Agreements

A reverse repurchase agreement involves the sale of a portfolio-eligible security by a Fixed Income Fund, coupled with its agreement to repurchase the instrument at a specified time and price. Under a reverse repurchase agreement, a Fixed Income Fund continues to be entitled to receive any principal and interest payments on the underlying security during the term of the agreement. Reverse repurchase agreements involve leverage risk; a Fixed Income Fund may lose money as a result of declines in the values both of the security subject to the reverse repurchase agreement and the instruments in which the Fixed Income Fund invested the proceeds of the reverse repurchase agreement. Reverse repurchase agreements are considered borrowings by the Fixed Income Fund.

A Fixed Income Fund’s use of reverse repurchase agreements, dollar rolls and similar transactions is subject to the risk that the market value of the securities that the Fixed Income Fund is obligated to purchase or repurchase under the agreement may decline below the purchase or repurchase price. A Fixed Income Fund’s use of such agreements also subjects the Fixed Income Fund to the risks described under “Counterparty Risk” in this SAI. For example, in the event the buyer of securities under a reverse repurchase agreement or dollar roll files for bankruptcy or becomes insolvent, the Fixed Income Fund’s use of the proceeds of the agreement may be restricted pending a determination by the other party, or its trustee or receiver, whether to enforce the Fixed Income Fund’s obligation to purchase or repurchase the securities. See also “Risks Arising from Government Regulation of Derivatives” in this SAI.

Risks Arising from Government Regulation of Derivatives

U.S. and non-U.S. legislative and regulatory reforms, including the Dodd-Frank Act, have resulted in new regulation of derivative markets, including clearing, margin, reporting, recordkeeping and registration requirements for certain types of swap contracts and other derivatives. For example, rules under the Dodd-Frank Act require certain OTC derivatives, including certain interest rate swaps and certain index credit default swaps, to be executed on a regulated market and cleared through a central counterparty, which may result in increased margin requirements and costs for a Fund. In addition, the U.S. government, the UK, the EU and various other jurisdictions have adopted mandatory minimum margin requirements for uncleared derivatives, which will require a Fund to provide more margin for its derivatives, and therefore make derivative transactions more expensive. Because these requirements are relatively new and evolving, their ultimate impact remains unclear. Such regulations could, among other things, restrict a Fixed Income Fund’s ability to engage in swap transactions (for example, by making certain types of swap transactions no longer available to the Fixed Income Fund) and/or increase the costs of such swap transactions (for example, by increasing margin or capital requirements), and the Fixed Income Fund may as a result be unable to execute its investment strategies in a manner the Adviser might otherwise choose.

Rule 18f-4 governs a Fund's use of derivative investments and certain financing transactions (e.g., repurchase or reverse repurchase agreements). Among other things, Rule 18f-4 requires funds that invest in derivative instruments beyond a specified limited amount to apply a value-at-risk based limit to their use of certain derivative instruments and financing transactions and to adopt and implement a derivatives risk management program. Pursuant to Rule 18f-4, the Board has appointed a committee comprised of representatives of the Adviser to serve as the derivatives risk manager responsible for overseeing the derivatives risk management program required to be adopted by those series of the Trust that invest in derivatives beyond the limited amount specified in Rule 18f-4. Funds that use derivative instruments (beyond certain currency and interest rate hedging transactions) in a limited amount are not subject to the full requirements of Rule 18f-4. The application of Rule 18f-4 to a Fund could restrict its ability to utilize derivative investments and financing transactions and prevent a Fund from implementing its principal investment strategies as described herein, which may result in changes to a Fixed Income Fund's principal investment strategies and could adversely affect the Fixed Income Fund's performance and its ability to achieve its investment objective.

Risks of Unrated Securities

Each Fund may purchase unrated securities (which are not rated by a rating agency) unless prohibited by its investment policies. Unrated securities may be less liquid than comparable rated securities and involve the risk that the Adviser may not accurately evaluate the security's comparative credit rating. To the extent that a Fund invests in unrated securities, the Fund's success in achieving its investment objective may depend more heavily on the Adviser's creditworthiness analysis than if the Fund invested exclusively in rated securities.

Securities or Sector Selection Risk

Securities or Sector Selection Risk refers to the risk that the securities held by a Fund will underperform securities held in other funds investing in similar asset classes or comparable benchmarks because of a portfolio manager's choice of securities or sectors for investment. To the extent a Fund allocates a higher percentage of its investment portfolio to a particular sector or related sectors, the Fund will be more susceptible to events or factors affecting companies in that sector or related sectors. For example, the values of securities of companies in the same or related sectors may be negatively affected by the common characteristics they share, the common business risks to which they are subject, common regulatory burdens, or regulatory changes that affect them similarly. Such characteristics, risks, burdens or changes include, but are not limited to, changes in governmental regulation, inflation or deflation, rising or falling interest rates, competition from new entrants, and other economic, market, political or other developments specific to that sector or related sectors.

Securities Lending

Each Fund may lend portfolio securities with a value up to 33 1/3% of its total assets, including collateral received for securities lent. If a Fund lends securities, there is a risk that the securities will not be available to the Fund on a timely basis, and the Fund, therefore, may lose the opportunity to sell the securities at a desirable price. Also, there is the risk that the value of the investment of the collateral could decline causing the Fund to lose money. In addition, as with other extensions of credit, there is the risk of possible delay in receiving additional collateral or in the recovery of the securities or possible loss of rights in the collateral should the borrower fail financially.

Regulations require certain bank-regulated counterparties and certain of their affiliates to include in certain financial contracts, including many securities lending agreements, terms that delay or restrict the rights of counterparties, such as a Fund, to terminate such agreements, foreclose upon collateral, exercise other default rights or restrict transfers of credit support in the event that the counterparty and/or its affiliates are subject to certain types of resolution or insolvency proceedings. It is possible that these new requirements, as well as potential additional government regulation and other developments in the market, could adversely affect a Fund's ability to terminate existing securities lending agreements or to realize amounts to be received under such

agreements in the event the counterparty or its affiliate becomes subject to a resolution or insolvency proceeding. See also “Counterparty Risk” and “Risks Arising From Government Regulation of Derivatives” in this SAI.

Service Providers

The Funds may be subject to credit risk with respect to their custodian as well as any sub-custodian in the Funds’ custodian’s global network. The Funds could be adversely affected in the event of a custodian’s or sub-custodian’s bankruptcy, financial insolvency or financial distress. Even if a Fund’s custodian or sub-custodian does have sufficient assets to meet all claims, which may not always be the case, there could still be a delay before the Fund receives assets to satisfy the Fund’s claims. Market fluctuations during any period of delay could adversely affect the performance of a Fund if the Fund is unable to dispose of a security being held by the custodian. In addition, in the event of the insolvency or bankruptcy of the Funds’ administrator, transfer agent or custodian there are likely to be operational and other delays and additional costs and expenses associated with changes in service provider arrangements that could adversely affect the Funds. The Funds could also be adversely affected by the misfeasance of their custodian, sub-custodians, or other service providers. The Funds are also subject to the risk of loss caused by inadequate procedures and controls, human error, and system failures by a service provider to it or an issuer of a portfolio security, each of which may negatively affect a Fund’s performance. In addition, a service provider may be unable to provide a NAV for a Fund or share class on a timely basis.

Small Companies Risk

Investing in small capitalization companies may involve special risks because those companies may have narrower product lines, more limited financial resources, fewer experienced managers, dependence on a few key employees, and a more limited trading market for their stocks, as compared with larger companies. In addition, securities of these companies are subject to the risk that, during certain periods, the liquidity of particular issuers or industries will shrink or disappear with little forewarning as a result of adverse economic or market conditions, or adverse investor perceptions, whether or not accurate. Securities of smaller capitalization issuers may therefore be subject to greater price volatility and may decline more significantly in market downturns than securities of larger companies. Smaller capitalization issuers may also require substantial additional capital to support their operations, to finance expansion or to maintain their competitive position; and may have substantial borrowings or may otherwise have a weak financial condition and may be susceptible to bankruptcy. Transaction costs for these investments are often higher than those of larger capitalization companies. There is typically less publicly available information about small capitalization companies.

U.S. Government Securities Risk

Some U.S. government securities, such as Treasury bills, notes, and bonds and mortgage-backed securities guaranteed by the Government National Mortgage Association (**Ginnie Mae**), are supported by the full faith and credit of the United States; others are supported by the right of the issuer to borrow from the U.S. Treasury; others are supported by the discretionary authority of the U.S. government to purchase the agency’s obligations; still others are supported only by the credit of the issuing agency, instrumentality, or enterprise. Although U.S. government-sponsored enterprises may be chartered or sponsored by Congress, they are not funded by Congressional appropriations, their securities are not issued by the U.S. Treasury, their obligations are not supported by the full faith and credit of the U.S. government, and so investments in their securities or obligations issued by them involve greater risk than investments in other types of U.S. government securities. No assurance can be given that the U.S. government will provide financial support to its agencies and sponsored entities if it is not obligated by law to do so.

In addition, certain governmental entities have been subject to regulatory scrutiny regarding their accounting policies and practices and other concerns that may result in legislation, changes in regulatory oversight and/or other consequences that could adversely affect the credit quality, availability or investment character of securities issued or guaranteed by these entities.

The events surrounding the U.S. federal government debt ceiling and any resulting agreement (and similar political, economic and other developments) could adversely affect a Fund's ability to achieve its investment objective. For example, a downgrade of the long-term sovereign credit rating of the U.S. could increase volatility in both stock and bond markets, result in higher interest rates and lower Treasury prices and increase the costs of all kinds of debt. These events and similar events in other areas of the world could have significant adverse effects on the economy generally and could result in significant adverse impacts on issuers of securities held by the Funds and the Funds themselves. The Adviser cannot predict the effects of these or similar events in the future on the U.S. economy and securities markets or on the Funds' portfolios.

From time to time, uncertainty regarding the status of negotiations in the U.S. government to increase the statutory debt ceiling could: increase the risk that the U.S. government may default on payments on certain U.S. government securities; cause the credit rating of the U.S. government to be downgraded or increase volatility in both stock and bond markets; result in higher interest rates; reduce prices of U.S. Treasury securities; and/or increase the costs of certain kinds of debt.

The Adviser may not timely anticipate or manage existing, new or additional risks, contingencies or developments. In recent periods, the values of U.S. government securities have been affected substantially by increased demand for them around the world. Changes in the demand for U.S. government securities may occur at any time and may result in increased volatility in the values of those securities.

Fixed Income Funds only

Asset-Backed Securities

Asset-backed investments tend to increase in value less than other debt securities of similar maturity and credit quality when interest rates decline, but are subject to a similar or greater risk of decline in market value during periods of rising interest rates. In a period of declining interest rates, pre-payments on asset-backed securities may increase and a Fixed Income Fund may be unable to reinvest those prepaid amounts in investments providing the same rate of interest as the pre-paid obligations. Asset-backed securities are structured like mortgage-backed securities, but instead of mortgage loans or interests in mortgage loans, the underlying assets may include a wide variety of items, including, without limitation, motor vehicle installment sales or installment loan contracts, leases of various types of real, personal and other property (including those relating to aircrafts, containers, railroads, telecommunication, energy, and/or other infrastructure assets and infrastructure-related assets), receivables from credit card agreements and automobile finance agreements, home equity sharing agreements, student loans, consumer loans, home equity loans, mobile home loans, boat loans, and income from other non-mortgage-related income streams, such as income from business and small business loans, project finance loans, renewable energy projects, personal financial assets, timeshare receivables and franchise rights. They may also include asset-backed securities backed by whole loans or fractions of whole loans issued by alternative lending platforms and securitized by those platforms or other entities (such as third-party originators or brokers). There is a risk that borrowers may default on their obligations in respect of those underlying obligations.

Asset-backed securities involve the risk that borrowers may default on the obligations backing them and that the values of and interest earned on such investments will decline as a result. Loans made to lower quality borrowers, including those of sub-prime quality, involve a higher risk of default. Therefore, the values of asset-backed securities backed by lower quality loans, including those of sub-prime quality, may suffer significantly greater declines in value due to defaults, payment delays or a perceived increased risk of default, especially during periods when economic conditions worsen.

Certain assets underlying asset-backed securities are subject to prepayment, which may reduce the overall return to asset-backed security holders. Holders also may experience delays in payment or losses on the securities if the full amounts due on underlying sales contracts or receivables are not realized by the issuing trust because of,

among others, unanticipated legal or administrative costs of enforcing the contracts or because of depreciation or damage to the collateral securing certain contracts, or other factors. The values of asset-backed securities may be substantially dependent on the servicing of the underlying asset pools, and are therefore subject to risks associated with the negligence or malfeasance by their servicers and to the credit risk or insolvency of their servicers. In certain circumstances, the mishandling of related documentation also may affect the rights of security holders in and to the underlying collateral. The insolvency of entities that generate receivables or that utilize the assets may result in added costs and delays in addition to losses associated with a decline in the value of underlying assets. Certain asset-backed securities do not have the benefit of the same security interest in the related collateral as do mortgage-backed securities; nor are they provided government guarantees of repayment as are some mortgage-backed securities. For example, credit card receivables generally are unsecured, and the debtors are entitled to the protection of a number of state and federal consumer credit laws, many of which give such debtors the right to set off certain amounts owed on the credit cards, thereby reducing the balance due. In addition, some issuers of automobile receivables permit the servicers to retain possession of the underlying obligations. If the servicer were to sell these obligations to another party, there is a risk that the purchaser would acquire an interest superior to that of the holders of the related automobile receivables. The impairment of the value of collateral or other assets underlying an asset-backed security, such as a result of non-payment of loans or non-performance of other collateral or underlying assets, may result in a reduction in the value of such asset-backed securities and losses to a Fixed Income Fund. It is possible that many or all asset-backed securities will fall out of favor at any time or over time with investors, affecting adversely the values and liquidity of the securities.

During periods of deteriorating economic conditions, such as recessions or periods of rising unemployment, delinquencies and losses generally increase, sometimes dramatically, with respect to securitizations involving loans, sales contracts, receivables and other obligations underlying asset-backed securities.

The values of asset-backed securities may also be substantially dependent on the servicing of and diligence performed by their servicers or sponsors. For example, a Fixed Income Fund may suffer losses due to a servicer's, sponsor's or platform's negligence or malfeasance, such as through the mishandling of certain documentation affecting security holders' rights in and to underlying collateral or the failure to update or collect accurate and complete borrower information. In addition, the values of asset-backed securities may be adversely affected by the credit quality of the servicer or sponsor, as applicable. Certain servicers or sponsors may have limited operating histories to evaluate. The insolvency of a servicer or sponsor may result in added costs and delays in addition to losses associated with a decline in the value of underlying assets. A Fixed Income Fund also may experience delays in payment or losses on its investments if the full amount due on underlying collateral is not realized, which may occur because of unanticipated legal or administrative costs of enforcing the contracts, depreciation or damage to the collateral securing certain contracts, under-collateralization or other factors.

Collateralized Debt Obligations Risk

CDOs are a type of asset-backed security, and include CBOs, CLOs, and other similarly structured securities. A CBO is a trust which may be backed by a diversified pool of high risk, below investment grade fixed income securities. A CLO is a trust typically collateralized by a pool of loans, which may include, among others, domestic and foreign senior secured loans, senior unsecured loans, second lien loans or other types of subordinate loans, and mezzanine loans, including loans that may be rated below investment grade or equivalent unrated loans and including loans that may be covenant-lite. CDOs may charge management fees and administrative expenses. The cash flows from the CDO trust are generally split into two or more portions, called tranches, varying in risk and yield. Senior tranches are paid from the cash flows from the underlying assets before the junior tranches and equity or "first loss" tranches. Losses are first borne by the equity tranches, next by the junior tranches, and finally by the senior tranches. Holders of interests in the senior tranches are entitled to the lowest interest rate payments but those interests generally involve less credit risk as they are typically paid before junior tranches. The holders of interests in the most junior tranches, such as equity tranches, typically are entitled to be paid the highest interest rate payments but suffer the highest risk of loss should the holder of an

underlying debt instrument default. If some debt instruments default and the cash collected by the CDO is insufficient to pay all of its investors, those in the lowest, most junior tranches suffer losses first. Since it is partially protected from defaults, a senior tranche from a CDO trust typically has higher ratings and lower potential yields than the underlying securities, and can be rated investment grade. Despite the protection from the equity tranche, more senior CDO tranches can experience substantial losses due to actual defaults, increased sensitivity to defaults due to collateral default and disappearance of protecting tranches, market anticipation of defaults and aversion to CDO securities as a class.

The risks of an investment in a CDO depend largely on the quality and type of the collateral and the tranche of the CDO in which a Fixed Income Fund invests. Normally, CBOs, CLOs and other CDOs are privately offered and sold, and thus are not registered under the securities laws. As a result, there may be a limited secondary market for investments in CDOs and such investments may be illiquid. In addition to the risks associated with debt instruments (*e.g.*, interest rate risk and credit risk), CDOs carry additional risks including, but not limited to: (i) the possibility that distributions from collateral will not be adequate to make interest or other payments; (ii) the quality of the collateral may decline in value or default; (iii) the possibility that a Fixed Income Fund may invest in CDOs that are subordinate to other classes of the issuer's securities; and (iv) the complex structure of the security may not be fully understood at the time of investment and may produce disputes with the issuer or unexpected investment results.

During periods of deteriorating economic conditions, such as recessions or periods of rising unemployment, delinquencies and losses generally increase, sometimes dramatically, with respect to debt obligations.

Counterparty Risk

A Fixed Income Fund will be subject to the credit risk presented by another party (whether a clearing corporation in the case of exchange-traded or cleared instruments or another third party in the case of OTC instruments) to the extent the party promises to honor an obligation to the Fixed Income Fund (an obligor) with respect to a transaction, such as securities loans, repurchase agreements or certain derivatives (including swaps). There can be no assurance that an obligor will be able or willing to meet its obligations. If a counterparty becomes bankrupt or insolvent or otherwise fails or is unwilling to perform its obligations to a Fixed Income Fund due to financial difficulties or for other reasons, the Fixed Income Fund may experience significant losses or delays in enforcing contractual remedies and/or obtaining any recovery from the counterparty, including realizing on any collateral the counterparty has provided in respect of the counterparty's obligations to the Fixed Income Fund or recovering collateral that the Fixed Income Fund has provided and is entitled to recover. The Fixed Income Fund may have to provide or may hold at various times significant amounts of collateral with respect to one or more counterparties.

If a Fixed Income Fund's claim against a counterparty is unsecured, the Fixed Income Fund will likely be treated as a general creditor of such counterparty to the extent of such unsecured claim. A Fixed Income Fund may obtain only a limited recovery or may obtain no recovery in such circumstances. Regulatory requirements may also limit the ability of a Fixed Income Fund to protect its interests in the event of an insolvency of a derivatives counterparty. In the event of a counterparty's (or its affiliate's) insolvency, a Fixed Income Fund's ability to exercise remedies, such as the termination of transactions, netting of obligations and realization on collateral, could be stayed or eliminated under special resolution regimes adopted in the United States, the European Union ("EU"), the United Kingdom ("UK") and various other jurisdictions. Such regimes provide government authorities with broad authority to intervene when a financial institution is experiencing financial difficulty. In particular, with respect to counterparties who are subject to such proceedings in the EU or the UK, the liabilities of such counterparties to a Fixed Income Fund could be reduced, eliminated, or converted to equity in such counterparties (sometimes referred to as a "bail in"). Subject to certain U.S. federal income tax limitations, the Fixed Income Funds are not subject to any limit with respect to the number or the value of transactions they can enter into with a single counterparty. To the extent that a Fixed Income Fund enters into multiple transactions with a single or a small number of counterparties, it will be subject to increased counterparty risk.

Qualified Financial Contracts. Regulations adopted by federal banking regulators under the Dodd-Frank Act require that certain qualified financial contracts (“**QFCs**”) with counterparties that are part of U.S. or foreign global systemically important banking organizations be amended to include contractual restrictions on close-out and cross-default rights. QFCs include, but are not limited to, securities contracts, commodities contracts, forward contracts, repurchase agreements, securities lending agreements and swaps agreements, as well as related master agreements, security agreements, credit enhancements, and reimbursement obligations. If a covered counterparty of a Fixed Income Fund or certain of the covered counterparty’s affiliates were to become subject to certain insolvency proceedings, the Fixed Income Fund may be temporarily, or in some cases permanently, unable to exercise certain default rights, and the QFC may be transferred to another entity. These requirements may impact a Fixed Income Fund’s credit and counterparty risks.

Clearing Broker and Central Clearing Counterparty Risk. Some derivative transactions (including futures contracts and certain interest rate and index credit default swaps) are required to be or are capable of being centrally cleared. In a transaction involving such cleared derivative transactions (“**cleared derivatives**”), a Fixed Income Fund’s counterparty is a clearing house, rather than a bank or broker. Since the Fixed Income Funds are not members of clearing houses and only members of a clearing house (“**clearing members**”) can participate directly in the clearing house, the Fixed Income Funds will hold cleared derivatives through accounts at clearing members. In cleared derivatives transactions, the Fixed Income Funds will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Entering into a cleared derivative transaction subjects a Fixed Income Fund to the credit risk of the clearing house and the clearing member through which it holds its cleared positions. Clearing members guarantee performance of their clients’ obligations to the clearing house.

There is a risk that assets deposited by a Fixed Income Fund with any clearing member as margin for futures contracts or cleared swaps may, in certain circumstances, be used to satisfy losses of other clients of the Fixed Income Fund’s clearing member. In addition, the assets of a Fixed Income Fund might not be fully protected in the event of the clearing member’s bankruptcy, as the Fixed Income Fund would be limited to recovering only a *pro rata* share of all available funds segregated on behalf of the clearing member’s customers for the relevant account class. Although a clearing member is required to segregate assets from customers with respect to cleared derivatives positions from the clearing member’s proprietary assets, if a clearing member does not comply with the applicable regulations, or in the event of fraud or misappropriation of customer assets by a clearing member, a Fixed Income Fund could have only an unsecured creditor claim in an insolvency of the clearing member with respect to the assets held by the clearing member. Similarly, all customer funds held by a clearing member and at a clearing organization in connection with cleared derivatives are generally held on a commingled omnibus basis and are not identified to the name of the clearing member’s individual customers. All customer funds held at a clearing organization with respect to cleared derivatives transactions of customers of a clearing member are also held by account class in an omnibus account, but with respect to cleared swaps, CFTC rules require that the clearing member notify the clearing organization of the amount of the initial margin provided by the clearing member to the clearing organization that is attributable to each customer. With respect to futures and options contracts, a clearing organization may use assets of a non-defaulting customer held in an omnibus account at the clearing organization to satisfy payment obligations of a defaulting customer of the clearing member to the clearing organization. With respect to cleared swaps, a clearing organization generally cannot do so, but may do so if the clearing member does not provide accurate reporting to the clearing organization as to the attribution of margin among its clients. Also, since clearing members generally provide to clearing organizations the net amount of variation margin required for cleared derivatives for all of their customers in the aggregate, rather than the gross amount of each customer, a Fixed Income Fund is subject to the risk that a clearing organization will not make variation margin payments owed to the Fixed Income Fund if another customer of the clearing member has suffered a loss and is in default. As a result, in the event of a default or the clearing member’s other clients or the clearing member’s failure to extend its own funds in connection with any such default, a Fixed Income Fund may not be able to recover the full amount of assets deposited by the clearing member on behalf of the Fixed Income Fund with the clearing organization. In addition, in the event of the bankruptcy or insolvency of a clearing member or clearing house, a Fixed Income Fund might experience a loss of funds deposited through its

clearing member as margin with the clearing house, a loss of unrealized profits on its open positions, and the loss of funds owed to it as realized profits on closed positions. Such a bankruptcy or insolvency might also cause a substantial delay before a Fixed Income Fund could obtain the return of funds owed to it by a clearing member who was a member of such clearing house. Credit risk of market participants with respect to cleared derivatives transactions is concentrated in a few clearing houses, and it is not clear how an insolvency proceeding of a clearing house would be conducted and what impact an insolvency of a clearing house would have on the financial system.

In some ways, cleared derivative arrangements can be less favorable to mutual funds than bilateral arrangements. For example, a Fixed Income Fund may be required to provide more margin for cleared derivatives positions than for bilateral derivatives positions. Also, in contrast to a bilateral derivatives position, following a period of notice to a Fixed Income Fund, a clearing member generally can require termination of an existing cleared derivatives position at any time or an increase in margin requirements above the margin that the clearing member required at the beginning of a transaction. Clearing houses also have broad rights to increase margin requirements for existing positions or to terminate those positions at any time. Any increase in margin requirements or termination of existing cleared derivatives positions by the clearing member or the clearing house could interfere with the ability of a Fixed Income Fund to pursue its investment strategy. Further, any increase in margin requirements by a clearing member could expose a Fixed Income Fund to greater credit risk to its clearing member because margin for cleared derivatives positions in excess of a clearing house's margin requirements may be held by the clearing member. Also, a Fixed Income Fund is subject to risk if it enters into a derivatives transaction that is required to be cleared (or that the Adviser expects to be cleared), and no clearing member is willing or able to clear the transaction on the Fixed Income Fund's behalf. In those cases, the position might have to be terminated, and the Fixed Income Fund could lose some or all of the benefit of the position, including loss of an increase in the value of the position and/or loss of hedging protection, or could realize a loss. In addition, the documentation governing the relationship between a Fixed Income Fund and clearing members is drafted by the clearing members and generally is less favorable to the Fixed Income Fund than typical bilateral derivatives documentation.

Some types of cleared derivatives are required to be executed on an exchange or on a swap execution facility. A swap execution facility is a trading platform where multiple market participants can execute derivatives by accepting bids and offers made by multiple other participants in the platform. While this execution requirement is designed to increase transparency and liquidity in the cleared derivatives market, trading on a swap execution facility can create additional costs and risks for a Fixed Income Fund. For example, swap execution facilities typically charge fees, and if a Fixed Income Fund executes derivatives on a swap execution facility through a broker intermediary, the intermediary may impose fees as well. Also, the Fixed Income Fund may be required to indemnify a swap execution facility, or a broker intermediary who executes cleared derivatives on a swap execution facility on the Fixed Income Fund's behalf, against any losses or costs that may be incurred as a result of the Fixed Income Fund's transactions on the swap execution facility.

These and other new rules and regulations could, among other things, restrict a Fixed Income Fund's ability to engage in, or increase the cost to the Fixed Income Fund of, derivatives transactions, for example, by making some types of derivatives no longer available to the Fixed Income Fund, increasing margin or capital requirements, or otherwise limiting liquidity or increasing transaction costs. The implementation of the clearing requirement has increased the costs of derivatives transactions for the Fixed Income Fund, since the Fixed Income Fund has to pay fees to its clearing members and is typically required to post more margin for cleared derivatives than it has historically posted for uncleared derivatives. These regulations are relatively new and evolving, so their ultimate impact on the Fixed Income Fund and the financial system are not yet known. While such regulations and central clearing of some derivatives transactions are designed to reduce systemic risk (*e.g.*, the risk that the interdependence of large derivatives dealers could cause them to suffer liquidity, solvency or other challenges simultaneously), there is no assurance that clearing mechanisms will achieve that result. While these systems are introduced into the market, as noted above, central clearing and related requirements expose the Fixed Income Fund to risks and costs, not all of which are known as these relatively new processes emerge and evolve.

Debt Securities Risks

Debt securities are subject to various risks. Debt securities are subject to, among others, two primary (but not exclusive) types of risk: credit risk and interest rate risk. These risks can affect a security's price volatility to varying degrees, depending upon the nature of the instrument. In addition, the depth and liquidity of the market for an individual or class of fixed income security can also affect its price and, hence, the market value of a Fixed Income Fund.

Credit risk: refers to the risk that an issuer, counterparty or other obligor to a Fixed Income Fund will fail to pay its obligations to the Fixed Income Fund when they are due. If an investment's issuer, counterparty or other obligor fails to pay interest or otherwise fails to meet its obligations to a Fixed Income Fund, the value of the investment might be lost entirely. Financial strength and solvency of an issuer are the primary factors influencing credit risk. Actual or perceived changes in the financial condition of an obligor, changes in specific economic, social or political conditions that affect a particular type of security, other instrument or an obligor, and changes in economic, social or political conditions generally can increase the risk of default by an obligor, which can affect a security's or other instrument's credit quality or value and an obligor's ability to honor its obligations when due. The values of lower-quality debt securities (including debt securities commonly known as "**high yield**" securities or "**junk bonds**"), including floating rate loans, tend to be particularly sensitive to these changes. The values of securities or instruments also may decline for a number of other reasons that relate directly to the obligor, such as management performance, financial leverage, reduced demand for the obligor's goods and services, as well as the historical and prospective earnings of the obligor and the value of its assets. Credit risk is heightened to the extent a Fixed Income Fund has fewer counterparties.

In addition, lack of or inadequacy of collateral or credit enhancements for a fixed income security may affect its credit risk. Credit risk of a security may change over time, and securities which are rated by rating agencies may be subject to downgrade, which may have an indirect impact on the market price of securities. Ratings are only opinions of the agencies issuing them as to the likelihood of repayment. They are not guarantees as to quality and they do not reflect market risk.

Extension risk: refers to the risk that if interest rates rise, repayments of principal on certain debt securities, including, but not limited to, floating rate loans and mortgage-related securities, may occur at a slower rate than expected and the expected maturity of those securities could lengthen as a result. Securities that are subject to extension risk generally have a greater potential for loss when prevailing interest rates rise, which could cause their values to fall sharply. Interest-only and principal-only securities are especially sensitive to interest rate changes, which can affect not only their prices but can also change the income flows and repayment assumptions about those investments.

Interest rate risk: refers to the risk that the values of debt instruments held by a Fixed Income Fund will change in response to changes in interest rates. Interest rate changes may affect the value of a fixed income instrument directly (especially in the case of fixed rate instruments) and indirectly (especially in the case of adjustable rate instruments). In general, the value of a fixed-income instrument with positive duration will generally decline if interest rates increase, whereas the value of an instrument with negative duration will generally decline if interest rates decrease. The value of an instrument with a longer duration (whether positive or negative) will be more sensitive to increases in interest rates than a similar instrument with a shorter duration. Duration is a measure of the expected life of a bond that is used to determine the sensitivity of an instrument's price to changes in interest rates. For example, the price of a bond fund with an average duration of three years generally would be expected to fall approximately 3% if interest rates rose by one percentage point. Inverse floaters, interest-only and principal-only securities are especially sensitive to interest rate changes, which can affect not only their prices but can also change the income flows and repayment assumptions about those investments. Adjustable rate instruments also react to interest rate changes in a similar manner although generally to a lesser degree (depending, however, on the characteristics of the reset terms, including the index chosen, frequency of reset and reset caps or floors, among other things). During periods of increasing interest rates, changes in the interest rate

payments of adjustable rate instruments may lag the changes in market interest rates or may have limits on the maximum increase in interest rates. Conversely, there may not be any limitations or caps on the adjustment down of interest rate payments during periods of declining market interest rates. Recently, there have been inflationary price movements, which have caused the fixed income securities markets to experience heightened levels of interest rate volatility and liquidity risk. The risks associated with rising interest rates are heightened under current market conditions given that the U.S. Federal Reserve has raised interest rates from historically low levels and may continue to do so. Further, in market environments where interest rates are rising, issuers may be less willing or able to make principal and interest payments on fixed-income investments when due.

The values of variable and floating rate debt securities are generally less sensitive to interest rate changes as compared to fixed rate debt instruments, but may decline in value if their interest rates do not rise as much, or as quickly, as interest rates in general. A floating rate debt security's interest rate depends on the characteristics of the reset terms, including the index chosen and the frequency of reset and any caps or floors, among other things. Conversely, floating rate securities will not generally increase in value at all or to the same extent as fixed rate instruments when interest rates decline. Inverse floating rate debt securities may decrease in value if interest rates increase. Inverse floating rate debt securities also may exhibit greater price volatility than a fixed rate debt obligation with similar credit quality. When a Fixed Income Fund holds variable or floating rate securities, a decrease (or, in the case of inverse floating rate securities, an increase) in market interest rates will adversely affect the income received from such securities and the Fixed Income Fund's NAV.

Prepayment/Reinvestment Risk: Many types of debt securities, including floating rate loans, mortgage-backed securities, and asset-backed securities, may reflect an interest in periodic payments made by borrowers. Although debt securities and other obligations typically mature after a specified period of time, borrowers may pay them off sooner. When a prepayment happens, all or a portion of the obligation will be prepaid. A borrower is more likely to prepay an obligation which bears a relatively high rate of interest. This means that in times of declining interest rates, there is a greater likelihood that the Fixed Income Fund's higher yielding securities will be pre-paid and the Fixed Income Fund will probably be unable to re-invest those proceeds in an investment with as great a yield, causing the Fixed Income Fund's yield to decline. Securities subject to prepayment risk generally offer less potential for gains when prevailing interest rates fall. If the Fixed Income Fund buys those investments at a premium, accelerated prepayments on those investments could cause the Fixed Income Fund to lose a portion of its principal investment and result in lower yields to shareholders. The increased likelihood of prepayment when interest rates decline also limits market price appreciation, especially with respect to certain loans, mortgage-backed securities and asset-backed securities. The effect of prepayments on the price of a security may be difficult to predict and may increase the security's price volatility. Interest-only and principal-only securities are especially sensitive to interest rate changes, which can affect not only their prices but can also change the income flows and repayment assumptions about those investments. Income from the Fixed Income Fund's portfolio may decline when the Fixed Income Fund invests the proceeds from investment income, sales of portfolio securities or matured, traded or called debt obligations. A decline in income received by a Fixed Income Fund from its investments is likely to have a negative effect on the dividend levels, NAV and/or overall return of the Fixed Income Fund.

Defaulted Securities

A Fixed Income Fund may invest in securities in default. Defaulted securities risk refers to the significant risk of the uncertainty of repayment of defaulted securities (*e.g.*, a security on which a principal or interest payment is not made when due) and obligations of distressed issuers (including insolvent issuers or issuers in payment or covenant default, in workout or restructuring or in bankruptcy or similar proceedings). Because the issuer of such securities is in default and is likely to be in distressed financial condition, repayment of defaulted securities and obligations of distressed issuers is subject to significant uncertainties. Insolvency laws and practices in foreign markets, and especially emerging market countries, are different than those in the U.S. and the effect of these laws and practices cannot be predicted with certainty. Investments in defaulted securities and obligations of distressed issuers are considered speculative and entail high risk.

Emerging Market Countries

Investing in securities of emerging market countries, as compared to foreign developed markets, involves substantial additional risk due to more limited information about the issuer and/or the security; higher brokerage costs; different accounting, auditing and financial reporting standards; less developed legal systems and thinner trading markets; the possibility of currency blockages or transfer restrictions; an emerging market country's dependence on revenue from particular commodities or international aid; and expropriation, nationalization or other adverse political or economic developments, such as the imposition of economic sanctions, tariffs or other governmental restrictions.

Political and economic structures in many emerging market countries may undergo significant evolution and rapid development, and such countries may lack the social, political and economic stability characteristics of more developed countries. Emerging market countries tend to have a greater degree of economic, political and social instability than the U.S. and other developed countries. Such social, political and economic instability could disrupt the financial markets in which a Fixed Income Fund invests and adversely affect the value of its investment portfolio. Some of these countries may have in the past failed to recognize private property rights and have at times nationalized or expropriated the assets of private companies. In addition, unanticipated political or social developments may affect the value of investments in emerging markets and the availability of additional investments in these markets. The small size, limited trading volume and relative inexperience of the securities markets in these countries may make investments in securities traded in emerging markets illiquid and more volatile than investments in securities traded in more developed countries, and a Fixed Income Fund may be required to establish special custodial or other arrangements before making investments in securities traded in emerging markets. There may be little financial or accounting information available with respect to issuers of emerging market securities, and it may be difficult as a result to assess the value or prospects of an investment in such securities.

The securities markets of emerging market countries may be substantially smaller, less developed, less liquid and more volatile than the major securities markets in the United States and other developed nations. The limited size of many securities markets in emerging market countries and limited trading volume in issuers compared to the volume in U.S. securities or securities of issuers in other developed countries could cause prices to be erratic for reasons other than factors that affect the quality of the securities and investments in emerging markets can become illiquid. For example, limited market size may cause prices to be unduly influenced by traders who control large positions. Adverse publicity and investors' perceptions, whether or not based on fundamental analysis, may decrease the value and liquidity of portfolio securities, especially in these markets. In addition, emerging market countries' exchanges' and broker-dealers may generally be subject to less regulation than their counterparts in developed countries. Emerging market securities markets, exchanges and market participants may lack the regulatory oversight and sophistication necessary to deter or detect market manipulation in such exchanges or markets, which may result in losses to a Fixed Income Fund to the extent it holds investments trading in such exchanges or markets. Brokerage commissions and dealer mark-ups, custodial expenses and other transaction costs are generally higher in emerging market countries than in developed countries. As a result, funds that invest in emerging market countries have operating expenses that are higher than funds investing in other securities markets.

The Public Company Accounting Oversight Board, which regulates auditors of U.S. public companies, is unable to inspect audit work papers in certain foreign countries. Investors in foreign countries often have limited rights and few practical remedies to pursue shareholder claims, including class actions or fraud claims, and the ability of the SEC, the U.S. Department of Justice and other authorities to bring and enforce actions against foreign issuers or foreign persons is limited.

Regulatory regimes outside of the U.S. may not require or enforce corporate governance standards comparable to that of the U.S., which may result in less protections for investors in such issuers and make such issuers more susceptible to actions not in the best interest of the issuer or its investors.

In certain emerging market countries governments participate to a significant degree, through ownership or regulation, in their respective economies. Action by these governments could have a significant adverse effect on market prices of securities and payment of dividends. In addition, most emerging market countries have experienced substantial, and in some periods extremely high, rates of inflation. Inflation and rapid fluctuation in inflation rates have had and may continue to have very negative effects on the economies and securities markets of certain emerging market countries.

The currencies of certain emerging market countries have sometimes experienced devaluations relative to the U.S. dollar, and future devaluations may adversely affect the value of assets denominated in such currencies. A devaluation of the currency in which portfolio securities are denominated will negatively impact the value of those securities. Many emerging market countries have experienced substantial, and in some periods extremely high, rates of inflation or deflation for many years, and future inflation may adversely affect the economies and securities markets of such countries. When debt and similar obligations issued by foreign issuers are denominated in a currency (*e.g.*, the U.S. dollar or the euro) other than the local currency of the issuer, the subsequent strengthening of the non-local currency against the local currency will generally increase the burden of repayment on the issuer and may increase significantly the risk of default by the issuer.

Emerging market countries have and may in the future impose capital controls, foreign currency controls and repatriation controls. In addition, some currency hedging techniques may be unavailable in emerging market countries, and the currencies of emerging market countries may experience greater volatility in exchange rates as compared to those of developed countries.

A Fixed Income Fund may invest in commodities or commodity-related investments that are found in or exported from emerging market countries or the values of which are affected significantly by economic or other conditions in emerging market countries.

Investments in emerging markets may be considered speculative.

To the extent a Fixed Income Fund invests in Chinese securities, its investments may be impacted by the economic, political, diplomatic, and social conditions within China, as well as by U.S. restrictions on investments located in China. For example, continued hostility and the potential for future political or economic disturbances between China and the United States may have an adverse impact on the values of investments in China, the United States, and/or other countries.

Furthermore, many Chinese companies have used complex organizational structures to address Chinese restrictions on foreign investment whereby foreign persons, through another entity domiciled outside of China (a “**non-Chinese affiliate**”), have limited contractual rights, including economic benefits, with respect to the Chinese company. Chinese regulators have permitted such arrangements to proliferate even though such arrangements are not formally recognized under Chinese law. If Chinese regulators’ tacit acceptance of these arrangements ceases, the value of such holdings would be negatively impacted. Moreover, since the legitimacy and enforceability of such arrangements are not recognized under Chinese law, remedies available to an investor through a non-Chinese affiliate would be limited. Furthermore, many Chinese companies have circumvented Chinese restrictions on foreign investments by using variable interest entities (“**VIEs**”), which enable foreign persons to contractually impose some control, albeit less than direct equity ownership, on such Chinese companies while accessing their economic benefits without formal ownership. While Chinese law does not formally recognize VIEs, Chinese regulators have permitted such arrangements to proliferate. Tacit acceptance of VIEs by Chinese regulators may cease in the future. Moreover, the legitimacy and enforceability of VIEs are not formally recognized under Chinese law, which may cause Chinese courts to not enforce the contracts related thereto, thus limiting the remedies and rights of investors, such as a Fixed Income Fund, who are invested in such company via a VIE. Future regulatory action may prohibit the ability of a VIE to receive the economic benefits of a Chinese company with which it has a contractual arrangement, which would cause the market value of such holding to lose substantial value. It remains unclear whether any new laws, rules, or regulations relating to VIE structures will be adopted or, if adopted, what impact they would have on the interests of foreign shareholders.

China Bond Connect Risk. Chinese debt instruments trade on the China Interbank Bond Market (“CIBM”) and may be purchased through a market access program that is designed to, among other things, enable foreign investment in the PRC (“**Bond Connect**”). There are significant risks inherent in investing in Chinese debt instruments, similar to the risks of investing in other fixed-income securities in emerging markets. The prices of debt instruments traded on the CIBM may fluctuate significantly due to low trading volume and potential lack of liquidity. The rules to access debt instruments that trade on the CIBM through Bond Connect are relatively new and subject to change, which may adversely affect a Fixed Income Fund’s ability to invest in these instruments and to enforce its rights as a beneficial owner of these instruments. Trading through Bond Connect is subject to a number of restrictions that may affect a Fixed Income Fund’s investments and returns. In addition, securities offered through Bond Connect may lose their eligibility for trading through the program at any time. If Bond Connect securities lose their eligibility for trading through the program, they may be sold but can no longer be purchased through Bond Connect. There can be no assurance as to the program’s continued existence or whether future developments regarding the program may restrict or adversely affect a Fixed Income Fund’s investments or returns.

Investments made through Bond Connect are subject to order, clearance and settlement procedures that are relatively untested in China, which could pose risks to a Fixed Income Fund. CIBM does not support all trading strategies (such as short selling) and investments in Chinese debt instruments that trade on the CIBM are subject to the risks of suspension of trading without cause or notice, trade failure or trade rejection and default of securities depositories and counterparties. Furthermore, Chinese debt instruments purchased via Bond Connect will be held via a book entry omnibus account in the name of the Hong Kong Monetary Authority Central Moneymarkets Unit (“**CMU**”) maintained with a China-based depository (either the China Central Depository & Clearing Co. (“**CCDC**”) or the Shanghai Clearing House (“**SCH**”). A Fixed Income Fund’s ownership interest in these Chinese debt instruments will not be reflected directly in book entry with CCDC or SCH and will instead only be reflected on the books of the Fixed Income Fund’s Hong Kong sub-custodian. Therefore, the Fixed Income Fund’s ability to enforce its rights as a bondholder may depend on CMU’s ability or willingness as record-holder of the bonds to enforce the Fixed Income Fund’s rights as a bondholder. Additionally, the omnibus manner in which Chinese debt instruments are held could expose a Fixed Income Fund to the credit risk of the relevant securities depositories and the Fixed Income Fund’s Hong Kong sub-custodian. While a Fixed Income Fund holds a beneficial interest in the instruments it acquires through Bond Connect, the mechanisms that beneficial owners may use to enforce their rights are untested. In addition, courts in China have limited experience in applying the concept of beneficial ownership. Moreover, Chinese debt instruments acquired through Bond Connect generally may not be sold, purchased or otherwise transferred other than through Bond Connect in accordance with applicable rules.

A Fixed Income Fund’s investments in Chinese debt instruments acquired through Bond Connect are generally subject to a number of regulations and restrictions, including Chinese securities regulations and listing rules, loss recovery limitations and disclosure of interest reporting obligations. A Fixed Income Fund will not benefit from access to Hong Kong investor compensation funds, which are set up to protect against defaults of trades, when investing through Bond Connect.

Bond Connect can only operate when both China and Hong Kong markets are open for trading and when banking services are available in both markets on the corresponding settlement days. In addition, the trading, settlement and IT systems required for non-Chinese investors in Bond Connect are relatively new. In the event of systems malfunctions or extreme market conditions, trading via Bond Connect could be disrupted. The rules applicable to taxation of Chinese debt instruments acquired through Bond Connect remain subject to further clarification. Uncertainties in the Chinese tax rules governing taxation of income and gains from investments via Bond Connect could result in unexpected tax liabilities for a Fixed Income Fund, which may negatively affect investment returns for shareholders. Bond Connect trades are settled in RMB, and investors must have timely access to a reliable supply of RMB in Hong Kong, which cannot be guaranteed.

China Stock Connect Risk. A Fixed Income Fund may, directly or indirectly (through, for example, participation notes or other types of equity-linked notes), purchase shares in mainland China-based companies that trade on Chinese stock exchanges such as the Shanghai Stock Exchange and the Shenzhen Stock Exchange (“**China A-Shares**”) through the Shanghai-Hong Kong Stock Connect program and Shenzhen-Hong Kong Stock Connect program (collectively, “**Stock Connect**”), or that may be available in the future through additional stock connect programs, a mutual market access program designed to, among other things, enable foreign investment in the People’s Republic of China (“**PRC**”) via brokers in Hong Kong. There are significant risks inherent in investing in China A-Shares through Stock Connect. The underdeveloped state of PRC’s investment and banking systems subjects the settlement, clearing, and registration of China A-Shares transactions to heightened risks. Stock Connect can only operate when both PRC and Hong Kong markets are open for trading and when banking services are available in both markets on the corresponding settlement days. As such, if either or both markets are closed on a U.S. trading day, a Fixed Income Fund may not be able to dispose of its China A-Shares in a timely manner, which could adversely affect the Fixed Income Fund’s performance. Because Stock Connect is relatively new, its effects on the market for trading China A-shares are uncertain. In addition, the trading, settlement and information technology (“**IT**”) systems required to operate Stock Connect are relatively new and continuing to evolve. In the event that the relevant systems do not function properly, trading through Stock Connect could be disrupted.

PRC regulations require that, in order to sell its China A-Shares, a Fixed Income Fund must pre-deliver the China A-Shares to a broker. If the China A-Shares are not in the broker’s possession before the market opens on the day of sale, the sell order will be rejected. This requirement could also limit the Fixed Income Fund’s ability to dispose of its China A-Shares purchased through Stock Connect in a timely manner. Additionally, Stock Connect is subject to daily quota limitations on purchases of China A-Shares. Once the daily quota is reached, orders to purchase additional China A-Shares through Stock Connect will be rejected. A Fixed Income Fund’s investment in China A-Shares may only be traded through Stock Connect and is not otherwise transferable. Stock Connect utilizes an omnibus clearing structure, and the Fixed Income Fund’s shares will be registered in its custodian’s name on the Central Clearing and Settlement System. This may limit the ability of the Adviser (and/or any subadviser, as the case may be) to effectively manage the Fixed Income Fund, and may expose the Fixed Income Fund to the credit risk of its custodian or to greater risk of expropriation. Investment in China A-Shares through Stock Connect may be available only through a single broker that is an affiliate of the Fixed Income Fund’s custodian, which may affect the quality of execution provided by such broker. Stock Connect restrictions could also limit the ability of a Fixed Income Fund to sell its China A-Shares in a timely manner, or to sell them at all. Further, different fees, costs and taxes are imposed on foreign investors acquiring China A-Shares acquired through Stock Connect, and these fees, costs and taxes may be higher than comparable fees, costs and taxes imposed on owners of other securities providing similar investment exposure.

Foreign Securities

Investment in foreign securities involves special risks in addition to the usual risks inherent in domestic investments. These include: political or economic instability; the unpredictability of international trade patterns; the possibility of foreign governmental actions such as expropriation, nationalization or confiscatory taxation; the imposition or modification of foreign currency or foreign investment controls; the imposition of withholding or other taxes on dividends, interest gains and proceeds; price volatility; and fluctuations in currency exchange rates. As compared to United States companies, foreign issuers generally disclose less financial and other information publicly and are subject to less stringent and less uniform accounting, auditing and financial reporting standards. In addition, there may be limited information generally regarding factors affecting a particular foreign market, issuer, or security. Foreign countries typically impose less thorough regulations on brokers, dealers, stock exchanges, corporate insiders and listed companies than does the United States, and foreign securities markets may be less liquid and more volatile than domestic markets. Investment in foreign securities involves higher costs than investment in U.S. securities, including higher transaction and custody costs as well as the imposition of additional taxes by foreign governments, and as a result investments in foreign securities may be subject to issues relating to security registration or settlement. In addition, security trading and

custody practices abroad may offer less protection to investors such as the Fixed Income Funds. Political, social or financial instability, civil unrest, geopolitical tensions, wars and acts of terrorism are other potential risks that could adversely affect an investment in a foreign security or in foreign markets or issuers generally. Settlement of transactions in some foreign markets may be delayed or may be less frequent than in the U.S., which could affect the liquidity of a Fixed Income Fund's portfolio. Custody practices and regulations abroad may offer less protection to investors, such as a Fixed Income Fund, and a Fixed Income Fund may be limited in its ability to enforce contractual rights or obligations. Also, it may be more difficult to obtain and enforce legal judgments against foreign corporate issuers than against domestic issuers and it may be impossible to obtain and enforce judgments against foreign governmental issues.

Inflation/Deflation Risk

Inflation risk is the risk that the value of assets or income from a Fixed Income Fund's investments will be worth less in the future as inflation decreases the value of payments at future dates. As inflation increases, the real value of a Fixed Income Fund's portfolio could decline. Inflation rates in the United States and elsewhere have remained elevated. There can be no assurance that this trend will not continue or that efforts to slow or reverse inflation will not harm the economy and asset values. Deflation risk is the risk that prices throughout the economy decline over time. Deflation may have an adverse effect on the creditworthiness of issuers and may make issuer default more likely, which may result in a decline in the value of a Fixed Income Fund's portfolio.

Inflation-Indexed Bond Risk

Inflation-indexed bonds are fixed income securities whose principal values are periodically adjusted according to a measure of inflation. If the index measuring inflation falls, the principal value of inflation-indexed bonds will be adjusted downward, and consequently the interest payable on these securities (calculated with respect to a smaller principal amount) will be reduced. Repayment of the original bond principal upon maturity (as adjusted for inflation) is guaranteed in the case of U.S. Treasury inflation-indexed bonds. For bonds that do not provide a similar guarantee, the adjusted principal value of the bond repaid at maturity may be less than the original principal. With regard to municipal inflation-indexed bonds and certain corporate inflation-indexed bonds, the inflation adjustment is reflected in the semi-annual coupon payment. As a result, the principal value of municipal inflation-indexed bonds and such corporate inflation-indexed bonds does not adjust according to the rate of inflation. The value of inflation-indexed bonds is expected to change in response to changes in real interest rates. Real interest rates are tied to the relationship between nominal interest rates and the rate of inflation. If nominal interest rates increase at a faster rate than inflation, real interest rates may rise, leading to a decrease in value of inflation-indexed bonds. Inflation-indexed bonds may cause a potential cash flow mismatch to investors, because an increase in the principal amount of an inflation-indexed bond will be treated as interest income currently subject to tax at ordinary income rates even though investors will not receive repayment of principal until maturity. If a Fixed Income Fund invests in such bonds, it will be required to distribute such interest income in order to qualify for treatment as a RIC and eliminate Fund-level tax, without a corresponding receipt of cash, and therefore may be required to dispose of portfolio securities at a time when it may not be advantageous to do so in order to make such distributions.

Infrastructure Sector Risk (Opportunistic Bond ETF and Commercial Real Estate ETF only)

The values of a Fund's infrastructure investments ("**Infrastructure Investments**") may be entirely dependent upon the successful development, construction, maintenance, renovation, enhancement or operation of infrastructure assets or infrastructure-related projects. In the case of debt instruments or loans issued to finance (or refinance) the ownership, development, construction, maintenance, renovation, enhancement, or operation of infrastructure assets, a Fund may be entirely dependent on revenues or profits earned in respect of the infrastructure asset or project to receive the repayment of any principal and interest owed to it. Accordingly, a Fund has significant exposure to adverse economic, regulatory, political, legal, demographic, environmental and other developments affecting the success of the infrastructure assets or projects in which it directly or indirectly invests.

Infrastructure Investments are subject to a variety of risk factors that may adversely affect their success including significant use of leverage, high financing or interest costs, costs associated with environmental and other regulations, the effects of economic slowdown and surplus capacity, increased competition from other providers of similar services, unfavorable demographic trends, obsolescence of the related service or product it provides, cost over-runs, developmental delays, uncertainties concerning the availability of fuel at reasonable prices, the effects of energy conservation policies, poor planning, unexpected maintenance capital expenditures, increased operating expenses, and other factors. Additionally, infrastructure-related projects may be subject to regulation by various governmental authorities, including with respect to the rates they can charge for their products or services, and can be significantly affected by government spending policies because infrastructure-related issuers may rely, to a significant extent, on U.S. and foreign government demand for their products and services.

Infrastructure Investments (and related infrastructure assets) may also be adversely affected by natural disasters, geopolitical tensions, wars, terrorism or other catastrophes, legal challenges due to environmental, operational or other issues, the imposition of special tariffs or changes in tax laws, changes in exchange rates or interest rates, changes in prices for competitive services, economic conditions, tax treatment, removal or diminution of governmental subsidies, additional regulation, governmental intervention, litigation, negative publicity and public perception and unfavorable events in the regions where assets are located (e.g., expropriation, nationalization, confiscation of assets and property or imposition of restrictions on foreign investments and repatriation of capital, military coups, social unrest, violence or labor unrest). There is also the risk that corruption may negatively affect infrastructure projects and other infrastructure assets, especially in emerging markets, resulting in, among other things, delays and cost overruns. Infrastructure projects may face competition from government-sponsored projects, which could decrease the revenues generated from the asset or the number of available investment opportunities for a Fund.

A significant portion of the revenues of certain infrastructure assets or projects may be from one customer or a relatively small number of customers, including governmental entities and utilities. Accordingly, the values of certain Infrastructure Investments may be highly sensitive to the loss of one or more of those customers, and the loss of any single client may result in the issuer's payment default.

A Fund may make investments in infrastructure assets or projects that have not yet completed the construction phases of their development and which are not yet generating cash or revenue. Unexpected delays in completion of the construction phase in relation to any such project, any "overrun" in the costs of construction or any construction or maintenance defect, may adversely affect the ability of the issuer of a Fund's investments to service its debts. Any resulting default may adversely affect the value of a Fund's investment.

A Fund may make investments from time to time in infrastructure loan assets which are held on existing lenders' books, which means that a default by the counterparty may expose the Fund to losses regardless of the performance of the underlying projects or loans. The market for infrastructure bonds and loans is emerging but also rapidly developing, which means there may be fewer investment opportunities than other fixed-income sectors. There also may be fewer market participants willing to purchase infrastructure-related investments compared to other debt markets. Infrastructure assets and related investment opportunities may be more prevalent in developing or emerging markets, where certain of the risks described above, including the risk of default, may be heightened. See "—Emerging Market Countries."

To the extent that there are environmental liabilities arising in the future in relation to any sites owned or used by an infrastructure company or project (including, for example, clean-up and remediation liabilities), a company may be required to contribute financially towards any such liabilities which in turn may increase its risk of defaulting and/or adversely affect the values of a Fund's investments.

Some infrastructure-related projects may utilize relatively new or developing technologies and there may be issues in relation to those technologies that become apparent only in the future. Such issues may give rise to additional costs for the relevant issuer or project or may otherwise result in the financial performance of the

infrastructure project being poorer than anticipated. This may adversely affect the values of a Fund's investments. Additionally, technological advances in the future may reduce the competitive efficiency of existing or commissioned infrastructure projects, services, or networks.

Infrastructure assets, including investments related to infrastructure projects and infrastructure-related companies, may be more susceptible to adverse economic or regulatory occurrences and other specific risks affecting their industries, which may adversely affect the development and success of the infrastructure companies and projects related to assets in which a Fund invests; delay or limit repayment of the principal and interest payments on a borrower's loans or other debt; adversely affect a Fund's rights in collateral relating to a loan or other investment; or otherwise adversely affect the value of a Fund's investments.

A Fund's ability to recover in respect of a defaulted bond or loan may be limited. Some infrastructure-related debt instruments may not be secured by any assets and may not be supported by other credit enhancements. Where recourse to a guarantor, or other third party, or other assets exists, recovery on a defaulted bond or loan may require a Fund to incur significant costs and delay and/or require participation in restructuring or bankruptcy proceedings. In certain jurisdictions, a Fund may have limited or no rights in respect of such proceedings. In the case of a defaulted bond or loan, a Fund may determine to sell its investment or claim at a price substantially below what it might receive if it participated in a restructuring or bankruptcy proceeding for a variety of reasons, including to avoid incurring significant costs, delay or uncertainty, or because of the potentially adverse consequences that may occur if a Fund takes possession of certain types of assets.

In addition to the risks described above, each of which may adversely affect the values of a Fund's investments, sector-specific risks may also adversely affect the values of a Fund's investments. A summary of some of the principal sector-specific risks is included below. The inclusion of a specific risk below with respect to a specific sector does not mean that that risk does not apply in respect of a Fund's other investments:

Transportation. Transportation-related infrastructure assets may be adversely affected by, among other things, economic and market changes, fuel prices, labor relations, geo-political concerns and insurance costs. Transportation-related infrastructure assets and related businesses may also be subject to significant government regulation and oversight, which may adversely affect their businesses.

Electric Utilities and Power. Deregulation may subject utility- and power-related infrastructure assets to greater competition and may adversely affect their performance. Assets in the utilities and/or power industries may have difficulty obtaining financing for large construction projects during periods of inflation or unsettled capital markets; face restrictions on operations and increased cost and delays attributable to environmental considerations and regulation; find that existing plants, equipment or products have been rendered obsolete by technological innovations; or be subject to increased costs because of the scarcity of certain fuels or the effects of man-made or natural disasters. Existing and future regulations or legislation may make it difficult for utility and power assets to operate profitably. Government regulators monitor and control utility and power revenues and costs, and therefore may limit utility-related profits. There is no assurance that regulatory authorities will grant rate increases in the future. Energy conservation and changes in climate or environmental policy may also have a significant adverse impact on the revenues and expenses of utility and power-related assets. Additionally, independent power producers may face other risks such as but not limited to (i) market risks, (ii) project risks, and (iii) structural risk.

Energy. Energy-related infrastructure assets may be highly cyclical and highly dependent on energy prices. The success of such assets can be strongly affected by one or more of the following: the levels and volatility of global energy prices, energy supply and demand, capital expenditures on exploration and production of energy sources, energy conservation efforts, exchange rates, interest rates, economic conditions, tax treatment, increased competition and technological advances. Infrastructure assets and projects in this sector may be subject to substantial government regulation and contractual fixed pricing, which may increase the cost of doing business and limit the revenue or earnings available to support the assets' financing. Energy-related projects face a

significant risk of liability from accidents resulting in injury or loss of life or property, pollution or other environmental problems, equipment malfunctions or mishandling of materials and a risk of loss from wars, terrorism, political strife, geopolitical tensions, and natural disasters. Assets involving pipelines are subject to certain risks, including pipeline and equipment leaks and ruptures, explosions, fires, unscheduled downtime, transportation interruptions, discharges or releases of toxic or hazardous gases and other environmental risks. Any such event could have serious consequences for the general population of the affected area. Energy-related projects can be significantly affected by the supply of, and demand for, specific products (e.g., oil and natural gas) and services, exploration and production spending, government subsidization, world events and general economic conditions. Energy-related assets may have relatively high levels of debt and may be more likely to have to restructure their debt if there are downturns in energy markets or the economy as a whole.

Renewable Energy. Governments may provide a range of incentives and subsidies for specific types of assets, especially for renewable energy assets. Changes in the application of government policy in relation to the incentives and subsidies that they provide may have a material impact upon the profitability or viability of renewable-energy related infrastructure-related assets.

The generation of power from renewable energy sources tends to be reliant upon relatively recent technological developments (or the application thereof), and therefore unforeseen technical deficiencies with installations may occur. Moreover, the reliance of any renewable energy project, or group of projects, on a variable resource (for example, ambient light in the case of solar power projects, wind speed in the case of wind power projects and waste in the case of waste-to-energy projects) may affect the profitability of a site or sites. In addition, in the event of a failure of a utility or other private company contracted to purchase power produced by an installation or expiration of such a contract, in which a Fund has invested, difficulties may arise in contracting with a replacement power purchaser.

Communication Networks and Equipment. The telecommunications market is characterized by increasing competition and regulation by various regulatory authorities. Infrastructure assets in the telecommunications sector may encounter distressed cash flows due to the need to commit substantial capital to meet increasing competition, particularly in developing new products and services using new technology. Technological innovations may make the products and services of certain assets obsolete. Telecommunication-related infrastructure assets may depend on franchises or licenses in order to provide services in a given location. Licensing and franchise rights in the telecommunications sector are limited, which may provide an advantage to certain participants. Limited availability of such rights, high barriers to market entry and increasing regulatory oversight, among other factors, has led to consolidation within the sector, which could lead to further regulation or other negative effects in the future. Various forms of cyber attack, the sophistication and lethality of which continues to evolve, threaten communication networks and could severely hamper any infrastructure project dependent upon communication networks and equipment.

Public and Social Infrastructure. Public and social infrastructure assets, such as hospitals, schools, government accommodations, and other public service facilities projects, may be subject to risks that include, but are not limited to, costs associated with governmental, environmental and other regulations, the effects of economic slowdowns, increased competition from other providers of such services, uncertainties concerning costs, adverse political developments, and the level of government spending on infrastructure projects.

Metals and Mining. Investments in metals and mining related infrastructure assets may be speculative and subject to greater price volatility than investments in other types of companies. The performance of assets in this sector is related to, among other things, worldwide metal prices, and extraction and production costs. Worldwide metal prices may fluctuate substantially over short periods of time. Metals and mining assets may also be subject to the effects of competitive pressures in the metals and mining industry.

Industrial. Industrial-related infrastructure assets may be adversely affected by supply and demand both for their specific product or service and for industrial sector products in general. Government regulation, world events,

exchange rates and economic conditions, technological developments and liabilities for environmental damage and general civil liabilities will likewise affect the performance of these assets and their ability to repay their debts. The industrials sector may also be adversely affected by changes or trends in commodity prices, which can be highly volatile.

A Fund's investments in Infrastructure Investments will expose it to the risks of investing in the global commodity markets and particular commodities, and the value of a Fund's shares may be adversely affected by changes in the values of commodity prices, which can be extremely volatile and difficult to value. The values of commodities may be affected by a wide range of factors, including changes in overall market movements, speculative activity of other investors, real or perceived inflationary trends, commodity index volatility, changes in interest rates or currency exchange rates, population growth and changing demographics, nationalization, expropriation, or other confiscation, economic or other sanctions, international regulatory, political, and economic developments (for example, regime changes and changes in economic activity levels), environmental issues or regulation, and developments affecting a particular sector, industry or commodity, such as drought, floods, or other weather conditions, trade embargoes, competition from substitute products, transportation bottlenecks or shortages, fluctuations in supply and demand, tariffs and international economic, political and regulatory developments.

Investing in Special Situations

Periodically, a Fixed Income Fund might use aggressive investment techniques. These might include seeking to benefit from what the Adviser perceives to be special situations, such as mergers, reorganizations, restructurings or other unusual events expected to affect a particular issuer. However, there is a risk that the change or event might not occur as expected by the Adviser, which could have a negative impact on the price of the issuer's securities. A Fixed Income Fund's investment might not produce the expected gains or could incur a loss.

Investment Company and Exchange-Traded Fund Risk

Investments in open-end and closed-end investment companies, and other pooled investment vehicles, including any ETFs or money market funds, involve substantially the same risks as investing directly in the instruments held by these entities. However, the total return from such investments will be reduced by the operating expenses and fees of the investment company or ETF. A Fund must pay its pro rata portion of an investment company's or ETF's fees and expenses. To the extent the Adviser determines to invest Fund assets in other investment companies, the Adviser will have an incentive to invest in other investment vehicles sponsored or advised by the Adviser or a related party of the Adviser or other investment products sponsored or managed by DoubleLine or its related parties over investment companies or products sponsored or managed by others and to maintain such investments once made due to its own financial interest in those products and other business considerations. For example, the Adviser or its related parties may receive fees based on the amount of assets invested in such other investment vehicles, which fees may be higher than the fees the Adviser receives for managing a Fund.

Investment by a Fund in those other vehicles may be beneficial in the management of those other vehicles, by helping to achieve economies of scale or enhancing cash flows. The Funds' Adviser has agreed to reduce its advisory fees to the extent of advisory fees paid to the Adviser or its related parties by other investment vehicles in respect of assets of a Fund invested in those vehicles. This agreement will reduce, but will not eliminate, the conflicts described above.

Any investment company or ETF in which a Fund invests may not achieve its investment objective or execute its investment strategy effectively, which may adversely affect the Fund's performance. Shares of a closed-end investment company or ETF may expose a Fund to risks associated with leverage and may trade at a premium or discount to the NAV of the closed-end fund's or the ETF's portfolio securities depending on a variety of factors, including market supply and demand. Money market mutual funds in which a Fund may invest are subject to Rule 2a-7 of the 1940 Act, and invest in a variety of short-term, high quality, dollar-denominated money market instruments. Money market funds are not designed to offer capital appreciation. In addition, certain money

market funds may impose a fee upon the sale of shares or may temporarily suspend the ability of investors to redeem shares if such a fund's liquidity falls below required minimums, which may adversely affect a Fund's returns or liquidity. The acquisition of shares of a Fund by registered investment companies, and the acquisition by a Fund of shares of registered investment companies, are subject to the restrictions of Section 12(d)(1) of the 1940 Act, except as may be permitted by exemptive rules under the 1940 Act, including Rule 12d1-4.

Loan Risk

Investments in loans are generally subject to the same risks as investments in other types of debt obligations, including, among others, credit risk, interest rate risk, prepayment risk, and extension risk. In addition, in many cases loans are subject to the risks associated with below-investment grade securities. This means loans are often subject to significant credit risks, including a greater possibility that the borrower will be adversely affected by changes in market or economic conditions and may default or enter bankruptcy. This risk of default will increase in the event of an economic downturn or a substantial increase in interest rates (which will increase the cost of the borrower's debt service). The risks of investing in loans include the risk that the borrowers on loans held by a Fixed Income Fund may be unable to honor their payment obligations due to adverse conditions in the industry or industries in which they operate.

The interest rates on floating rate loans typically adjust only periodically. Accordingly, adjustments in the interest rate payable under a loan may trail prevailing interest rates significantly, especially if there are limitations placed on the amount the interest rate on a loan may adjust in a given period. Certain floating rate loans have a feature that prevents their interest rates from adjusting if market interest rates are below a specified minimum level. When interest rates are low, this feature could result in the interest rates of those loans becoming fixed at the applicable minimum level until interest rates rise above that level. Although this feature is intended to result in these loans yielding more than they otherwise would when interest rates are low, the feature might also result in the prices of these loans becoming more sensitive to changes in interest rates should interest rates rise but remain below the applicable minimum level.

In addition, investments in loans may be difficult to value and may be illiquid. Floating rate loans generally are subject to legal or contractual restrictions on resale. The liquidity of floating rate loans, including the volume and frequency of secondary market trading in such loans, varies significantly over time and among individual floating rate loans. For example, if the credit quality of the borrower related to a floating rate loan unexpectedly declines significantly, secondary market trading in that floating rate loan can also decline. The secondary market for loans may be subject to irregular trading activity, wide bid/ask spreads, and extended trade settlement periods, which may increase the expenses of a Fixed Income Fund or cause the Fixed Income Fund to be unable to realize the full value of its investment in the loan, resulting in a material decline in the Fixed Income Fund's NAV.

During periods of severe market stress, it is possible that the market for loans may become highly illiquid. In such an event, a Fixed Income Fund may find it difficult to sell loans it holds, and, for loans it is able to sell in such circumstances, the trade settlement period may be longer than anticipated.

Investments in loans through a purchase of a loan, loan origination or a direct assignment of a financial institution's interests with respect to a loan may involve additional risks to a Fixed Income Fund. For example, if a loan is foreclosed, a Fixed Income Fund could become owner, in whole or in part, of any collateral, which could include, among other assets, real estate or other real or personal property, and would bear the costs and liabilities associated with owning and holding or disposing of the collateral. In addition, it is conceivable that under emerging legal theories of lender liability, the Fixed Income Fund as holder of a partial interest in a loan could be held liable as co-lender for acts of the agent lender.

Loans and certain other forms of direct indebtedness may not be classified as "securities" under the federal securities laws and, therefore, when a Fixed Income Fund purchases such instruments, it may not be entitled to the protections against fraud and misrepresentation contained in the federal securities laws. In addition, a limited

number of states require purchasers of certain loans, primarily consumer loans, to be licensed or registered in order to own the loans or, in certain states, to collect a rate of interest above a specified rate. As of the date of this SAI, each Fixed Income Fund does not hold any such license or registration in any states where a license or registration is required, and there can be no assurance that any Fixed Income Fund will timely or ever obtain any such licenses or registration.

During periods of deteriorating economic conditions, such as recessions or periods of rising unemployment, delinquencies and losses generally increase, sometimes dramatically, with respect to loans.

Additional risks of investments in loans may include:

Agent/Intermediary Risk. If a Fixed Income Fund holds a loan through another financial intermediary, as is the case with a participation, or relies on another financial intermediary to administer the loan, as is the case with most multi-lender facilities, the Fixed Income Fund's receipt of principal and interest on the loan and the value of the Fixed Income Fund's loan investment will depend at least in part on the credit standing of the financial intermediary and therefore will be subject to the credit risk of the intermediary. The Fixed Income Fund will be required to rely upon the financial intermediary from which it purchases a participation interest to collect and pass on to the Fixed Income Fund such payments and to enforce the Fixed Income Fund's rights and may not be able to cause the financial intermediary to take what it considers to be appropriate action. As a result, an insolvency, bankruptcy or reorganization of the financial intermediary may delay or prevent the Fixed Income Fund from receiving principal interest and other amounts with respect to the Fixed Income Fund's interest in the loan. In addition, if a Fixed Income Fund relies on a financial intermediary to administer a loan, the Fixed Income Fund is subject to the risk that the financial intermediary may be unwilling or unable to demand and receive payments from the borrower in respect of the loan, or otherwise unwilling or unable to perform its administrative obligations.

Collateral Impairment Risk. Even if a loan to which a Fixed Income Fund is exposed is secured, there can be no assurance that the collateral will, when recovered and liquidated, generate sufficient (or any) funds to offset any losses associated with a defaulting loan. This risk is increased if the Fixed Income Fund's loans are secured by a single asset. In addition, a Fixed Income Fund's interest in collateral securing a loan may be found invalid or may be used to pay other outstanding obligations of the borrower under applicable law. In the event that a borrower defaults, a Fixed Income Fund's access to the collateral may be limited by bankruptcy and other insolvency laws. There is also the risk that the collateral may be difficult to liquidate, that all or some of the collateral may be illiquid or that a Fixed Income Fund's rights to collateral may be limited by bankruptcy or insolvency laws. A Fixed Income Fund may have to participate in legal proceedings or take possession of and manage assets that secure the issuer's obligations. This could increase a Fixed Income Fund's operating expenses and decrease its NAV.

Equity Securities and Warrants Risk. The acquisition of equity securities may generally be incidental to a Fixed Income Fund's purchase of a loan. A Fixed Income Fund may acquire equity securities as part of an instrument combining a loan and equity securities of a borrower or its affiliates. A Fixed Income Fund also may acquire equity securities issued in exchange for a loan or in connection with the default and/or restructuring of a loan, including subordinated and unsecured loans, and high yield securities. Equity securities include common stocks, preferred stocks and securities convertible into common stock. Equity securities are subject to market risks and the risks of changes to the financial condition of the issuer, and fluctuations in value.

Highly Leveraged Transactions Risk. A Fixed Income Fund may invest in loans or debt instruments made in connection with highly leveraged transactions. These transactions may include operating loans, leveraged buyout loans, leveraged capitalization loans and other types of acquisition financing. Those loans are subject to greater credit and liquidity risks than other types of loans and are generally considered speculative. If a Fixed Income Fund voluntarily or involuntarily sold those types of loans, it might not receive the full value it expected.

Stressed, Distressed or Defaulted Borrowers Risk. A Fixed Income Fund can also invest in loans of borrowers that are experiencing, or are likely to experience, financial difficulty. These loans are subject to greater credit and liquidity risks than other types of loans and are generally considered speculative. In addition, a Fixed Income Fund can invest in loans of borrowers that have filed for bankruptcy protection or that have had involuntary bankruptcy petitions filed against them by creditors. Various laws enacted for the protection of debtors may apply to loans.

A bankruptcy proceeding or other court proceeding could delay or limit the ability of a Fixed Income Fund to collect the principal and interest payments on that borrower's loans or adversely affect the Fixed Income Fund's rights in collateral relating to a loan.

The Fixed Income Funds have authorized the Adviser to act on their behalf in pursuing the Fixed Income Funds' rights in certain bankruptcy, restructuring or other "workout proceedings," including proceedings that may occur outside of the United States, and the Adviser may designate a third party to represent the Fixed Income Funds' interests in such proceedings. The risks associated with participation in such workout proceedings, and of investing in distressed investments generally, may be more pronounced in foreign jurisdictions in which the laws governing such proceedings, and the formality of such proceedings, may differ significantly from equivalent proceedings in the United States. If the Adviser's assessment of the eventual recovery value of a distressed security proves incorrect or if the actions taken by the Adviser or its designee prove unsuccessful, a Fixed Income Fund may be required to accept cash or instruments worth less than originally anticipated. In addition, events, including unexpected or unforeseeable events, may occur during the workout proceedings with respect to the borrower (for example, corruption relating to the borrower or a related party or government action that might affect the proceeding) and may also adversely affect the value of the Fixed Income Fund's investment. A Fixed Income Fund could potentially lose more than its original investment to the extent, for example, the terms of the arrangements provide for the Fixed Income Fund to indemnify its agents or other third parties for losses they incur in connection with their representation of the Fixed Income Fund in a workout proceeding.

If a lawsuit is brought by creditors of a borrower under a loan, a court or a trustee in bankruptcy could take certain actions that would be adverse to a Fixed Income Fund. For example:

- Other creditors might convince the court to set aside a loan or the collateralization of the loan as a "fraudulent conveyance" or "preferential transfer." In that event, the court could recover from the Fixed Income Fund the interest and principal payments that the borrower made before becoming insolvent. There can be no assurance that the Fixed Income Fund would be able to prevent that recapture.
- A bankruptcy (or other) court may restructure the payment obligations under the loan so as to reduce the amount to which the Fixed Income Fund would be entitled.
- The court might discharge the amount of the loan that exceeds the value of the collateral.
- The court may award (or a creditor group may negotiate to receive) securities or other forms of compensation that vary as to terms, seniority, and structure from that of the original debt investment purchase by a Fixed Income Fund.
- The court could subordinate the Fixed Income Fund's rights to the rights of other creditors of the borrower under applicable law, decreasing, potentially significantly, the likelihood of any recovery on the Fixed Income Fund's investment.

Limited Information Risk. Because there is limited public information available regarding loan investments, a Fixed Income Fund's investments in such instruments are particularly dependent on the analytical abilities of the Fixed Income Fund's portfolio managers.

Interest Rate Benchmarks Risk. Interest rates on loans typically adjust periodically, often based on changes in a benchmark rate plus a premium or spread over the benchmark rate. The benchmark rate may be the secured overnight financing rate, the Prime Rate, or other base lending rates used by commercial lenders (each as defined in the applicable loan agreement).

Some benchmark rates may reset daily; others reset less frequently. Certain floating or variable rate loans may permit the borrower to select an interest rate reset period of up to one year or longer. Investing in loans with longer interest rate reset periods may increase fluctuations in a Fixed Income Fund's NAV as a result of changes in interest rates. Interest rates on loans with longer periods between benchmark resets will typically trail market interest rates in a rising interest rate environment.

Certain loans may permit the borrower to change the base lending or benchmark rate during the term of the loan. One benchmark rate may not adjust to changing market or interest rates to the same degree or as rapidly as another, permitting the borrower the option to select the benchmark rate that is most advantageous to it and less advantageous to the Fixed Income Fund. To the extent the borrower elects this option, the interest income and total return the Fixed Income Fund earns on the investment may be adversely affected as compared to other investments where the borrower does not have the option to change the base lending or benchmark rate.

Restrictive Loan Covenants Risk. Borrowers must comply with various restrictive covenants that may be contained in loan agreements. They may include restrictions on dividend payments and other distributions to stockholders, provisions requiring the borrower to maintain specific financial ratios, and limits on total debt. They may include requirements that the borrower prepay the loan with any free cash flow. A break of a covenant that is not waived by the agent bank (or the lenders) is normally an event of default that provides the agent bank or the lenders the right to call the outstanding amount on the loan. If a lender accelerates the repayment of a loan because of the borrower's violation of a restrictive covenant under the loan agreement, the borrower might default in payment of the loan.

Some of the loans in which a Fixed Income Fund may invest or to which the Fixed Income Fund may obtain exposure may be "covenant-lite." Such loans contain fewer or less restrictive constraints on the borrower than certain other types of loans. Such loans generally do not include terms which allow the lender to monitor the performance of the borrower and declare a default or force a borrower into bankruptcy restructuring if certain criteria are breached. Under such loans, lenders may have to rely on covenants that restrict a borrower from incurring additional debt or engaging in certain actions. Such covenants can be breached only by an affirmative action of the borrower, rather than by a deterioration in the borrower's financial condition. Accordingly, a Fixed Income Fund may have fewer rights against a borrower when it invests in or has exposure to such loans and so may have a greater risk of loss on such investments as compared to investments in or exposure to loans with additional or more conventional covenants.

Senior Loan and Subordination Risk. In addition to the risks typically associated with debt securities and loans generally, Senior Loans are also subject to the risk that a court could subordinate a Senior Loan, which typically holds a senior position in the capital structure of a borrower, to presently existing or future indebtedness or take other action detrimental to the holders of Senior Loans.

A Fixed Income Fund's investments in Senior Loans may be collateralized with one or more of (1) working capital assets, such as accounts receivable and inventory, (2) tangible fixed assets, such as real property, buildings and equipment, (3) intangible assets such as trademarks or patents, or (4) security interests in shares of stock of the borrower or its subsidiaries or affiliates. In the case of loans to a non-public company, the company's shareholders or owners may provide collateral in the form of secured guarantees and/or security interests in assets they own. However, the value of the collateral may decline after the Fixed Income Fund buys the Senior Loan, particularly if the collateral consists of equity securities of the borrower or its affiliates. If a borrower defaults, insolvency laws may limit the Fixed Income Fund's access to the collateral, or the lenders may be unable to liquidate the collateral. A bankruptcy court might find that the collateral securing the Senior Loan is

invalid or require the borrower to use the collateral to pay other outstanding obligations. If the collateral consists of stock of the borrower or its subsidiaries, the stock may lose all of its value in the event of a bankruptcy, which would leave the Fixed Income Fund exposed to greater potential loss. As a result, a collateralized Senior Loan may not be fully collateralized and can decline significantly in value.

If a borrower defaults on a collateralized Senior Loan, a Fixed Income Fund may receive assets other than cash or securities in full or partial satisfaction of the borrower's obligation under the Senior Loan. Those assets may be illiquid, and a Fixed Income Fund might not be able to realize the benefit of the assets for legal, practical or other reasons. A Fixed Income Fund might hold those assets until the Adviser determined it was appropriate to dispose of them. If the collateral becomes illiquid or loses some or all of its value, the collateral may not be sufficient to protect a Fixed Income Fund in the event of a default of scheduled interest or principal payments.

A Fixed Income Fund can invest in Senior Loans that are not secured. If the borrower is unable to pay interest or defaults in the payment of principal, there will be no collateral on which the Fixed Income Fund can foreclose. Therefore, these loans typically present greater risks than collateralized Senior Loans.

Due to restrictions on transfers in loan agreements and the nature of the private syndication of Senior Loans including, for example, the lack of publicly-available information, some Senior Loans are not as easily purchased or sold as publicly-traded securities. Some Senior Loans and other Fixed Income Fund investments are illiquid, which may make it difficult for the Fixed Income Fund to value them or dispose of them at an acceptable price. Direct investments in Senior Loans and investments in participation interests in or assignments of Senior Loans may be limited.

Settlement Risk. Transactions in many loans settle on a delayed basis, and a Fixed Income Fund may not receive the proceeds from the sale of such loans for a substantial period after the sale. As a result, sale proceeds related to the sale of such loans may not be available to make additional investments or to meet the Fixed Income Fund's redemption obligations until potentially a substantial period after the sale of the loans.

Servicer Risk. A Fixed Income Fund's direct and indirect investments in loans are typically serviced by the originating lender or a third-party servicer. In the event that the servicer is unable to service the loan, there can be no guarantee that a backup servicer will be able to assume responsibility for servicing the loans in a timely or cost-effective manner; any resulting disruption or delay could jeopardize payments due to a Fixed Income Fund in respect of its investments or increase the costs associated with the Fixed Income Fund's investments.

Foreign Loan Risk. Loans involving foreign borrowers may involve risks not ordinarily associated with exposure to loans to U.S. entities and individuals. The foreign lending industry may be subject to less governmental supervision and regulation than exists in the U.S.; conversely, foreign regulatory regimes applicable to the lending industry may be more complex and more restrictive than those in the U.S., resulting in higher costs associated with such investments, and such regulatory regimes may be subject to interpretation or change without prior notice to investors, such as a Fixed Income Fund. Foreign lending may not be subject to accounting, auditing, and financial reporting standards and practices comparable to those in the U.S. Due to differences in legal systems, there may be difficulty in obtaining or enforcing a court judgment outside the U.S.

Lender Liability. A number of judicial decisions have upheld judgments of borrowers against lending institutions on the basis of various evolving legal theories, collectively termed "**lender liability**." Generally, lender liability is founded on the premise that a lender has violated a duty (whether implied or contractual) of good faith, commercial reasonableness and fair dealing, or a similar duty owed to the borrower or has assumed an excessive degree of control over the borrower resulting in the creation of a fiduciary duty owed to the borrower or its other creditors or shareholders. If a loan held by a Fixed Income Fund were found to have been made or serviced under circumstances that give rise to lender liability, the borrower's obligation to repay that loan could be reduced or eliminated or the Fixed Income Fund's recovery on that loan could be otherwise impaired, which would adversely impact the value of that loan. In limited cases, courts have subordinated the loans of a senior lender to

a borrower to claims of other creditors of the borrower when the senior lender or its agents, such as a loan servicer, is found to have engaged in unfair, inequitable or fraudulent conduct with respect to the other creditors. If a loan held by a Fixed Income Fund were subject to such subordination, it would be junior in right of payment to other indebtedness of the borrower, which could adversely impact the value of that loan.

Debtor-In-Possession Loan Risks. Obligations issued in connection with restructuring proceedings under the U.S. Bankruptcy Code or similar proceedings in other jurisdictions (“**DIP financings**”) are subject to additional risks. DIP financings are arranged when an entity seeks the protections of the bankruptcy court under Chapter 11 of the U.S. Bankruptcy Code and any DIP financing must be approved by the bankruptcy court. These financings are typically senior obligations of a borrower issued in connection with a restructuring that are designed to allow the entity to continue its business operations while reorganizing under Chapter 11. In DIP financings, the borrower potentially assumes large amounts of debt in order to have the financial resources to attempt to achieve its restructuring objectives. DIP financings are often fully secured by a lien on the debtor’s otherwise unencumbered assets but may also have senior or equal priority to other senior lenders or be secured by a junior lien on the debtor’s encumbered assets (so long as requirements as to collateralization of the loan and other legal requirements are satisfied). DIP financings are often required to close in a rapid manner in order to satisfy existing creditors. In any DIP financing, there is a risk that the borrower will not emerge successfully from Chapter 11 bankruptcy proceedings and be forced to liquidate its assets under Chapter 7 of the U.S. Bankruptcy Code. In the event of liquidation, the Fixed Income Fund’s only recourse will be against the property securing the DIP financing and any remaining unencumbered assets. DIP financings may be subject to some of the risks described under “Highly Leveraged Transactions” above.

Lower Rated Securities Risk

Unless prohibited by its Prospectus, each Fixed Income Fund may invest in fixed income instruments that are at the time of investment rated BB+ or lower by S&P or Ba1 or lower by Moody’s or the equivalent by any other NRSRO or that are at the time of investment unrated instruments determined by the Adviser to be of comparable quality. Corporate bonds and certain other fixed income instruments (for purposes of this discussion, all such instruments are herein referred to as “**securities**”) rated below investment grade, or such instruments that are unrated and are determined by the Adviser to be of comparable quality, are high yield, high risk bonds, commonly known as junk bonds.

Generally, lower-rated debt securities provide a higher yield than higher rated debt securities of similar maturity but are subject to greater risk of loss of principal and interest than higher rated securities of similar maturity. They are generally considered to be subject to greater risk than securities with higher ratings particularly in the event of a deterioration of general economic conditions. The lower ratings of the high yield securities which the Fixed Income Fund will purchase reflect a greater possibility that the financial condition of the issuers, or adverse changes in general economic conditions, or both, may impair the ability of the issuers to make payments of principal and interest. The market value of a single lower-rated debt security may fluctuate more than the market value of higher rated securities, since changes in the creditworthiness of lower rated issuers and in market perceptions of the issuers’ creditworthiness tend to occur more frequently and in a more pronounced manner than in the case of higher rated issuers. High yield debt securities also tend to reflect individual corporate developments to a greater extent than higher rated securities. The securities in which a Fixed Income Fund may invest are frequently subordinated to senior indebtedness.

The economy and interest rates affect high yield securities differently from other securities. The prices of high yield bonds have been found to be less sensitive to interest rate changes than higher-rated investments, but more sensitive to adverse economic changes or individual corporate developments. During an economic downturn or substantial period of rising interest rates, highly leveraged issuers may experience financial stress which would adversely affect their ability to service their principal and interest payment obligations, to meet projected business goals, and to obtain additional financing. If the issuer of a bond owned by a Fixed Income Fund defaults, the Fixed Income Fund may incur additional expenses to seek recovery. In addition, periods of

economic uncertainty and changes can be expected to result in increased volatility of market prices of high yield bonds and a Fixed Income Fund's asset value. Furthermore, the market prices of high yield bonds structured as zero coupon or pay-in-kind securities are affected to a greater extent by interest rate changes and thereby tend to be more volatile than securities which pay interest periodically and in cash.

To the extent there is a limited retail secondary market for particular high yield bonds, these bonds may be thinly-traded and the Adviser's ability to accurately value high yield bonds and a Fixed Income Fund's assets may be more difficult because there is less reliable, objective data available. In addition, a Fixed Income Fund's ability to acquire or dispose of the bonds may be negatively-impacted. Adverse publicity and investor perceptions, whether or not based on fundamental analysis, may decrease the values and liquidity of high yield bonds, especially in a thinly-traded market. To the extent a Fixed Income Fund owns or may acquire illiquid or restricted high yield bonds, these securities may involve special registration responsibilities, liabilities and costs, and liquidity and valuation difficulties.

Analysis of creditworthiness of issuers of high yield securities may be more complex than for issuers of higher-quality fixed income securities. To the extent that a Fixed Income Fund invests in high yield securities, the Fixed Income Fund's success in achieving its investment objective may depend more heavily on the Adviser's creditworthiness analysis than if the Fixed Income Fund invested exclusively in higher-quality securities.

High yield securities include (a) securities issued without an investment grade rating and (b) securities whose credit ratings have been downgraded below investment grade because of declining investment fundamentals. The first category includes securities issued by emerging credit companies and companies which have experienced a leveraged buyout or recapitalization. Although the small and medium size companies that constitute emerging credit issuers typically have significant operating histories, these companies generally do not have strong enough operating results to secure investment grade ratings from the rating agencies. In addition, at times there has been a substantial volume of high yield securities issued by companies that have converted from public to private ownership through leveraged buyout transactions and by companies that have restructured their balance sheets through leveraged recapitalizations. High yield securities issued in these situations are used primarily to pay existing stockholders for their shares or to finance special dividend distributions to shareholders. The indebtedness incurred in connection with these transactions is often substantial and, as a result, often produces highly leveraged capital structures which present special risks for the holders of such securities. Also, the market price of such securities may be more volatile to the extent that expected benefits from the restructuring do not materialize. The second category of high yield securities consists of securities of former investment grade companies that have experienced poor operating performance due to such factors as cyclical downtrends in their industry, poor management or increased foreign competition.

Special tax considerations are associated with investing in lower rated debt securities structured as zero coupon or pay-in-kind securities. The Fixed Income Funds accrue income on these securities prior to the receipt of cash payments. The Fixed Income Funds must distribute substantially all of their income to shareholders to qualify for the favorable tax treatment afforded RICs and their shareholders under the Code and may, therefore, have to dispose of portfolio securities to satisfy distribution requirements.

Underwriting and dealer spreads associated with the purchase of lower rated bonds are typically higher than those associated with the purchase of high grade bonds.

Mortgage-Backed Securities Risks

Mortgage-backed securities include, among other things, participation interests in pools of residential mortgage loans purchased from individual lenders by a federal agency or originated and issued by private lenders and involve, among others, the following risks:

Credit and Market Risks of Mortgage-Backed Securities. Investments by a Fixed Income Fund in fixed rate and floating rate mortgage-backed securities will entail credit risks (*i.e.*, the risk of non-payment of interest and

principal) and market risks (*i.e.*, the risk that interest rates and other factors could cause the value of the instrument to decline). Many issuers or servicers of mortgage-backed securities guarantee timely payment of interest and principal on the securities, whether or not payments are made when due on the underlying mortgages. This kind of guarantee generally increases the quality of a security, but does not mean that the security's market value and yield will not change. The values of mortgage-backed securities may change because of changes in the market's perception of the credit quality of the assets held by the issuer of the mortgage-backed securities or an entity, if any, providing credit support in respect of the mortgage-backed securities. In addition, an unexpectedly high rate of defaults on the mortgages held by a mortgage pool may limit substantially the pool's ability to make payments of principal or interest to the Fixed Income Fund as a holder of such securities, reducing the values of those securities or in some cases rendering them worthless. The Fixed Income Fund also may purchase securities that are not guaranteed or subject to any credit support, or that are subordinate in their right to receive payment of interest and repayment of principal to other classes of the issuer's securities. An investment in a privately issued mortgage-backed security is generally less liquid and subject to greater credit risks than an investment in a mortgage-backed security that is issued or otherwise guaranteed by a federal government agency or sponsored corporation.

Mortgage-backed securities may be structured similarly to CDOs and may be subject to similar risks. See “—Collateralized Debt Obligations Risk” in the Prospectus and SAI for more information. For example, the cash flows from the collateral underlying the mortgage-backed security may be split into two or more portions, called tranches, varying in risk and yield. Senior tranches are paid from the cash flows from the underlying assets before the junior tranches and equity or “first loss” tranches. Losses are first borne by the equity tranches, next by the junior tranches, and finally by the senior tranches. Interest holders in senior tranches are entitled to the lowest interest rates but are generally subject to less credit risk than more junior tranches because, should there be any default, senior tranches are typically paid first. The most junior tranches, such as equity tranches, typically are due to be paid the highest interest rates but suffer the highest risk of loss should the holder of an underlying mortgage loan default. If some loans default and the cash collected by the issuer of the mortgage-backed security is insufficient to pay all of its investors, those in the lowest, most junior tranches suffer losses first.

Like bond investments, the value of fixed rate mortgage-backed securities will tend to rise when interest rates fall, and fall when rates rise. Floating rate mortgage-backed securities generally tend to have more moderate changes in price when interest rates rise or fall, but their current yield will generally be affected. In addition, the mortgage-backed securities market in general may be adversely affected by changes in governmental legislation or regulation. Factors that could affect the value of a mortgage-backed security include, among other things, the types and amounts of insurance, if any, which an individual mortgage or that specific mortgage-backed security carries, the default and delinquency rate of the mortgage pool, the amount of time the mortgage loan has been outstanding, the loan-to-value ratio of each mortgage and the amount of overcollateralization or undercollateralization of a mortgage pool. A Fixed Income Fund may invest in mortgage-backed securities that are subordinate in their right to receive payment of interest and repayment of principal to other classes of the issuer's securities.

The residential mortgage market in the United States has experienced difficulties at times, and the same or similar events may adversely affect the performance and market value of certain of the Fixed Income Fund's mortgage-related investments. Delinquencies and losses on residential mortgage loans (especially subprime and second-lien mortgage loans) generally increase in a recession and potentially could begin to increase again. A decline in or flattening of housing values (as has been experienced and may again be experienced in many housing markets) may exacerbate such delinquencies and losses. Borrowers with adjustable rate mortgage loans may be more sensitive to changes in interest rates, which affect their monthly mortgage payments, and may be unable to secure replacement mortgages at comparably low interest rates. Also, a number of residential mortgage loan originators have experienced serious financial difficulties or bankruptcy. Reduced investor demand for mortgage-related securities has resulted and again may result in limited new issuances of mortgage-related securities and limited liquidity in the secondary market for mortgage-related securities, which can adversely

affect the market value of mortgage-related securities and limit the availability of attractive investment opportunities for a Fixed Income Fund. It is possible that such limited liquidity in secondary markets could return and worsen.

Ongoing developments in the residential and commercial mortgage markets may have additional consequences for the market for mortgage-backed securities. During periods of deteriorating economic conditions, such as recessions or periods of rising unemployment, delinquencies and losses generally increase, sometimes dramatically, with respect to securitizations involving mortgage loans. Many so-called sub-prime mortgage pools have become distressed during periods of economic distress and may trade at significant discounts to their face value during such periods.

Additionally, mortgage lenders may adjust their loan programs and underwriting standards, which may reduce the availability of mortgage credit to prospective mortgagors. This may result in reduced availability of financing alternatives for mortgagors seeking to refinance their mortgage loans. The reduced availability of refinancing options for mortgagors may result in higher rates of delinquencies, defaults and losses on mortgage loans, particularly in the case of, but not limited to, mortgagors with adjustable rate mortgage loans or interest-only mortgage loans that experience significant increases in their monthly payments following the adjustment date or the end of the interest-only period (see “Adjustable Rate Mortgages” below for further discussion of adjustable rate mortgage risks). These events, alone or in combination with each other and with deteriorating economic conditions in the general economy, may contribute to higher delinquency and default rates on mortgage loans. Tighter underwriting guidelines for residential mortgage loans, together with lower levels of home sales and reduced refinance activity, also may contribute to a reduction in the prepayment rate for mortgage loans generally. The values of mortgage-backed securities may be substantially dependent on the servicing of the underlying mortgage pools, and therefore are subject to risks associated with the negligence or malfeasance by their servicers and to the credit risk of their servicers. In certain circumstances, the mishandling of related documentation also may affect the rights of security holders in and to the underlying collateral.

Mortgage loans may experience greater rates of delinquency and foreclosure due to underwriting standards. These mortgage loans may not meet the sponsor’s general underwriting policies for prime mortgage loans due to borrower credit characteristics. In addition, the underwriting program may permit less restrictive underwriting criteria as compared to general underwriting criteria, including additional types of mortgaged properties, categories of borrowers and/or reduced documentation requirements, such as no verification of income or no verification of assets. As a consequence, delinquencies, foreclosures and cumulative losses may be expected to be greater with respect to these mortgage loans than with respect to mortgage loans originated in conformity with the general underwriting standards. A Fixed Income Fund may invest in any level of the capital structure of an issuer of mortgage-backed or asset-backed securities, including the equity or “first loss” tranche. See “—Collateralized Debt Obligations” above for a discussion of investments in structured products with multiple tranches. The U.S. government conservatorship of Freddie Mac and Fannie Mae in September 2008 and its ultimate resolution may adversely affect the real estate market, the value of real estate-related assets generally and markets generally. In addition, there may be proposals from the U.S. Congress or other branches of the U.S. government regarding the conservatorship, including regarding reforming Fannie Mae and Freddie Mac or winding down their operations, which may or may not come to fruition. There can be no assurance that such proposals, even those that are not adopted, will not adversely affect the values of the Fixed Income Fund’s assets.

The FHFA, as conservator or receiver of Fannie Mae and Freddie Mac, has the power to repudiate any contract entered into by Fannie Mae or Freddie Mac prior to its appointment if it determines that performance of the contract is burdensome and repudiation of the contract promotes the orderly administration of Fannie Mae’s or Freddie Mac’s affairs. In the event the guaranty obligations of Fannie Mae or Freddie Mac are repudiated, the payments of interest to holders of Fannie Mae or Freddie Mac mortgage-backed securities would be reduced if payments on the mortgage loans represented in the mortgage loan groups related to such mortgage-backed securities are not made by the borrowers or advanced by the servicer. Any actual direct compensatory damages for repudiating these guaranty obligations may not be sufficient to offset any shortfalls experienced by such mortgage-backed security holders.

Further, in its capacity as conservator or receiver, FHFA has the right to transfer or sell any asset or liability of Fannie Mae or Freddie Mac without any approval, assignment or consent. If FHFA were to transfer any such guaranty obligation to another party, holders of Fannie Mae or Freddie Mac mortgage-backed securities would have to rely on that party for satisfaction of the guaranty obligation and would be exposed to the credit risk of that party.

Liquidity Risk of Mortgage-Backed Securities. The liquidity of mortgage-backed securities varies by type of security; at certain times a Fixed Income Fund may encounter difficulty in disposing of such investments. Investments in privately issued mortgage-backed securities may have less liquidity than mortgage-backed securities that are issued by a federal government agency or sponsored corporation. Because mortgage-backed securities have the potential to be less liquid than other securities, a Fixed Income Fund may be more susceptible to liquidity risks than funds that invest in other securities. In the past, in stressed markets, certain types of mortgage-backed securities suffered periods of illiquidity when disfavored by the market. It is possible that a Fixed Income Fund may be unable to sell a mortgage-backed security at a desirable time or at the value the Fixed Income Fund has placed on the investment.

Commercial Mortgage-Backed Securities (“CMBS”) Risks. CMBS include securities that reflect an interest in, or are secured by, mortgage loans on commercial real property. Many of the risks of investing in commercial mortgage-backed securities reflect the risks of investing in the real estate securing the underlying mortgage loans. These risks reflect the effects of local and other economic conditions on real estate markets, the ability of tenants to make loan payments and the ability of a property to attract and retain tenants. Commercial mortgage-backed securities may be less liquid and exhibit greater price volatility than other types of mortgage- or asset-backed securities.

Prepayment, Extension, and Redemption Risks of Mortgage-Backed Securities. Mortgage-backed securities may reflect an interest in monthly payments made by the borrowers who receive the underlying mortgage loans. Although the underlying mortgage loans are for specified periods of time, such as 20 or 30 years, the borrowers can, and historically have often paid them off sooner. When a prepayment happens, a portion of the mortgage-backed security which represents an interest in the underlying mortgage loan will be prepaid. A borrower is more likely to prepay a mortgage which bears a relatively high rate of interest. This means that in times of declining interest rates, a portion of the Fixed Income Fund’s higher yielding securities are likely to be redeemed and the Fixed Income Fund will probably be unable to replace them with securities having as great a yield. Prepayments can result in lower yields to shareholders. The increased likelihood of prepayment when interest rates decline also limits market price appreciation. This is known as prepayment risk. Mortgage-backed securities also are subject to extension risk. Extension risk is the possibility that rising interest rates may cause prepayments to occur at a slower than expected rate. This particular risk may effectively change a security which was considered short or intermediate term into a long-term security. The values of long-term securities generally fluctuate more widely in response to changes in interest rates than short or intermediate-term securities. In addition, a mortgage-backed security may be subject to redemption at the option of the issuer. If a mortgage-backed security held by the Fixed Income Fund is called for redemption, the Fixed Income Fund will be required to permit the issuer to redeem or pay-off the security, which could have an adverse effect on the Fixed Income Fund’s ability to achieve its investment objective.

Collateralized Mortgage Obligations (CMOs). CMOs are debt obligations collateralized by mortgage loans or mortgage pass-through securities. The expected average life of CMOs is determined using mathematical models that incorporate prepayment assumptions and other factors that involve estimates of future economic and market conditions. These estimates may vary from actual future results, particularly during periods of extreme market volatility. Further, under certain market conditions, the average weighted life of certain CMOs may not accurately reflect the price volatility of such securities. For example, in periods of supply and demand imbalances in the market for such securities and/or in periods of sharp interest rate movements, the prices of CMOs may fluctuate to a greater extent than would be expected from interest rate movements alone. CMOs issued by private entities are not obligations issued or guaranteed by the U. S. Government, its agencies or

instrumentalities and are not guaranteed by any government agency, although the securities underlying a CMO may be subject to a guarantee. Therefore, if the collateral securing the CMO, as well as any third party credit support or guarantees, is insufficient to make payments when due, the holder could sustain a loss.

Adjustable Rate Mortgages. ARMs contain maximum and minimum rates beyond which the mortgage interest rate may not vary over the lifetime of the security. In addition, many ARMs provide for additional limitations on the maximum amount by which the mortgage interest rate may adjust for any single adjustment period. Alternatively, certain ARMs contain limitations on changes in the required monthly payment. In the event that a monthly payment is not sufficient to pay the interest accruing on an ARM, any excess interest is added to the principal balance of the mortgage loan, which is repaid through future monthly payments. If the monthly payment for such an instrument exceeds the sum of the interest accrued at the applicable mortgage interest rate and the principal payment required at such point to amortize the outstanding principal balance over the remaining term of the loan, the excess is used to reduce the then-outstanding principal balance of the ARM.

In addition, certain ARMs may provide for an initial fixed, below-market or teaser interest rate. During this initial fixed-rate period, the payment due from the related mortgagor may be less than that of a traditional loan. However, after the teaser rate expires, the monthly payment required to be made by the mortgagor may increase significantly when the interest rate on the mortgage loan adjusts. This increased burden on the mortgagor may increase the risk of delinquency or default on the mortgage loan and in turn, losses on the mortgage-backed security into which that loan has been bundled.

Stripped Mortgage Securities. Part of the investment strategy of a Fixed Income Fund may involve the purchase of interest-only or principal-only Stripped Mortgage Securities. The yield to maturity on a PO or an IO class security is extremely sensitive to the rate of principal payments (including prepayments) on the related underlying mortgage assets. A slower than expected rate of principal payments may have an adverse effect on a PO class security's yield to maturity. If the underlying mortgage assets experience slower than anticipated principal repayment, the Fixed Income Fund may fail to fully recoup its initial investment in these securities. Conversely, a rapid rate of principal payments may have a material adverse effect on an IO class security's yield to maturity. If the underlying mortgage assets experience greater than anticipated prepayments or principal, the Fixed Income Fund may fail to fully recoup its initial investment in these securities. These investments are highly sensitive to changes in interest and prepayment rates and tend to be less liquid than other CMOs.

Inverse Floaters and Related Securities Risk. Investments in inverse floaters and similar instruments expose a Fixed Income Fund to the same risks as investments in debt securities and derivatives, as well as other risks, including those associated with leverage and increased volatility. An investment in these securities typically will involve greater risk than an investment in a fixed rate security. Distributions on inverse floaters and similar instruments will typically bear an inverse relationship to short-term interest rates and typically will be reduced or, potentially, eliminated as interest rates rise. The rate at which interest is paid on an inverse floater may vary by a magnitude that exceeds the magnitude of the change in a reference rate of interest (typically a short-term interest rate), and the market prices of inverse floaters may as a result be highly sensitive to changes in interest rates and in prepayment rates on the underlying securities, and may decrease significantly when interest rates increase or prepayment rates change. The effect of the reference rate multiplier in inverse floaters is associated with greater volatility in their market values. Investments in inverse floaters and similar instruments that have mortgage-backed securities underlying them will expose a Fixed Income Fund to the risks associated with those mortgage-backed securities and the values of those investments may be especially sensitive to changes in prepayment rates on the underlying mortgage-backed securities.

Mortgage Dollar Rolls

Mortgage dollar rolls involve the risk that the market value of the securities a Fixed Income Fund is obligated to repurchase under an agreement may decline below the price of the security the Fixed Income Fund sold for immediate settlement. Mortgage dollar rolls are speculative techniques involving leverage, and can have an economic effect similar to borrowing money for investment purposes.

Options Transactions

The effective use of options depends on a Fixed Income Fund's ability to terminate option positions at times when the Adviser deems it desirable to do so. Prior to exercise or expiration, an OTC Option position can only be terminated with the consent of the counterparty, although either party may engage in an offsetting transaction that puts that party in the same economic position as if it had closed out the option with the counterparty; however, the exposure to counterparty risk may differ. No guarantee exists that the Fund will be able to effect a closing purchase or a closing sale with respect to a specific option at any particular time. If a call option writer is unable to effect such a termination, it cannot sell the underlying security until the option expires or the option is exercised. Accordingly, a call option writer may not be able to sell an underlying security at a time when it might otherwise be advantageous to do so. A put option writer who is unable to effect a closing purchase transaction or to purchase an offsetting OTC Option would continue to bear the risk of decline in the market price of the underlying security until the option expires or is exercised.

In addition, a put or call writer would be unable to utilize the amount held in cash, U.S. government securities, or other liquid securities as security for the option for other investment purposes until the exercise or expiration of the option.

A Fixed Income Fund's ability to close out its position as a writer of an option is dependent upon the existence of a liquid market. There is no assurance that such a market will exist, particularly in the case of OTC Options, as such options will generally only be closed out by entering into a closing purchase transaction with the purchasing dealer. However, the Fixed Income Fund may be able to purchase an offsetting option which does not close out its position as a writer but constitutes an asset of equal value to the obligation under the option written. If the Fixed Income Fund is not able to either enter into a closing purchase transaction or purchase an offsetting position, it will be required to maintain the securities subject to the call, or the collateral underlying the put, even though it might not be advantageous to do so, until a closing transaction can be entered into (or the option is exercised or expires).

There can be no assurance that a liquid market will exist when the Fixed Income Fund seeks to close out an option position. Reasons for the absence of a liquid market on an exchange include the following: (i) there may be insufficient trading interest in certain options; (ii) restrictions may be imposed by an exchange on opening transactions or closing transactions or both; (iii) trading halts, suspensions or other restrictions may be imposed with respect to particular classes or series of options; (iv) unusual or unforeseen circumstances may interrupt normal operations on an exchange; (v) the facilities of an exchange clearinghouse may not at all times be adequate to handle current trading volume; or (vi) one or more exchanges could, for economic or other reasons, decide or be compelled at some future date to discontinue the trading of options (or a particular class or series of options). If trading were discontinued, the market on that exchange (or in that class or series of options) would cease to exist.

In addition, the hours of trading for options may not conform to the hours during which securities held by a Fixed Income Fund are traded. To the extent that the options markets close before or open later than the markets for underlying securities, significant price and rate movements can take place in the underlying markets that cannot be reflected in the options markets. In addition, a Fixed Income Fund's listed options transactions will be subject to limitations established by each of the exchanges, boards of trade or other trading facilities on which the options are traded. These limitations govern the maximum number of options in each class which may be written or purchased by a single investor or group of investors acting in concert, regardless of whether the options are written or purchased on the same or different exchanges, boards of trade or other trading facilities or are held or written in one or more accounts or through one or more brokers. Thus, the number of options which a Fixed Income Fund may write (sell) or purchase may be affected by options written or purchased by other investment advisory clients of the Adviser. An exchange, board of trade or other trading facility may order the liquidation of positions found to be in excess of these limits, and it may impose other sanctions or restrictions. These position limits may restrict the number of listed options which a Fixed Income Fund may write.

See also “Counterparty Risk” and “Clearing Broker and Central Clearing Counterparty Risk” in this SAI.

“American style” call options may be exercised at any time during the term of the option and thus the writer of such an option has no control over the time when it may be required to fulfill its obligation as a writer of an option.

Other options, known as “European style” options, may be exercised only on the expiration date of the option. Regardless of the option style, once an option writer has received an exercise notice, it cannot effect a closing purchase transaction in order to terminate its obligation under the option and must deliver the underlying instrument or the contract value of the relevant index at the exercise price. If a put or call option purchased by a Fixed Income Fund is not sold when it has remaining value, and if the market price of the underlying instrument or the value of the index remains equal to or greater than the exercise price (in the case of a put), or remains less than or equal to the exercise price (in the case of a call), the Fixed Income Fund will lose its entire investment in the option. Also, where a put or call option on a particular security or index is purchased to hedge against price movements in a related security or securities, the price of the put or call option may move more or less than the price of the related security or securities.

Investments in options are also subject to the risks described under “Counterparty Risk” in this SAI. To the extent that a Fixed Income Fund utilizes unlisted (or OTC) options, the Fixed Income Fund’s ability to terminate these options may be more limited than with exchange-traded options and may involve enhanced risk that counterparties participating in such transactions will not fulfill their obligations.

See also “Risks Arising from Government Regulation of Derivatives” in this SAI.

Privately Held Companies and Private Funds Risk

Investments in privately-held companies and private funds may present greater opportunity for growth, but there are significant risks associated with these investments. Many privately-held companies and the companies in which private funds invest may be smaller firms with less experienced management, limited product lines, undeveloped markets, limited financial resources, and a limited or no history of profits. They may also be dependent on certain key managers and third parties, need more personnel and other resources to manage growth and require significant additional capital.

In addition, the risks associated with investing in companies in the early stages of product development are greater than those associated with more established companies because the business concepts of those companies are generally unproven, the companies have little or no track record, and the companies are more vulnerable to competition, technological advances and changes in market and economic conditions. Since privately-held companies do not file periodic reports with the SEC, there is less publicly available information about them than about other companies.

A Fixed Income Fund may invest in privately-held companies and private funds that have already received funding from other sources. There may be significant competition for these types of investments, and the economic terms that a Fixed Income Fund would obtain from these companies and private funds may be less favorable than if the Fixed Income Fund had invested earlier. Moreover, a Fixed Income Fund’s ability to realize value from an investment in a privately-held company (or a private fund’s investment in a privately-held company) may be dependent upon the successful completion of the company’s IPO or the sale of the company to another company, which may not occur, if at all, for an extended period of time.

Investments in privately-held companies and private funds may be illiquid and a Fixed Income Fund may only be able to sell its holding in a privately-held company or private fund, if at all, at a price significantly below what the Adviser believes is its intrinsic value.

Restricted Securities, Rule 144A/Regulation S Securities Risk

A Fixed Income Fund may hold securities that the Fixed Income Fund is prevented or limited by law or the terms of an agreement from selling (a “**restricted security**”). To the extent that a Fixed Income Fund is permitted to sell a restricted security, there can be no assurance that a trading market will exist at any particular time and the Fixed Income Fund may be unable to dispose of the security promptly at reasonable prices or at all. A Fixed Income Fund may have to bear the expense of registering the securities for resale and the risk of substantial delays in effecting the registration. Also, restricted securities may be difficult to value because market quotations may not be readily available, and the values of restricted securities may have significant volatility. For example, Rule 144A permits a Fixed Income Fund to sell restricted securities to qualified institutional buyers without limitation. However, investing in Rule 144A securities could have the effect of increasing the level of the Fixed Income Fund’s illiquidity to the extent the Fixed Income Fund, at a particular point in time, may be unable to find qualified institutional buyers (or other purchasers qualified to buy such securities) interested in purchasing such securities.

Structured Products and Structured Notes Risk

Generally, structured investments are interests in entities organized and operated for the purpose of restructuring the investment characteristics of underlying investment interests or securities. These investment entities may be structured as trusts or other types of pooled investment vehicles. This type of restructuring generally involves the deposit with or purchase by an entity of the underlying investments and the issuance by that entity of one or more classes of securities backed by, or representing interests in, the underlying investments or referencing an indicator related to such investments. “Structured Products and Structured Notes Risk” refers to the risk that an investment in a structured product, which includes, among other things, CDOs, mortgage-backed securities, other types of asset-backed securities and certain types of structured notes, may decline in value due to changes in the underlying instruments, indexes, interest rates or other factors on which the product is based (“**reference measure**”). Depending on the reference measure used and the use of multipliers or deflators (if any), changes in interest rates and movement of the reference measure may cause significant price and cash flow fluctuations.

Application of a multiplier is comparable to the use of financial leverage, a speculative technique. Leverage magnifies the potential for gain and the risk of loss. As a result, a relatively small decline in the value of the underlying investments or referenced indicator could result in a relatively large loss in the value of a structured product. Holders of structured products indirectly bear risks associated with the reference measure, are subject to counterparty risk and typically do not have direct rights against the reference measure. A Fixed Income Fund generally has the right to receive payments to which it is entitled only from the structured product, and generally does not have direct rights against the issuer. While certain structured investment vehicles enable the investor to acquire interests in a pool of securities without the brokerage and other expenses associated with directly holding the same securities, investors in structured vehicles generally pay their share of the investment vehicle’s administrative and other expenses.

Structured products are generally privately offered and sold, and thus, are not registered under the securities laws and may be thinly traded or have a limited trading market and may have the effect of increasing a Fixed Income Fund’s illiquidity to the extent that the Fixed Income Fund, at a particular point in time, may be unable to find qualified buyers for these securities. In addition to the general risks associated with fixed income securities discussed herein, structured products carry additional risks including, but not limited to: (i) the possibility that distributions from underlying investments will not be adequate to make interest or other payments; (ii) the quality of the underlying investments may decline in value or default; (iii) the possibility that the security may be subordinate to other classes of the issuer’s securities; and (iv) the complex structure of the security may not be fully understood at the time of investment and may produce disputes with the issuer or unexpected investment results.

Other portions of this SAI provide more information about these specific structured products.

Structured notes are derivative securities for which the amount of principal repayment and/or interest payments is based on the movement of one or more “factors.” These factors may include, but are not limited to, currency exchange rates, interest rates (such as the prime lending rate or another industry-standard floating rate), referenced bonds and stock indices. Some of these factors may or may not correlate to the total rate of return on one or more underlying instruments referenced in such notes. In some cases, the impact of the movements of these factors may increase or decrease through the use of multipliers or deflators.

Investments in structured notes involve risks including interest rate risk, credit risk and market risk. Changes in interest rates and movement of the factor, when the return of the structured note is based on the movement of one or more factors, may cause significant price fluctuations. Additionally, changes in the value of the reference instrument or security may cause the interest rate on the structured note to be reduced to zero and any further changes in the reference instrument may then reduce the principal amount payable on maturity. In the case of structured notes where the reference instrument is a debt instrument, such as credit-linked notes, a Fixed Income Fund will be subject to the credit risk of the issuer of the reference instrument and the issuer of the structured note.

Temporary Defensive Strategies

When attempting to respond to adverse market, economic, political, or other conditions, a Fixed Income Fund may take temporary defensive positions that may be inconsistent (including materially inconsistent) with the Fixed Income Fund’s principal investment strategies. The Adviser then may, but is not required to, temporarily use alternative strategies that are mainly designed to limit the Fixed Income Fund’s exposure to such adverse conditions under the circumstances. In implementing these strategies, the Fixed Income Fund may invest primarily in, among other things, U.S. government and agency obligations, fixed or floating rate investments, derivative instruments, cash or money market instruments (including, money market funds), or any other securities or instruments that the portfolio manager(s) considers consistent with such defensive strategies or deemed consistent with the then existing market conditions. By way of example, a Fixed Income Fund may hold a higher than normal proportion of its assets in cash in times of extreme market stress. A Fixed Income Fund may also use derivatives, such as futures contracts, interest rate swaps, and credit default swaps, as an efficient means to adjust the Fixed Income Fund’s interest rate, credit, and other exposures in connection with taking such temporary defensive positions. During periods when a Fixed Income Fund has taken temporary defensive positions, the Fixed Income Fund may not achieve its investment objective.

Because it operates pursuant to the Order, when taking temporary defensive positions, the Equities ETF is only permitted to invest in ETFs and exchange-traded notes, common stocks, preferred stocks, American depositary receipts, real estate investment trusts, commodity pools, metals trusts, currency trusts and futures with reference assets the Fund may invest in directly, or in the case of an index future, based on an index of a type of asset that the Fund could invest in directly. All of these instruments will trade on an U.S. exchange contemporaneously with the Fund’s shares. The Equities ETF may also invest in cash and cash equivalents, which are short-term U.S. Treasury securities, government money market funds and repurchase agreements.

Risks of Zero-Coupon Bonds

Zero-coupon bonds are issued at a significant discount from their principal amount in lieu of paying interest periodically. Because zero-coupon bonds do not pay current interest in cash, their value is subject to greater fluctuation in response to changes in market interest rates than bonds that pay interest currently. Zero-coupon bonds allow an issuer to avoid the need to generate cash to meet current interest payments. Accordingly, such bonds may involve greater credit risks than bonds paying interest currently in cash. A Fixed Income Fund is required to accrue interest income on such investments and to distribute such amounts at least annually to shareholders even though the investments do not make any current interest payments. Thus, it may be necessary at times for a Fixed Income Fund to liquidate other investments in order to satisfy its distribution requirements under the Code.

PORTFOLIO TURNOVER

A portfolio turnover rate is, in summary, the percentage computed by dividing the lesser of a Fund's purchases or sales of securities (excluding short-term securities and certain derivatives) by the average market value of that Fund. The Adviser manages each Fund's assets by buying and selling securities to help attain its investment objective. This may result in increases or decreases in a Fund's current income and gains available for distribution to its shareholders. Each of the Funds may dispose of investments (including money market instruments) regardless of the holding period if, in the opinion of the Adviser, it is in the best interest of the Fund to do so, for example, because an issuer's creditworthiness or perceived changes in a company's growth prospects or asset value make selling them advisable. Such an investment decision may result in capital gains, including short-term capital gains taxable as ordinary income when distributed to taxable shareholders, or losses and could result in a high portfolio turnover rate during a given period. Transactions in equity securities typically involve the payment of brokerage commissions, which are borne by the Funds and negatively affect a Fund's performance. Debt securities are normally traded on a principal basis, involving a mark-up or mark-down of the price which is an indirect transaction cost, and therefore the Funds incur transaction costs when trading them. Its costs are incorporated in purchase or sale prices and negatively affect the Funds' performance.

The portfolio turnover rates of the Funds for the fiscal years ended September 30, 2022 and September 30, 2023 are as follows:

| Fund | 2022 | 2023 |
|-----------------------------|-------------|-------------|
| Opportunistic Bond ETF | 183% | 169% |
| Commercial Real Estate ETF* | - | 36% |
| Mortgage ETF* | - | 31% |
| Equities ETF | 175% | 217% |

* The Funds commenced operations on March 31, 2023.

DISCLOSURE OF PORTFOLIO INFORMATION

The Board of Trustees of the Trust (the "**Board**") has approved policies and procedures that govern the timing and circumstances regarding the disclosure of Fund portfolio holdings information to shareholders and third parties. These policies and procedures are designed to ensure that disclosure of information regarding the Funds' portfolio securities is in the best interests of Fund shareholders. These policies and procedures are also designed to address conflicts between the interests of the Funds' shareholders, on the one hand, and those of the Adviser, principal underwriter, or any affiliated person of the Funds, the Adviser, or the principal underwriter, on the other. Pursuant to such procedures, the Board has authorized the Adviser's Chief Compliance Officer (the "**Adviser CCO**") to authorize the release of the Funds' portfolio holdings, as necessary, in conformity with the foregoing principles. The Adviser CCO, either directly or through reports by the Funds' Chief Compliance Officer, reports quarterly to the Board regarding the operation and administration of such policies and procedures. Pursuant to applicable law, the Funds are required to disclose their complete portfolio holdings quarterly, within 60 days of the end of each fiscal quarter, and will provide that information to shareholders, as required by federal securities laws and regulations thereunder.

Fixed Income Funds

The Funds' entire portfolio holdings are publicly disseminated each day the Funds are open for business through financial reporting and news services including publicly available internet web sites. In addition, the composition of the Funds' in-kind creation baskets and the in-kind redemption baskets is publicly disseminated daily prior to the opening of the Exchange via the NSCC.

Greater than daily access to information concerning the Funds' portfolio holdings will be permitted (i) to certain personnel of service providers to the Funds involved in portfolio management and providing administrative,

operational, risk management, or other support to portfolio management, and (ii) to other personnel of the Funds' service providers who deal directly with, or assist in, functions related to investment management, administration, custody and fund accounting, as may be necessary to conduct business in the ordinary course in a manner consistent with applicable law, agreements with the Funds, and the terms of the Trust's current registration statement. From time to time, and in the ordinary course of business, such information may also be disclosed (i) to other entities that provide services to the Funds, including pricing information vendors, and third parties that deliver analytical, statistical or consulting services to the Funds and (ii) generally after it has been disseminated to the NSCC.

No person is authorized to disclose any of the Funds' portfolio holdings or other investment positions (whether in writing, by fax, by e-mail, orally, or by other means) except in accordance with the above. The Trust's Chief Compliance Officer may authorize disclosure of portfolio holdings. The Board reviews the implementation of this policy on a periodic basis.

Equities ETF

The Fund will not make its full portfolio holdings publicly available on a daily basis. Information regarding the Fund's portfolio holdings may be shared at any time with employees of the Adviser and other affiliated parties involved in the management, administration or operations of the Fund (referred to as fund-affiliated personnel). Any dissemination of non-public information that could be material must occur to all shareholders at the same time and in a forum typically used to disseminate information broadly.

Under its portfolio holdings disclosure policy, the Fund may release portfolio holdings information on a regular basis to its custodian or sub-custodians, its fund accounting agent, its proxy voting provider, an AP Representative (as defined below), any clearing broker used by an AP Representative, the entity responsible for the calculation of the verified intraday indicative value ("VIIV"), rating agency or other vendor or service provider for a legitimate business purpose, where the party receiving the information is under a duty of confidentiality, including a duty to prohibit the sharing of non-public information with unauthorized sources and trading upon non-public information. The Fund may enter into other ongoing arrangements for the release of portfolio holdings information, but only if such arrangements serve a legitimate business purpose and are with a party who is subject to a confidentiality agreement and restrictions on trading upon non-public information. None of the Fund, the Adviser, or any other affiliated party may receive compensation or any other consideration in connection with such arrangements.

The Fund's portfolio holdings are provided or otherwise available on a real-time basis to third-party service providers of the Fund (and their personnel) who require the information to provide services to the Fund, including: the Adviser; the Fund's custodian, JPMorgan Chase Bank, N.A.; pricing service providers, including Thomson Reuters/Lipper; liquidity risk management program service providers, including ICE Data Pricing & Reference Data, LLC; broker-dealers who facilitate the Fund's trading; creditors or securities lending agents (if any); the Fund's administrator, JPMorgan Chase Bank, N.A.; auditors, including the Fund's Independent Registered Public Accounting Firm, Deloitte & Touche LLP; AP Representatives; ICE Data Services, the party responsible for the calculation of the VIIV; service providers for back office/support services, including Bank of New York Mellon; and Ropes & Gray LLP, counsel to the Fund.

The approval of the Fund's Chief Compliance Officer, or his or her designee, must be obtained before entering into any new ongoing arrangement or modifying any existing ongoing arrangement to make available portfolio holdings information, or with respect to any exceptions from the policy.

Because the Fund will not publicly disclose its portfolio holdings daily, the selective disclosure of material nonpublic information, including information other than portfolio information, would be more likely to provide an unfair advantage to the recipient than in other ETFs. Accordingly, the Fund and each person acting on behalf of the Fund will be required to comply with Regulation Fair Disclosure as if it applied to them (except that the

exemptions provided in Rule 100(b)(2)(iii) therein shall not apply). In addition, the portfolio holdings will be considered material, non-public information under the Code of Ethics of the Fund, the Adviser, and Distributor and the agreements related to the Fund's other service providers with, or any other party given, access to the portfolio holdings, including the custodian, administrator and fund accountant, will include appropriate confidentiality provisions and be generally prohibited from using this information for any purpose other than providing services to the Fund, including trading based upon this information.

As described below, the Fund will select and utilize an AP Representative who will establish and maintain a Confidential Account (as defined below) for the benefit of an AP, in order to engage in in-kind creation and redemption activity. Each day, the Fund's custodian will transmit the composition of the Fund's Creation Basket (as defined below) to each AP Representative.

Pursuant to a Confidential Account Agreement (as defined below), the AP Representative will be restricted from disclosing the Creation Basket and will undertake an obligation not to use the identity or weighting of the securities in the Creation Basket for any purpose other than executing creations and redemptions for the Fund. The Confidential Account will enable APs to transact in the underlying securities of the Creation Basket through their AP Representatives, enabling them to engage in in-kind creation or redemption activity.

In addition, in connection with the management of the Fund's investment exposure, including, specifically, with respect to the re-constitution or re-balancing of the Shiller Barclays CAPE® US Sector TR USD Index (the "Index"), the Fund may make its current portfolio holdings available publicly on the Fund's website at <https://doubleline.com/wp-content/uploads/DoubleLine-Shiller-Enhanced-CAPE-Holdings.pdf>. Such information, when it is made available, will be made available in connection with the re-constitution or re-balancing of the Index, and will be made available within five business days prior to month end.

Fixed Income Funds and Equities ETF

The Funds will disclose a complete or summary schedule of investments (which includes a Fund's 50 largest holdings in unaffiliated issuers and each investment in unaffiliated issuers that exceeds one percent of the Fund's net asset value ("**Summary Schedule**")) in its Semi-Annual and Annual Reports which are distributed to Fund shareholders. Each Fund's complete schedule of investments following the first and third fiscal quarters is available in quarterly holdings reports filed with the SEC as exhibits to Form N-PORT, and each Fund's complete schedule of investments following the second and fourth fiscal quarters is available in Shareholder Reports filed with the SEC on Form N-CSR.

Complete schedules of investments filed with the SEC on Form N-CSR and as exhibits to Form N-PORT are not distributed to Fund shareholders but are available, free of charge, on the SEC's website at www.sec.gov. Should a Fund include only a Summary Schedule rather than a complete schedule of investments in its Semi-Annual and Annual Reports, its complete schedule of investments will be available without charge, upon request, by calling (855) 937-0772 or on the Funds' website at www.doubleline.com.

EXCHANGE LISTING AND TRADING

A discussion of exchange listing and trading matters associated with an investment in a Fund is contained in the "Purchase and Sale of Fund Shares" section in each Fund's summary section of the Prospectus. The discussion below supplements, and should be read in conjunction with, such section of the Prospectus.

The shares of each Fund are listed for trading on the NYSE Arca, Inc. (the "**Exchange**"). The shares of each Fund trade on the Exchange at prices that may differ from the Fund's NAV. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of shares of a Fund will continue to be met.

The Exchange may, but is not required to, remove the shares of a Fund from listing subject to certain conditions, including if: (1) following the initial twelve-month period after the commencement of trading on the Exchange of

the Fund's shares, there are fewer than 50 beneficial holders of the shares; (2) the Exchange has halted trading in the Fund's shares because the VIIV is interrupted pursuant to the rules applicable to the Exchange and such interruption persists past the trading day in which it occurred or is no longer available; (3) the Exchange has halted trading in the Fund's shares because the NAV is not disseminated to all market participants at the same time, the holdings of the Fund are not made available on at least a quarterly basis as required by the 1940 Act, or such holdings are not made available to all market participants at the same time pursuant to the rules applicable to the Exchange and such issue persists past the trading day in which it occurred; (4) the Exchange has halted trading in the Fund's shares pursuant to the rules applicable to the Exchange and such issue persists past the trading day in which it occurred; (5) the Trust has failed to make filings required by the SEC or the Exchange is aware that the Trust is not in compliance with the conditions of any applicable exemptive order or no-action relief granted by the SEC or SEC staff to the Trust with respect to the Fund; (6) any of the continued listing requirements set forth in rules applicable to the Exchange are not continuously maintained; (7) any of the applicable continued listing representations for the Fund are not continuously met; or (8) such other event shall occur or condition exists which, in the opinion of the Exchange, makes further dealings on the Exchange inadvisable. In addition, the Exchange will remove the shares of a Fund from listing and trading upon termination of the Trust or the Fund.

As in the case of other publicly traded securities, brokers' commissions on transactions will be based on commission rates charged by the applicable broker.

With respect to non-transparent active ETFs, in order to provide information regarding the indicative value of shares of each Fund, an updated VIIV will be disseminated every second, through the facilities of the Consolidated Tape Association or through other widely disseminated means, for the Fund as calculated by a verification agent based on two independent calculations. A Fund's VIIV is based on a securities component and a cash component which comprises that day's portfolio holdings, which is provided to the verification agent prior to that business day's (as defined below) commencement of trading. The VIIV is based on the precise composition of the current portfolio of securities held by the applicable Fund each day. Therefore, under normal circumstances, the VIIV is effectively a "real-time" update of a Fund's NAV, which is computed only once each day after the end of the trading day. The specific methodology for calculating each Fund's VIIV will be disclosed on the Fund's website.

The Trust reserves the right to adjust the share prices of a Fund in the future to maintain convenient trading ranges for investors. Any adjustments would be accomplished through stock splits or reverse stock splits, which would have no effect on the net assets of the applicable Fund or an investor's equity interest in the Fund.

The base and trading currencies of each Fund are the U.S. dollar. The base currency is the currency in which a Fund's NAV per share is calculated and the trading currency is the currency in which shares of the Fund are listed and traded on the Exchange.

CONTINUOUS OFFERING

The method by which Creation Units are created and traded may raise certain issues under applicable securities laws. Because new Creation Units of shares are issued and sold by the Funds on an ongoing basis, at any point a "distribution," as such term is used in the Securities Act, may occur. Broker-dealers and other persons are cautioned that some activities on their part may, depending on the circumstances, result in their being deemed participants in a distribution in a manner which could render them statutory underwriters and subject them to the prospectus delivery requirement and liability provisions of the Securities Act.

For example, a broker-dealer firm or its client may be deemed a statutory underwriter if it takes Creation Units after placing an order with the Distributor (as defined below), breaks the Creation Units down into constituent shares, and sells such shares directly to customers, or if it chooses to couple the creation of a supply of new shares with an active selling effort involving solicitation of secondary market demand for shares. A

determination of whether one is an underwriter for purposes of the Securities Act must take into account all the facts and circumstances pertaining to the activities of the broker-dealer or its client in the particular case, and the examples mentioned above should not be considered a complete description of all the activities that could lead to a categorization as an underwriter.

Broker-dealer firms should also note that dealers who are not “underwriters,” but are effecting transactions in shares, whether or not participating in the distribution of shares, are generally required to deliver a prospectus. This is because the prospectus delivery exemption in Section 4(3) of the Securities Act is not available with respect to such transactions as a result of Section 24(d) of the 1940 Act. Firms that incur a prospectus-delivery obligation with respect to Fund shares are reminded that, under Rule 153 of the Securities Act, a prospectus delivery obligation under Section 5(b)(2) of the Securities Act owed to an exchange member in connection with a sale on an exchange is satisfied by the fact that the prospectus is available at the exchange upon request. The prospectus delivery mechanism provided in Rule 153 is only available with respect to transactions on an exchange.

BOOK ENTRY ONLY SYSTEM

DTC acts as securities depository for the Fund shares. Shares of each Fund are represented by securities registered in the name of DTC or its nominee and deposited with, or on behalf of, DTC. Certificates will not be issued for shares of the Funds.

DTC, a limited-purpose trust company, was created to hold securities of its participants (“**DTC Participants**”) and to facilitate the clearance and settlement of securities transactions among the DTC Participants in such securities through electronic book-entry changes in accounts of the DTC Participants, thereby eliminating the need for physical movement of securities’ certificates. DTC Participants include securities brokers and dealers, banks, trust companies, clearing corporations and certain other organizations, some of which (and/or their representatives) own DTC. More specifically, DTC is owned by a number of DTC Participants and by the NYSE and FINRA. Access to the DTC system is also available to others such as banks, brokers, dealers and trust companies that clear through or maintain a custodial relationship with a DTC Participant, either directly or indirectly (the “Indirect Participants”).

Beneficial ownership of Fund shares is limited to DTC Participants, Indirect Participants and persons holding interests through DTC Participants and Indirect Participants. Ownership of beneficial interests in Fund shares (owners of such beneficial interests are referred to herein as “**Beneficial Owners**”) is shown on, and the transfer of ownership is effected only through, records maintained by DTC (with respect to DTC Participants) and on the records of DTC Participants (with respect to Indirect Participants and Beneficial Owners that are not DTC Participants). Beneficial Owners will receive from or through the DTC Participant a written confirmation relating to their purchase of Fund shares.

Conveyance of all notices, statements and other communications to Beneficial Owners is effected as follows. Pursuant to the Depositary Agreement between the Trust and DTC, DTC is required to make available to the Trust upon request and for a fee to be charged to the Trust a listing of the shares of each Fund held by each DTC Participant. The Trust shall inquire of each such DTC Participant as to the number of Beneficial Owners holding shares, directly or indirectly, through such DTC Participant. The Trust shall provide each such DTC Participant with copies of such notice, statement or other communication, in such form and number and at such place as such DTC Participant may reasonably request, in order that such notice, statement or communication may be transmitted by such DTC Participant, directly or indirectly, to such Beneficial Owners. In addition, the Trust shall pay to each such DTC Participant a fair and reasonable amount as reimbursement for the expenses attendant to such transmittal, all subject to applicable statutory and regulatory requirements.

Share distributions shall be made to DTC or its nominee, Cede & Co., as the registered holder of all Fund shares. DTC or its nominee, upon receipt of any such distributions, shall immediately credit DTC Participants’ accounts

with payments in amounts proportionate to their respective beneficial interests in shares as shown on the records of DTC or its nominee. Payments by DTC Participants to Indirect Participants and Beneficial Owners of Fund shares held through such DTC Participants will be governed by standing instructions and customary practices, as is now the case with securities held for the accounts of customers in bearer form or registered in a “street name,” and will be the responsibility of such DTC Participants.

The Trust has no responsibility or liability for any aspects of the records relating to or notices to Beneficial Owners, or payments made on account of beneficial ownership interests in such shares, or for maintaining, supervising or reviewing any records relating to such beneficial ownership interests, or for any other aspect of the relationship between DTC and the DTC Participants or the relationship between such DTC Participants and the Indirect Participants and Beneficial Owners owning through such DTC Participants.

DTC may determine to discontinue providing its service with respect to the Fund shares at any time by giving reasonable notice to the Trust and discharging its responsibilities with respect thereto under applicable law.

Under such circumstances, the Trust shall take action either to find a replacement for DTC to perform its functions at a comparable cost or, if such a replacement is unavailable, to issue and deliver printed certificates representing ownership of shares, unless the Trust makes other arrangements with respect thereto satisfactory to the Exchange.

PURCHASE AND REDEMPTION OF SHARES IN CREATION UNITS

Each Fund issues and redeems its shares on a continuous basis, at NAV, only in a large specified number of shares called a “**Creation Unit**,” either principally in-kind for securities or in cash for the value of such securities. The NAV of a Fund’s shares is determined once each Business Day¹, as described under “Calculation of NAV” in the Funds’ prospectus. The Creation Unit size may change. Authorized Participants (defined below) will be notified of such change.

With respect to non-transparent ETFs, each Authorized Participant will establish and maintain a confidential brokerage account (a “**Confidential Account**”) with an agent (each, an “AP Representative”), for the benefit of the Authorized Participant, in order to engage in in-kind creation and redemption activity.

Purchase (Creation). The Trust issues and sells shares of the Funds only: (i) in Creation Units on a continuous basis through the Distributor, without a sales load (but subject to transaction fees), at their NAV per share next determined after receipt of an order, on any Business Day, in proper form pursuant to the terms of the Authorized Participant Agreement (“**Participant Agreement**”). The Funds will not issue fractional Creation Units.

Fund Deposit. The consideration for purchase of a Creation Unit of a Fund generally consists of (i) the in-kind deposit of a designated portfolio of securities (the “**Deposit Securities**”) – per each Creation Unit constituting a substantial replication, or a representation, of the securities included in the Fund’s portfolio and (ii) if applicable, an amount of cash (the “**Cash Component**”). Together, the Deposit Securities and the Cash Component, if applicable, constitute the “**Fund Deposit**,” which represents the minimum initial and subsequent investment amount for a Creation Unit of a Fund.

¹ A “Business Day” with respect to each Fund is any day the Fund is open for business, including any day when it satisfies redemption requests as required by Section 22(e) of the 1940 Act. Each Fund is open for business any day on which the New York Stock Exchange is open for business. As of the date of this SAI, the New York Stock Exchange is open for trading Monday through Friday and is closed on weekends and the following holidays: New Year’s Day, Martin Luther King, Jr. Day, Presidents’ Day, Good Friday, Memorial Day, Juneteenth National Independence Day, Independence Day, Labor Day, Thanksgiving Day and Christmas Day. On days when the NYSE is open for trading, but the fixed income markets close early or are closed (e.g., Columbus Day and Veterans Day), all or substantially all of the investment portfolios of the Fixed Income Funds are expected to be fair valued.

The Cash Component is an amount equal to the difference between the NAV of the shares of the Fund (per Creation Unit) and the market value of the Deposit Securities. If the Cash Component is a positive number (i.e., the NAV per Creation Unit exceeds the market value of the Deposit Securities), the Cash Component shall be such positive amount. If the Cash Component is a negative number (i.e., the NAV per Creation Unit is less than the market value of the Deposit Securities), the Cash Component shall be such negative amount and the creator will be entitled to receive cash in an amount equal to the Cash Component. The Cash Component serves the function of compensating for any differences between the NAV per Creation Unit and the market value of the Deposit Securities. Computation of the Cash Component excludes any stamp duty or other similar fees and expenses payable upon transfer of beneficial ownership of the Deposit Securities, if applicable, which shall be the sole responsibility of the Authorized Participant (as defined below).

Traditional ETFs only. The Custodian, through the National Securities Clearing Corporation (“NSCC”), makes available to each AP on each Business Day, prior to the opening of business on the Exchange (currently 9:30 a.m., Eastern Time), the list of the company names and the required number of shares of each Deposit Security, as applicable, to be included in the current Fund Deposit (based on information at the end of the previous Business Day) for a Fund. Such Fund Deposit is subject to any applicable adjustments as described below, in order to effect purchases of Creation Units of the Fund until such time as the next-announced composition of the Deposit Securities is made available.

The identity and number of shares of the Deposit Securities required for a Fund Deposit for each Fund changes time to time by the Adviser, as applicable, with a view to the investment objective of the Fund. In addition, the Trust reserves the right to permit or require the substitution of an amount of cash – i.e., a “cash in lieu” amount – to be added to the Cash Component to replace any Deposit Security which may not be available in sufficient quantity for delivery or which may not be eligible for transfer through the Clearing Process or which may not be eligible for trading by an AP or the investor for which it is acting. The Trust also reserves the right to offer an “all cash” option for creations of Creation Units for the Funds.

In addition to the list of names and numbers of securities constituting the current Deposit Securities of a Fund Deposit, the Custodian, through the NSCC, also makes available on each Business Day, the estimated Cash Component, effective through and including the previous Business Day, per outstanding Creation Unit of the Fund.

Non-Transparent Active ETFs only. Pursuant to a contract (the “**Confidential Account Agreement**”), the AP Representative will be restricted from disclosing the identity and weightings of the Deposit Securities. In addition, the AP Representative will undertake an obligation not to use the identity or weighting of the Deposit Securities and Fund Securities for any purpose other than executing creations and redemptions for a Fund. The confidential account will enable Authorized Participants to transact in the Deposit Securities and Fund Securities through their AP Representatives, enabling Authorized Participants to engage in in-kind creation or redemption activity without knowing the identity or weighting of those securities. Acting on execution instructions from an Authorized Participant, the AP Representative may purchase or sell the Deposit Securities and Fund Securities for purposes of effecting in-kind creation and redemption activity during the day.

The identity and number of shares of the Deposit Securities and the Cash Component, as applicable, required for the Fund Deposit for a Fund changes as portfolio decisions, rebalancing adjustments and corporate action events are reflected from time to time by the Adviser with a view to the investment objective of the Fund.

Cash Purchase Method. The Trust may at its discretion, and with respect to the Equities ETF, in accordance with the Order, permit full or partial cash purchases of Creation Units of a Fund. When full or partial cash purchases of Creation Units are available or specified for a Fund, they will be effected in essentially the same manner as in-kind purchases thereof. In the case of a full or partial cash purchase, the Authorized Participant, through the AP or AP Representative, must pay the cash equivalent of the Deposit Securities it would otherwise provide through an in-kind purchase, plus the same Cash Component required to be paid in connection with an

in-kind purchase, together with a creation transaction fee and non-standard charges, as may be applicable. When accepting full or partial cash purchases of Creation Units, a Fund may incur additional costs associated with the acquisition of Deposit Securities that would otherwise have been provided in connection with an in-kind purchase. These additional costs may be recoverable from the purchaser of the Creation Units.

Procedures for Purchase of Creation Units. To be eligible to place orders to purchase a Creation Unit of a Fund, an entity must be (i) a “Participating Party”, i.e., a broker-dealer or other participant in the clearing process through the Continuous Net Settlement System of the NSCC (the “**Clearing Process**”), a clearing agency that is registered with the SEC; or (ii) a DTC Participant (see “BOOK ENTRY ONLY SYSTEM”). In addition, each Participating Party or DTC Participant (each, an “**Authorized Participant**”) must execute a Participant Agreement that has been agreed to by the Distributor, and that has been accepted by the Transfer Agent and the Trust, with respect to purchases and redemptions of Creation Units. Each Authorized Participant will agree, pursuant to the terms of a Participant Agreement, on behalf of itself or any investor on whose behalf it will act, to certain conditions, including that it will pay to the Trust, an amount of cash sufficient to pay the Cash Component together with the creation transaction fee and any other applicable fees, taxes, and additional variable charges. The Adviser may retain all or a portion of the creation transaction fee to the extent the Adviser bears the expenses that otherwise would be borne by the Trust in connection with the purchase of a Creation Unit, which the creation transaction fee is designed to cover.

All orders to purchase shares directly from a Fund must be placed for one or more Creation Units in the manner and by the time set forth in the Participant Agreement and/or applicable order form. With respect to the Funds, the order cut-off time for orders to purchase Creation Units is generally 2:00 p.m. Eastern time, which time may be modified by the Fund from time-to-time by amendment to the Participant Agreement and/or the applicable order form. The date on which an order to purchase Creation Units (or an order to redeem Creation Units, as set forth below) is received and accepted is referred to as the “Order Placement Date.”

An Authorized Participant may require an investor to make certain representations or enter into agreements with respect to the order (e.g., to provide for payments of cash, when required). Investors should be aware that their particular broker may not have executed a Participant Agreement and that, therefore, orders to purchase shares directly from a Fund in Creation Units have to be placed by the investor’s broker through an Authorized Participant that has executed a Participant Agreement. In such cases there may be additional charges to such investor. At any given time, there may be only a limited number of broker-dealers that have executed a Participant Agreement.

On days when the Exchange closes or is anticipated to close earlier than normal, a Fund may require orders to create Creation Units to be placed earlier in the day. In addition, if a market or markets on which a Fund’s investments are primarily traded is closed, the Fund also will generally not accept orders on such day(s). Orders must be transmitted by an Authorized Participant by telephone or other transmission method acceptable to the Distributor pursuant to procedures set forth in the Participant Agreement and in accordance with the AP handbook or applicable order form. The Distributor will notify the Custodian of such order. Those placing orders through an Authorized Participant should allow sufficient time to permit proper submission of the purchase order to the Distributor by the applicable cut-off time on such Business Day. Economic or market disruptions or changes, or telephone or other communication failure may impede the ability to reach the Distributor or an Authorized Participant.

Fund Deposits must be delivered by an Authorized Participant through the Federal Reserve System (for cash and U.S. government securities) or through DTC (for corporate securities), and/or through such other arrangements allowed by the Trust or its agents. The Fund Deposit transfer must be ordered by the Authorized Participant in a timely fashion so as to ensure the delivery of the Deposit Securities, and/or Cash Component, as applicable, to the account of a Fund or its agents by no later than the Settlement Date. The “Settlement Date” for the Funds is generally the second Business Day after the Order Placement Date. All questions as to the number of Deposit Securities and/or Cash Component to be delivered, as applicable, and the validity, form and eligibility (including

time of receipt) for the deposit of any tendered securities or cash, as applicable, will be determined by the Trust, whose determination shall be final and binding. The amount of cash represented by the Cash Component must be transferred directly to the Custodian through the Federal Reserve Bank wire transfer system in a timely manner so as to be received by the Custodian no later than the Settlement Date. If the Cash Component and the Deposit Securities, as applicable, are not received by the Custodian in a timely manner by the Settlement Date, the creation order may be cancelled and the Authorized Participant shall be liable to the applicable Fund for losses, if any, resulting therefrom. Upon written notice to the Distributor, such canceled order may be resubmitted the following Business Day using the Fund Deposit as newly constituted to reflect the then current NAV of the Fund.

The order shall be deemed to be received on the Business Day on which the order is placed provided that the order is placed in proper form and the federal funds in the appropriate amount are deposited prior to the applicable cut-off time, with the Custodian on the Settlement Date. If the order is not placed in proper form as required, or federal funds in the appropriate amount are not received by the order cut-off time on the Settlement Date, then the order may be deemed to be rejected and the Authorized Participant shall be liable to the applicable Fund for losses, if any, resulting therefrom. A creation request is considered to be in “proper form” if all procedures set forth in the Participant Agreement, AP Handbook, order form, and this SAI are properly followed. Effective May 28, 2024, the typical Settlement Date for each transaction in Creation Units will be T+1, unless the Fund and Authorized Participant agree to a different Settlement Date.

Issuance of a Creation Unit. Except as provided herein, Creation Units will not be issued until the transfer of good title to the Trust of the Deposit Securities and/or the payment of the Cash Component have been completed. When the required Deposit Securities (or the cash value thereof) have been delivered to the account of a Fund at the Custodian, the Trust will issue and cause the delivery of the Creation Units. The delivery of Creation Units so created generally will occur no later than the Settlement Date. However, the Trust reserves the right to settle Creation Unit transactions on a basis other than the second Business Day following the day on which the purchase order is deemed received by the Distributor in certain circumstances. The Authorized Participant shall be liable to a Fund for losses, if any, resulting from unsettled orders.

Creation Units may be purchased in advance of receipt by the Trust of all or a portion of the applicable Deposit Securities as described below. In these circumstances, the initial deposit will have a value greater than the NAV of the shares of the applicable Fund on the date the order is placed in proper form since in addition to available Deposit Securities, cash must be deposited in an amount equal to the sum of (i) the Cash Component, plus (ii) an additional amount of cash equal to a percentage of the market value as set forth in the Participant Agreement, of the undelivered Deposit Securities (the “**Additional Cash Deposit**”), which shall be maintained in a separate non-interest bearing collateral account. The Authorized Participant must deposit with the Custodian the Additional Cash Deposit, as applicable, by the time set forth in the Participant Agreement on the Settlement Date. If a Fund or its agents do not receive the Additional Cash Deposit in the appropriate amount, by such time, then the order may be deemed rejected and the Authorized Participant shall be liable to the Fund for losses, if any, resulting therefrom. An additional amount of cash shall be required to be deposited with the Trust, pending delivery of the missing Deposit Securities to the extent necessary to maintain the Additional Cash Deposit with the Trust in an amount at least equal to the applicable percentage, as set forth in the Participant Agreement, of the daily marked to market value of the missing Deposit Securities. The Trust may use such Additional Cash Deposit to buy the missing Deposit Securities at any time. Authorized Participants will be liable to the Trust for all costs, expenses, dividends, income, and taxes associated with missing Deposit Securities, including the costs incurred by the Trust in connection with any such purchases. These costs will be deemed to include the amount by which the actual purchase price of the Deposit Securities exceeds the value of such Deposit Securities on the day the purchase order was deemed received by the Distributor plus the brokerage and related transaction costs associated with such purchases. The Trust will return any unused portion of the Additional Cash Deposit once all of the missing Deposit Securities have been properly received by the Custodian or purchased by the Trust and deposited into the Trust. In addition, a creation transaction fee as set forth below under “Creation Transaction Fee” may be charged and an additional variable charge may also apply. The delivery of Creation Units so created generally will occur no later than the Settlement Date.

Acceptance of Orders of Creation Units. The Trust reserves the right to reject an order for Creation Units transmitted to it by the Distributor in respect of a Fund for any legally permissible reason including, without limitation, if (a) the order is not in proper form; (b) the Deposit Securities or Additional Cash Deposit delivered by the Authorized Participant are not as disseminated through the facilities of the NSCC for that date by the Custodian; (c) the investor(s), upon obtaining the Shares ordered, would own 80% or more of the currently outstanding Shares of the Fund; (d) the acceptance of the Fund Deposit would, in the opinion of counsel, be unlawful; (e) the acceptance or receipt of the order for a Creation Unit would, in the opinion of counsel to the Trust, be unlawful; or (f) circumstances outside the control of the Trust, the Custodian, the Transfer Agent and/or the Adviser make it for all practical purposes not feasible to process orders for Creation Units. Examples of such circumstances include, but are not limited to, acts of God or public service or utility problems such as fires, floods, extreme weather conditions and power outages resulting in telephone, telecopy and computer failures; market conditions or activities causing trading halts; systems failures involving computer or other information systems affecting the Trust, the Distributor, the Custodian, the Transfer Agent, DTC, NSCC, Federal Reserve System, or any other participant in the creation process, and other extraordinary events. Given the importance of the ongoing issuance of Creation Units to maintaining a market price that is at or close to the underlying net asset value of a Fund, the Trust does not intend to suspend acceptance of orders for Creation Units.

The Distributor shall notify the Authorized Participant or the AP Representative acting on behalf of the Authorized Participant of its rejection of the order of such person. The Trust, the Transfer Agent, the Custodian, and the Distributor are under no duty, however, to give notification of any defects or irregularities in the delivery of Fund Deposits nor shall any of them incur any liability for the failure to give any such notification. The Trust, the Transfer Agent, the Custodian and the Distributor shall not be liable for the rejection of any purchase order for Creation Units.

All questions as to the number of shares of each security in the Deposit Securities and the validity, form, eligibility and acceptance for deposit of any securities to be delivered shall be determined by the Trust, and the Trust's determination shall be final and binding.

Creation Transaction Fee. A fixed purchase (i.e., creation) transaction fee may be imposed for the transfer and other transaction costs associated with the purchase of Creation Units ("**Creation Order Costs**"). The standard creation transaction fee for each Fund, regardless of the number of Creation Units created in the transaction, is set forth in the table below.

| Fund | Standard In-Kind Creation Transaction Fee |
|----------------------------|--|
| Opportunistic Bond ETF | \$250 |
| Commercial Real Estate ETF | \$250 |
| Mortgage ETF | \$250 |
| Equities ETF | \$250 |

Each Fund may adjust the creation transaction fee from time to time. The Adviser or other Fund service provider may pay out of its own resources and not out of Fund assets, a portion or all of such creation transaction fee from time to time in its sole discretion. Any such fees and/or payments may impact bid/ask spreads. The creation transaction fee may be waived on certain orders if the Custodian has determined to waive some or all of the Creation Order Costs associated with the order or another party, such as the Adviser, has agreed to pay such fee.

In addition, a variable fee may be imposed for cash purchases, non-standard orders, or partial cash purchases of Creation Units. The variable fee is primarily designed to cover non-standard charges, e.g., brokerage, taxes, execution, market impact, and other costs and expenses, related to the execution of trades resulting from such transaction. In all cases, such fees will be limited in accordance with the requirements of the SEC applicable to

management investment companies offering redeemable securities. Each Fund may determine not to charge a variable fee on certain orders when the Adviser has determined that doing so is in the best interests of Fund shareholders (e.g., for creation orders that facilitate the rebalance of the Fund's portfolio in a more efficient manner than could have been achieved without such order).

Investors who use the services of an Authorized Participant, broker or other such intermediary may be charged a fee for such services which may include an amount for the creation transaction fee and non-standard charges. Investors are responsible for the costs of transferring the securities constituting the Deposit Securities to the account of the Trust. The Adviser may retain all or a portion of the transaction fee to the extent the Adviser bears the expenses that otherwise would be borne by the Trust in connection with the issuance of a Creation Unit, which the transaction fee is designed to cover.

Risks of Purchasing Creation Units. There are certain legal risks unique to investors purchasing Creation Units directly from a Fund. Because the Funds' shares may be issued on an ongoing basis, a "distribution" of shares could be occurring at any time. Certain activities that a shareholder performs as a dealer could, depending on the circumstances, result in the shareholder being deemed a participant in the distribution in a manner that could render the shareholder a statutory underwriter and subject to the prospectus delivery and liability provisions of the Securities Act. For example, a shareholder could be deemed a statutory underwriter if it purchases Creation Units from a Fund, breaks them down into the constituent shares, and sells those shares directly to customers, or if a shareholder chooses to couple the creation of a supply of new shares with an active selling effort involving solicitation of secondary-market demand for shares. Whether a person is an underwriter depends upon all of the facts and circumstances pertaining to that person's activities, and the examples mentioned here should not be considered a complete description of all the activities that could cause an investor to be deemed an underwriter.

Dealers who are not "underwriters" but are participating in a distribution (as opposed to engaging in ordinary secondary-market transactions), and thus dealing with a Fund's shares as part of an "unsold allotment" within the meaning of Section 4(a)(3)(C) of the Securities Act, will be unable to take advantage of the prospectus delivery exemption provided by Section 4(a)(3) of the Securities Act.

Redemption. Shares of a Fund may be redeemed only in Creation Units at their NAV next determined after receipt of a redemption request in proper form by the Fund through the Transfer Agent and only on a Business Day. EXCEPT UPON LIQUIDATION OF A FUND, THE TRUST WILL NOT REDEEM SHARES IN AMOUNTS LESS THAN CREATION UNITS. Investors must accumulate enough shares of a Fund in the secondary market to constitute a Creation Unit in order to have such shares redeemed by the Trust. There can be no assurance, however, that there will be sufficient liquidity in the public trading market at any time to permit assembly of a Creation Unit. Investors should expect to incur brokerage and other costs in connection with assembling a sufficient number of shares to constitute a redeemable Creation Unit.

Each Business Day, prior to the opening of trading on the Exchange (currently 9:30 a.m., Eastern time), the Custodian will transmit to each AP Representative the identity and the required number of each Fund Security and, as applicable and under the circumstances described below, the cash value of the Fund Securities that will be applicable to redemption requests for that day, and the amount of the Cash Redemption Amount (as defined below) (if any).

In-Kind Redemption Method. Redemption proceeds for a Creation Unit are paid in-kind, in cash, or combination thereof, as determined by the Trust. With respect to in-kind redemptions of a Fund, redemption proceeds for a Creation Unit will consist of Fund Securities, as announced by the Custodian on the Business Day of the request for redemption received in proper form plus cash in an amount equal to the difference between the NAV of the shares of the Fund being redeemed, as next determined after a receipt of a request in proper form, and the value of Fund Securities (the "**Cash Redemption Amount**"), less any fixed redemption transaction fee as set forth below and any applicable additional variable charge as set forth below. In the event that the Fund's securities have a value greater than the NAV of the shares of the Fund, the Cash Redemption Amount equal to the differential is required to be made by the Authorized Participant to the Fund.

Cash Redemption Method. Redemptions of Creation Units may be made in whole or in part on a cash basis, rather than in kind, solely under the following circumstances: (a) to the extent there is a Cash Redemption Amount; (b) if, on a given Business Day, a Fund announces before the open of trading that all purchases, all redemptions or all purchases and redemptions on that day will be made entirely in cash; (c) if, upon receiving a redemption order from an Authorized Participant, a Fund determines to require the redemption to be made entirely in cash; (d) if, on a given Business Day, a Fund requires all Authorized Participants redeeming shares on that day to receive cash in lieu of some or all of the Fund Securities, solely because such instruments are not eligible for transfer either through the NSCC or DTC; or (e) if a Fund permits an Authorized Participant to receive cash in lieu of some or all of the Fund Securities solely because such instruments are not eligible for trading by an Authorized Participant.

Redemption Transaction Fee. A fixed redemption transaction fee may be imposed for the transfer and other transaction costs associated with the redemption of Creation Units (“**Redemption Order Costs**”). The standard redemption transaction fee for each Fund, regardless of the number of Creation Units redeemed in the transaction, is set forth in the table below.

| Fund | Standard In-Kind Redemption Transaction Fee |
|----------------------------|--|
| Opportunistic Bond ETF | \$250 |
| Commercial Real Estate ETF | \$250 |
| Mortgage ETF | \$250 |
| Equities ETF | \$250 |

Each Fund may adjust the redemption transaction fee from time to time. The Adviser or other Fund service provider may pay out of its own resources and not out of Fund assets, a portion or all of such redemption transaction fee from time to time in its sole discretion. Any such fees and/or payments may impact bid/ask spreads. The redemption transaction fee may be waived on certain orders if the Custodian has determined to waive some or all of the Redemption Order Costs associated with the order or another party, such as the Adviser, has agreed to pay such fee.

In addition, a variable fee, payable to the Fund, may be imposed for cash redemptions, non-standard orders, or partial cash redemptions for a Fund. The variable fee is primarily designed to cover non-standard charges (e.g., brokerage, taxes, execution, market impact, and other costs and expenses, related to the execution of trades resulting from such transaction). In all cases, such fees will be limited in accordance with the requirements of the SEC applicable to management investment companies offering redeemable securities. A Fund may determine not to charge a variable fee on certain orders when the Adviser has determined that doing so is in the best interests of Fund shareholders (e.g., for redemption orders that facilitate the rebalance of the Fund’s portfolio in a more tax efficient manner than could be achieved without such order).

Investors who use the services of an Authorized Participant, broker or other such intermediary may be charged a fee for such services, which may include an amount for the redemption transaction fees and non-standard charges. Investors are responsible for the costs of transferring the securities constituting the Fund Securities to the account of the Authorized Participant. The non-standard charges are payable to a Fund as it incurs costs in connection with the redemption of Creation Units, the receipt of Fund Securities and the Cash Redemption Amount and other transactions costs. The Adviser may retain all or a portion of the redemption transaction fee to the extent the Adviser bears the expenses that otherwise would be borne by the Trust in connection with the redemption of a Creation Unit, which the redemption transaction fee is designed to cover.

Procedures for Redemption of Creation Units. Orders to redeem Creation Units must be submitted in proper form to the Transfer Agent prior to the time as set forth in the Participant Agreement. A redemption request is

considered to be in “proper form” if (i) an Authorized Participant has transferred or caused to be transferred to the Trust’s Transfer Agent the Creation Unit(s) being redeemed through the book-entry system of DTC so as to be effective by the time as set forth in the Participant Agreement and (ii) a request in form satisfactory to the Trust is received by the Transfer Agent from the Authorized Participant on behalf of itself or another redeeming investor within the time periods specified in the Participant Agreement. If the Transfer Agent does not receive the investor’s shares of a Fund through DTC’s facilities by the times and pursuant to the other terms and conditions set forth in the Participant Agreement, the redemption request shall be rejected, unless, to the extent contemplated by the Participant Agreement, collateral is posted in an amount equal to a percentage of the value of the missing shares of that Fund as specified in the Participant Agreement (and marked to market daily).

The Authorized Participant must transmit the request for redemption, in the form required by the Trust, to the Transfer Agent in accordance with procedures set forth in the Participant Agreement. Investors should be aware that their particular broker may not have executed a Participant Agreement, and that, therefore, requests to redeem Creation Units may have to be placed by the investor’s broker through an Authorized Participant who has executed a Participant Agreement. Investors making a redemption request should be aware that such request must be in the form specified by such Authorized Participant. Investors making a request to redeem Creation Units should allow sufficient time to permit proper submission of the request by an Authorized Participant and transfer of the shares of the applicable Fund to the Trust’s Transfer Agent; such investors should allow for the additional time that may be required to effect redemptions through their banks, brokers or other financial intermediaries if such intermediaries are not Authorized Participants.

Additional Redemption Procedures. In connection with taking delivery of shares of Fund Securities upon redemption of Creation Units, a redeeming shareholder or Authorized Participant acting on behalf of such shareholder must maintain appropriate custody arrangements with a qualified broker-dealer, bank or other custody providers in each jurisdiction in which any of the applicable Fund’s securities are customarily traded, to which account such Fund Securities will be delivered. Deliveries of redemption proceeds generally will be made within two Business Days of the trade date. However, in certain circumstances, the delivery of in-kind redemption proceeds may take longer than two Business Days after the day on which the redemption request is received in proper form.

Pursuant to the Participant Agreement, an Authorized Participant submitting a redemption request is deemed to make certain representations to the Trust regarding the Authorized Participant’s ability to tender for redemption the requisite number of shares of the Funds. The Trust reserves the right to verify these representations at its discretion, but will typically require verification with respect to a redemption request from a Fund in connection with higher levels of redemption activity and/or short interest in the Fund. If the Authorized Participant, upon receipt of a verification request, does not provide sufficient verification of its representations as determined by the Trust, the redemption request will not be considered to have been received in proper form and may be rejected by the Trust.

Redemptions of shares for Fund Securities will be subject to compliance with applicable federal and state securities laws and each Fund (whether or not it otherwise permits cash redemptions) reserves the right to redeem Creation Units for cash to the extent that the Trust could not lawfully deliver specific Fund Securities upon redemptions or could not do so without first registering the Fund Securities under such laws, subject to the requirements of the Order with respect to the Equities ETF. An Authorized Participant or an investor for which it is acting subject to a legal restriction with respect to a particular security included in the Fund Securities applicable to the redemption of Creation Units may be paid an equivalent amount of cash. The Authorized Participant may request the redeeming investor of the shares of a Fund to complete an order form or to enter into agreements with respect to such matters as compensating cash payment. Further, an Authorized Participant that is not a “qualified institutional buyer,” (“**QIB**”) as such term is defined under Rule 144A of the Securities Act, will not be able to receive Fund Securities that are restricted securities eligible for resale under Rule 144A. An Authorized Participant may be required by the Trust to provide a written confirmation with respect to QIB status in order to receive Fund Securities.

The right of redemption may be suspended or the date of payment postponed with respect to a Fund (1) for any period during which the New York Stock Exchange is closed (other than customary weekend and holiday closings); (2) for any period during which trading on the New York Stock Exchange is suspended or restricted; (3) for any period during which an emergency exists as a result of which disposal of the securities owned by the Fund or determination of the NAV of the shares is not reasonably practicable; or (4) in such other circumstance as is permitted by the SEC.

BROKERAGE, ALLOCATION AND OTHER TRADING PRACTICES

The Adviser is responsible for the placement of the Funds' portfolio transactions and, with respect thereto, the negotiation of prices, brokerage commissions, if any, and mark-ups and mark-downs or spreads on principal transactions. The Adviser may also purchase securities on behalf of the Funds in underwritten offerings at fixed prices that include discounts to underwriters and/or concessions to dealers.

In placing a portfolio transaction, the Adviser seeks to achieve best execution. This means that, in selecting broker-dealers to execute portfolio transactions for the Funds, the Adviser seeks to select broker-dealers that will execute securities transactions in a manner such that the total cost or proceeds of each transaction is the most favorable under the circumstances. This does not mean, however, that portfolio transactions are always executed at the lowest available commission or spread, and the Adviser may effect transactions that cause a Fund to pay a commission or spread in excess of a commission or spread that another broker-dealer would have charged if the Adviser determines that, notwithstanding such commission or spread, such transaction is in the Fund's best interest. In making this determination, the Adviser may take a variety of factors into consideration, including, without limitation, (i) execution quality in light of order size, difficulty of execution and other relevant factors; (ii) associated expenses and costs; (iii) the quality, reliability, responsiveness and value of the provided services; (iv) the operational compatibility between the broker-dealer and the Adviser; (v) the broker-dealer's safety and soundness; and (vi) the provision of research and brokerage products and services. The provision of research and brokerage products and services is not typically considered in respect of transactions by the Funds when trading fixed income securities.

From time to time, the Adviser receives unsolicited research from various brokers, which may or may not be counterparties to trades placed on behalf of clients. While the Adviser may review and consider certain of the research received, the provision of unsolicited research does not factor into the Adviser's broker selection process with respect to trading fixed-income securities. Research services include items such as reports on industries and companies, economic analyses, review of business conditions and portfolio strategy and various trading and quotation services. Such services also include advice from broker-dealers as to the value of securities, availability of securities, availability of buyers, and availability of sellers. These services also include recommendations as to purchase and sale of individual securities and timing of transactions.

Investment decisions for the Funds and for the other investment advisory clients of the Adviser are made with a view to achieving their respective investment objectives. Investment decisions are the product of many factors in addition to basic suitability for the particular client involved (including the Funds). Some securities considered for investment by the Funds also may be appropriate for other clients served by the Adviser. Thus, a particular security may be bought or sold for certain clients even though it could have been bought or sold for other clients at the same time, including accounts in which the Adviser, its officers or employees may have a financial interest. If a purchase or sale of securities consistent with the investment policies of a Fund and one or more of these clients served by the Adviser is considered at or about the same time, transactions in such securities will be allocated among the Fund and other clients pursuant to the Adviser's trade allocation policy that is designed to ensure that all accounts, including the Funds, are treated fairly and equitably over time.

As of the date of this SAI, the Adviser does not expect to cause the Funds to pay brokers or dealers amounts of commissions for effecting portfolio investment transactions that are in excess of the amount of commission that another broker or dealer would have charged for effecting transactions to compensate the brokers or dealers for

“brokerage and research services” (as defined in the Securities Exchange Act of 1934, as amended (the “**Exchange Act**”)) or to accumulate credits to purchase such services. The Adviser may modify its practice in this regard without prior notice to shareholders and, in the event the Adviser does so, the following disclosure regarding such practices shall apply.

As permitted by Section 28(e) of the Exchange Act, the Adviser may, on behalf of a client, pay a broker or dealer, including those acting in the capacity of a futures commission merchant, that provides “brokerage and research services” (as defined in the Exchange Act) to the Adviser an amount of commission for effecting a portfolio investment transaction in excess of the amount of commission that another broker or dealer would have charged for effecting that transaction, if the Adviser determines in good faith that such amount of commission was reasonable in relation to the value of the brokerage and research services provided by such broker or dealer, viewed in terms of either that particular transaction or the Adviser’s overall responsibilities to the client and to other client accounts over which the Adviser exercises investment discretion. Such research services include proprietary research created internally by a broker or by a third-party provider (and made available to the Adviser by a broker) such as, for example, individual stock information and research, industry and sector analysis, trend analysis and forecasting, discussions with individual stock analysts, and meetings arranged with various sources of information regarding particular issuers, industries, governmental policies, specific information about local markets and applicable regulations, economic trends, and other matters. In addition, a broker may accumulate credits for the Adviser’s account and use them to purchase brokerage and research services at the Adviser’s discretion and based on the Adviser’s determination of the relative benefits of the various services available for purchase. These arrangements are commonly known as “commission sharing arrangements.” Accordingly, the Adviser’s clients may be deemed to be paying for research and these other services with “soft” or commission dollars. Research furnished by brokers or dealers or pursuant to credits accumulated at brokers or dealers through commission sharing arrangements may be used in servicing any or all of the Adviser’s clients and may be used for client accounts other than those that pay commissions to the broker or dealer providing the research. The Adviser also may receive soft dollar credits based on certain “riskless” principal securities transactions with brokerage firms. With respect to certain products and services used for both research/brokerage and non-research/brokerage purposes, the Adviser generally allocates the costs of such products and services between their research/brokerage and non-research/brokerage uses, and generally uses soft dollars to pay only for the portion allocated to research/brokerage uses. Examples of products and services used for non-research/brokerage purposes (and not paid for with soft dollars) include equipment and exchange data (*e.g.*, quotes, volume). Some of these services may be of value to the Adviser and its related parties in advising various of its clients (including the Funds), although not all of these services are necessarily useful and of value in managing the Funds. The management fee paid by a Fund is not reduced because the Adviser or its related parties receive these services even though the Adviser might otherwise be required to purchase some of these services for cash. The Adviser’s authority to cause a Fund to pay any such greater commissions is also subject to such policies as the Trustees may adopt from time to time.

The Adviser’s relationships with brokerage firms that provide soft dollar services to the Adviser (including brokerage firms that participate in commission sharing arrangements) may influence the Adviser’s judgment and create conflicts of interest, both in allocating brokerage business between firms that provide soft dollar services and firms that do not, and in allocating the costs of mixed-use products between their research and non-research uses. When the Adviser uses client brokerage commissions to obtain research or other products or services, the Adviser receives a benefit because it does not have to produce or pay for such research, products, or services. As such, that Adviser has an incentive to select or recommend a broker-dealer based on the Adviser’s interest in receiving the research or other products or services, rather than on the Adviser’s clients’ interest in receiving most favorable execution. Client trades executed through these brokers or any other brokerage firm may not be at the lowest price otherwise available. The Adviser maintains policies and procedures designed to address such conflicts of interest.

Aggregated Transactions. In an effort to achieve efficiencies in execution and reduce trading costs, the Adviser and its related parties may, but will not necessarily, aggregate securities transactions on behalf of a number of

accounts, including accounts of the Funds, at the same time. In addition, the Adviser may execute securities transactions alongside or interspersed between aggregated orders when the Adviser believes that such execution will not interfere with its ability to execute in a manner believed to be most favorable to its clients as a whole. The Adviser may exclude trades for accounts that direct brokerage or that are managed in part for tax considerations from aggregate orders.

When executing aggregate orders, trades will be allocated among accounts using procedures that the Adviser considers to be reasonably designed to be non-preferential and fair and equitable over time. This may include making the allocation on a *pro rata* basis or on a non-*pro rata* basis based on various factors, including liquidity requirements, reserves and cash flow considerations; diversification requirements; portfolio duration; amount of capital available for investment by a client, including new clients, as well as projected future capacity for investment; variance of the portfolio from models, target weights or indexes; risk management considerations; the size of the investment relative to the size of the account; client-specific industry and other allocation targets, including each account's target average credit quality, liquidity, sector targets, and composition; minimum and maximum investment size requirements; tax considerations; legal, contractual, or regulatory constraints specific to or imposed by a client; and any other relevant limitations imposed by or conditions set forth in the applicable offering or other organizational documents of a client.

The Adviser shares allocations of public offerings and other desirable but limited opportunities to buy or sell securities in a manner that the Adviser considers reasonably designed to be non-preferential and fair and equitable over time, such that no account or group of accounts receives consistently favorable or unfavorable treatment. Generally, such allocations will be made after taking into account cash availability and need, suitability, investment objectives and guidelines and other factors deemed appropriate in making investment allocation decisions for each client. Shares obtained in IPOs will be allocated using these criteria unless the number of shares made available to the Adviser is *de minimis*, in which case, the shares will be allocated among the eligible accounts based on the Adviser's assessment of the circumstances.

In addition, and particularly with respect to fixed-income securities, if a small amount of an investment is allocated to the Adviser, the Adviser may allocate it disproportionately, taking into consideration, among other things, lot size, existing or targeted account weightings in particular securities and/or sectors, account size, diversification requirements and investment objectives/restrictions.

The table below shows the aggregate dollar amount of brokerage commissions paid by each Fund for the fiscal year ended September 30, 2023. Changes in the amounts of brokerage commissions from year to year are generally the result of active trading strategies employed by the Funds' investment teams in response to market conditions, changes in the total assets of a Fund, and/or a determination by the Adviser to engage in brokerage practices as described above.

| Fund | Brokerage Commissions Paid | Market Value of Transactions Involved |
|-----------------------------|-----------------------------------|--|
| Opportunistic Bond ETF | \$0 | \$0 |
| Commercial Real Estate ETF* | \$0 | \$0 |
| Mortgage ETF* | \$169 | \$9,392,947 |
| Equities ETF | \$66,264 | \$1,217,511,535 |

* The Funds commenced operations on March 31, 2023.

Certain diligence-related transaction costs. The Adviser may aggregate a Fund's order for an investment in, or sale of, an interest in certain instruments, including, for example, a subordinated tranche CMBS, including investments at original issuance, or certain loan instruments, with orders of one or more other DoubleLine funds or other DoubleLine accounts. Certain diligence-related or structuring costs and expenses will be allocated to all of the accounts, including any Funds, participating in the aggregated transaction *pro rata* based on the size of the

accounts considering the investment opportunity or the amount of investment made by each account participating in the transaction. Each Fund's participation in any such aggregated transaction will be subject to a number of conditions intended to result in the fair and equitable treatment of each participating account, including each Fund. For example, where the Adviser aggregates a Fund's order for an investment in, or sale of, an interest in a subordinated tranche CMBS with orders of one or more Funds or other DoubleLine accounts, a Fund will not incur diligence- or structuring-related expenses in connection with any such transaction in excess of 0.50% of the value of the Fund's investment in the structured product without the Fund's Board of Trustees approval of those expenses. The Adviser may advance diligence- or structuring-related expenses relating to a transaction on behalf of a Fund and seek to receive reimbursement (without interest) of any such expenses advanced on behalf of a participating Fund from that Fund at a later date. A Fund may incur diligence-related expenses in connection with the evaluation of investment opportunities that the Adviser ultimately determines not to pursue on behalf of the Fund. In some cases, the diligence- or structuring-related expenses that would otherwise be incurred by a Fund or the Adviser may be borne by the sponsor or seller of an investment.

Directed Brokerage. For the fiscal year ended September 30, 2023, the Funds did not participate in any directed brokerage.

Regular Broker-Dealers. As of the close of the fiscal year ended September 30, 2023, the Funds listed below owned securities of their "regular broker-dealers" (as defined by Rule 10b-1 under the 1940 Act) or of their parents. (Generally, a regular broker or dealer of an investment company is one of the ten brokers or dealers that received the greatest dollar amount of brokerage commissions from participating in portfolio transactions, engaged as principal in the largest dollar amount of portfolio transactions, or sold the largest dollar amount of portfolio securities during the Fund's most recent fiscal year). The table below sets out the name of the broker or dealer (and, if applicable, parent) and the aggregate value of the securities of the regular broker or dealer (or parent) held by the respective Fund as of September 30, 2023.

| Name of Fund | Regular Broker-Dealer | Aggregate Holdings (000s) |
|------------------------|-------------------------------|---------------------------|
| Opportunistic Bond ETF | BofA Securities, Inc. | \$529,185 |
| | Citigroup Global Markets Inc. | \$397,360 |
| | Goldman Sachs & Co. LLC | \$540,181 |
| | J.P. Morgan Securities LLC | \$652,667 |
| | Morgan Stanley & Co. LLC | \$472,630 |
| | Wells Fargo Securities, LLC | \$416,665 |
| Equities ETF | BofA Securities, Inc. | \$2,915,422 |
| | Citigroup Global Markets Inc. | \$1,219,875 |
| | J.P. Morgan Securities LLC | \$6,491,095 |
| | Morgan Stanley & Co. LLC | \$1,604,979 |

TRUSTEES AND OFFICERS

The Board of Trustees of the Trust (the "**Board**" or the "**Trustees**") consists of six Trustees, four of whom are not considered to be "interested persons" (as defined in the 1940 Act) of the Trust (the "**Independent Trustees**"). The Board is responsible for overseeing the management and operations of the Trust, including general supervision of the duties performed by the Adviser and other service providers to the Trust. The Adviser and the Trust's administrator are responsible for the day-to-day management and administration of the Trust.

Mr. Jeffrey E. Gundlach, Trustee, serves as Chairman of the Board and is an interested person of the Trust. Mr. Ronald R. Redell serves as a Trustee and is an interested person of the Trust.

Mr. John C. Salter serves as the lead Independent Trustee of the Trust. A portion of each regular meeting of the Board is devoted to an executive session of the Independent Trustees at which no members of management or the Trust's administrator are present. At those meetings, the Independent Trustees consider a variety of matters that are required by law to be considered by the Independent Trustees, as well as matters that are scheduled to come before the full Board of Trustees, including fund governance, fund management, and leadership issues, and are advised by independent legal counsel. Mr. Salter serves as Chair for those meetings.

The Board has an Audit Committee consisting of the Trustees who are Independent Trustees. Mr. Salter serves as the Chairman of the Audit Committee. The Audit Committee's other members are Messrs. Ciprari, Friedman and Odell. The Board has determined that each member of its Audit Committee is financially literate and that at least one of its members has prior accounting or related financial management experience. The Audit Committee makes recommendations to the Board concerning the selection of the independent auditors and reviews with the auditors the results of the annual audit, including the scope of auditing procedures, the adequacy of internal controls and compliance by the Trust with the accounting and financial reporting requirements of the 1940 Act. The Audit Committee is also responsible for: (i) the receipt, retention and treatment of complaints regarding accounting, internal accounting controls or auditing matters; and (ii) the confidential, anonymous submission by employees of the listed issuer of concerns regarding questionable accounting or auditing matters in accordance with Section 301 of the Sarbanes-Oxley Act. As further discussed below, Mr. Woolson has been retained as a consultant to the Independent Trustees, including the members of the Audit Committee. The Chief Compliance Officer of the Trust is currently the "designated persons" to whom any written complaints and concerns should be reported. The Audit Committee met four times during the fiscal year ended September 30, 2023.

The Board has a Nominating and Governance Committee consisting of the Trustees who are Independent Trustees. The members of the Nominating Committee are Messrs. Ciprari, Friedman, Odell and Salter. The Nominating and Governance Committee makes recommendations to the Board regarding nominations for membership on the Board as an independent trustee. Based on, among other things, information provided by management of the Trust, the Nominating and Governance Committee periodically reviews trustee compensation and recommends any changes it deems appropriate to the Independent Trustees. The Nominating and Governance Committee will also consider potential trustee candidates recommended by shareholders provided that the proposed candidates satisfy the trustee qualification requirements provided in the Trust's Declaration of Trust, as amended, and the Trust's other governing documents. The Nominating and Governance Committee did not meet during the fiscal year ended September 30, 2023.

The Adviser has a Valuation Sub-Committee that, among other things, implements or oversees certain aspects of the Funds' Pricing and Valuation Policy and assists the Adviser, as the Board's valuation designee, for purposes of fair valuing securities pursuant to Rule 2a-5 under the 1940 Act. The Valuation Sub-Committee consists of one or more employees of the Adviser, who have been designated by the Board to make fair value determinations on a day-to-day basis with respect to Fund holdings when market prices are not readily available or are considered unreliable in accordance with Board approved valuation procedures. The Audit Committee is responsible for overseeing the fair value determination process and the performance of the Adviser in its capacity as the Board's valuation designee.

The Board believes that each Trustee's experience, qualifications, attributes or skills on an individual basis and in combination with those of the other Trustees on the Board lead to the conclusion that the Board possesses the requisite skills and attributes to carry out its oversight responsibilities with respect to the Trust. The Board believes that its Trustees' ability to review, critically evaluate, question, and discuss information provided to them, to interact effectively with the Adviser, other service providers, counsel and independent auditors, and to exercise effective business judgment in the performance of its duties, support this conclusion. The Board also has considered the following experience, qualifications, attributes and/or skills, among others, of its members in reaching its conclusion: (i) such person's business and professional experience and accomplishments, including prior experience in the financial services and investment management fields or on other boards; (ii) such person's ability to work effectively with the other members of the Board; (iii) how the individual's skills, experiences, and

attributes would contribute to an appropriate mix of relevant skills and experience on the Board; (iv) such person's character and integrity; (v) such person's willingness to serve and willingness and ability to commit the time necessary to perform the duties of a Trustee; and (vi) as to each Trustee other than Messrs. Gundlach and Redell, his status as an Independent Trustee. In addition, the following specific experience, qualifications, attributes and/or skills were considered in respect of the listed Trustee: Mr. Ciprari, significant experience serving in the investment banking industry and as a senior executive at an investment bank; Mr. Friedman, significant experience serving in the investment banking industry and as a senior executive at an investment bank, specializing in institutional fixed income products; Mr. Odell, significant experience and familiarity with securities markets and financial services distribution through various positions held at a large financial institution; Mr. Salter, significant experience and familiarity with securities markets and financial matters generally; Mr. Gundlach, significant experience and service in the investment management industry and as a senior executive at an investment advisory firm; Mr. Redell, significant experience and service in the investment management industry as a senior executive at an investment advisory firm; and with respect to each Trustee, significant experience and service as a trustee of other DoubleLine funds. References to the experience, qualifications, attributes, and skills of Trustees are pursuant to requirements of the SEC, do not constitute holding out of the Board or any Trustee as having any special expertise or experience, and shall not impose any greater responsibility or liability on any such person or on the Board by reason thereof.

The Board has determined that its leadership structure is appropriate given the business and nature of the Trust, including (i) the extensive oversight provided by the Adviser, of which Mr. Redell is an executive; (ii) the substantial investment experience of Mr. Gundlach; (iii) the substantial industry leadership experience of Mr. Redell; (iv) the extent to which the Independent Trustees meet as needed, together with their independent legal counsel, in the absence of members of management and members of the Board who are interested persons of the Trust; and (v) the leadership role of the lead Independent Trustee. The Board expects to review its structure on an annual basis.

In its oversight role, the Board and/or its Committees receive and review reports from the relevant Funds' officers, including, but not limited to, the President, Chief Compliance Officer and Treasurer, DoubleLine portfolio management personnel and other senior personnel of the Funds' Adviser, the Funds' independent registered public accounting firm, and the Funds' third-party service providers with respect to a variety of matters, including matters that relate to the operations of the Funds, including related risks. From time to time, the Board of each Fund may engage the services of independent consultants or advisors at the Fund's expense. DoubleLine Opportunistic Credit Fund, DoubleLine Income Solutions Fund, DoubleLine Yield Opportunities Fund and each series of both DoubleLine Funds Trust and DoubleLine ETF Trust (collectively, the "DoubleLine Funds") have retained Mr. Raymond B. Woolson, a former independent trustee of the DoubleLine Funds with significant financial consulting, fund accounting, and fund administration experience and institutional knowledge, as a consultant to the independent trustees of the DoubleLine Funds on matters relating to the operation of the DoubleLine Funds and their respective boards of trustees and board committees. During his tenure as a trustee of the DoubleLine Funds, Mr. Woolson served as Lead Independent Trustee of the Boards, Chair of the Audit Committee of the Boards, and served as an Audit Committee Financial Expert.

The function of the Board with respect to risk management is one of periodic oversight and not active involvement in, or coordination of, day-to-day risk management activities for the Trust. Each Adviser's personnel seek to identify and address risks, *i.e.*, events or circumstances that could have material adverse effects on the business, operations, shareholder services, investment performance or reputation of a Fund. Under the general oversight of the Board or the applicable Committee of the Board, the Trust, and each Adviser and other service providers to the Trust employ a variety of processes, procedures, and controls to identify such possible events or circumstances, to lessen the probability of their occurrence and/or to mitigate the effects of such events or circumstances if they do occur. The Board recognizes, however, that not all risks that may affect a Fund can be identified, that it may not be practical or cost-effective to eliminate or mitigate certain risks, that it may be necessary to bear certain risks (such as investment-related risks) to achieve a Fund's goals, and that the processes, procedures, and controls employed to address certain risks may be limited in their effectiveness.

Moreover, reports received by the Trustees that may relate to risk management matters are typically summaries of the relevant information. There is no assurance that the Board of Trustees' operations or leadership structure will identify, prevent, or mitigate risks in actual practice.

The name, year of birth, and principal occupations for the past five years of the Trustees and officers of the Funds are listed below, along with the number of portfolios in the fund complex overseen and the other directorships held by each Trustee. The business address for each Trustee is c/o DoubleLine ETF Trust, 2002 North Tampa Street, Suite 200, Tampa, Florida 33602.

Independent Trustees

| Name and Year of Birth | Position with Trust | Term of Office and Length of Time Served | Principal Occupation(s) During Past 5 Years | Number of Portfolios in Fund Complex Overseen by Trustee⁽¹⁾ | Other Directorships Held by Trustee During Past 5 Years |
|-----------------------------------|----------------------------|---|---|---|--|
| Joseph J. Ciprari 1964 | Trustee | Indefinite/Since September 2023 | Executive Vice President, Pointivo, Inc., a software development firm. Trustee Interest in Adviser, Distributor or Affiliates

As of the end of the most recently completed calendar year, neither the Independent Trustees nor members of their immediate families own or have owned securities beneficially or of record in the Adviser, Foreside Fund Services, LLC (the “**Distributor**”), or any related party of the Adviser or Distributor during the past two calendar years. As of the end of the most recently completed calendar year, neither the Independent Trustees nor members of their immediate families, have or had a direct or indirect interest, the value of which exceeds \$120,000 in the Adviser, the Distributor, or any of their affiliates during the past two calendar years.

| Name of Trustee | Name of Owners and Relationship to Trustee | Company | Title of Class | Value of Securities | Percentage of Class |
|------------------------|---|----------------|-----------------------|----------------------------|----------------------------|
| Yury Friedman | None | None | None | None | None |
| William A. Odell | None | None | None | None | None |
| Joseph J. Ciprari* | None | None | None | None | None |
| John C. Salter* | None | None | None | None | None |

* Messrs. Ciprari and Salter joined the Board on September 19, 2023.

Trustee Material Interest in Any Transactions with Advisers, Distributor or Affiliates

During the two most recently completed calendar years, neither the Independent Trustees nor members of their immediate family, have conducted any transactions (or series of transactions) in which the amount involved exceeds \$120,000 and to which an Adviser, the Distributor, or any affiliate of an Adviser or Distributor was a party.

Compensation of Independent Trustees

The following table shows the annual compensation, effective as of November 14, 2023, payable to each current Trustee who is not an employee of the Adviser or its affiliates or related parties for his services as Trustee of the Trust, DoubleLine Funds Trust, DoubleLine Opportunistic Credit Fund, DoubleLine Income Solutions Fund, and DoubleLine Yield Opportunities Fund and, if applicable, the compensation paid to a Trustee for his service as the Audit Committee Chair and/or the lead Independent Trustee (such compensation being in addition to the fees received for serving on the Board) of the Board of the Trust, DoubleLine Funds Trust, DoubleLine Opportunistic Credit Fund, DoubleLine Income Solutions Fund, and DoubleLine Yield Opportunities Fund. The Interested Trustees do not receive any compensation from the Funds for serving as Interested Trustee or officers of the Funds. Compensation is paid on a quarterly basis.

| Position | Annual Compensation from the Funds, the series of DoubleLine Funds Trust, DoubleLine Opportunistic Credit Fund, DoubleLine Income Solutions Fund, and DoubleLine Yield Opportunities Fund |
|--------------------------|--|
| Trustee | \$400,000 |
| Audit Committee Chair | \$21,600 |
| Lead Independent Trustee | \$25,000 |

The Funds will also reimburse the Trustees for travel and other out-of-pocket expenses incurred in connection with attending such meetings of the Trustees.

The following table shows the compensation paid to each current Trustee who is not an employee of an Adviser or its affiliates or related parties for his services as Trustee of the Trust for the fiscal year ended September 30, 2023.

| Aggregate Compensation from the Funds | | | | | | |
|--|---|-------------------------|--|-------------------------------------|--|---------------------------------------|

1 Messrs. Ciprari and Salter joined the Board on September 19, 2023.

2 Messrs. Gundlach and Redell are Interested Trustees of the Trust.

3 The term “Fund Complex” as used herein includes the Funds, each series of the DoubleLine Funds Trust, DoubleLine Opportunistic Credit Fund, DoubleLine Income Solutions Fund and DoubleLine Yield Opportunities Fund. For the fiscal year ended September 30, 2023, Trustees’ fees and expenses in the amount of \$1,415,000 were incurred by the Fund Complex. Messrs. Friedman, Odell, Ciprari and Salter serve as Independent Trustees of the DoubleLine Funds Trust, a separate trust which offers series of open-end mutual funds, including one fund whose shares are offered on a limited basis and through separate offering materials. Messrs. Friedman, Ciprari and Salter also serve as Independent Trustees of DoubleLine Opportunistic Credit Fund, DoubleLine Income Solutions Fund and DoubleLine Yield Opportunities Fund. Mr. Gundlach serves as an Interested Trustee of the DoubleLine Funds Trust.

Retirement Policy

The Trust has not adopted a retirement policy for their respective Trustees.

Officers

The officers of the Trust who are not also trustees of the Trust are included in the table below. The business address for each officer is c/o DoubleLine ETF Trust, 2002 North Tampa Street, Suite 200, Tampa, Florida 33602.

| Name and Year of Birth | Position(s) Held with Trust | Term of Office and Length of Time Served | Principal Occupation(s) During Past 5 Years |
|--------------------------------|--|--|--|
| Henry V. Chase 1949 | Treasurer and Principal Financial and Accounting Officer | Indefinite/Since November 2021 | Treasurer and Principal Financial and Accounting Officer, DoubleLine ETF Adviser LP (since December 2021); Treasurer and Principal Financial and Accounting Officer, DoubleLine Funds Trust (since January 2020); Treasurer and Principal Financial and Accounting Officer, DoubleLine Yield Opportunities Fund (since January 2020); Treasurer and Principal Financial and Accounting Officer, DoubleLine Income Solutions Fund (since January 2020); Treasurer and Principal Financial and Accounting Officer, DoubleLine Opportunistic Credit Fund (since January 2020); Chief Financial Officer, DoubleLine Capital LP (since January 2013). Formerly, Vice President, DoubleLine Yield Opportunities Fund (since Inception); Vice President, DoubleLine Income Solutions Fund (since May 2019); Vice President, DoubleLine Funds Trust (since May 2019); Vice President, DoubleLine Opportunistic Credit Fund (since May 2019). |
| Youse Guia 1972 | Chief Compliance Officer | Indefinite/Since November 2021 | Chief Compliance Officer, DoubleLine ETF Adviser LP (since December 2021) Chief Compliance Officer, DoubleLine Yield Opportunities Fund (since November 2019); Chief Compliance Officer, DoubleLine Capital LP (since March 2018); Chief Compliance Officer, DoubleLine Funds Trust (since March 2018); Chief Compliance Officer, DoubleLine Opportunistic Credit Fund (since March 2018); Chief Compliance Officer, DoubleLine Income Solutions Fund (since March 2018). Formerly, Executive Vice President and Deputy Chief Compliance Officer, Pacific Investment Management Company LLC (“PIMCO”) (from April 2014 to February 2018); Chief Compliance Officer, PIMCO Managed Accounts Trust (from September 2014 to February 2018); Chief Compliance Officer, PIMCO-sponsored closed-end funds (from |

Formerly, Vice President, Senior Compliance Officer, PIMCO (From April 2016 – February 2022). |
| Carolyn Liu-Hartman 1981 | Secretary | Indefinite/Since November 2021 | Legal/Compliance, DoubleLine Group LP (since June 2020). Formerly, Senior Counsel, Invesco (from May 2019 to June 2020); Vice President and Associate General Counsel, Oppenheimer Funds (from February 2015 to May 2019). |

INVESTMENT ADVISORY AGREEMENT

DoubleLine ETF Trust and the Adviser are parties to an Investment Management Agreement in respect of each Fund (the “**Advisory Agreement**”).

Under the Advisory Agreement, the Trust retains the Adviser to manage the investment of its assets, to place orders for the purchase and sale of its portfolio securities, to administer its day-to-day operations, and to be responsible for overall management of each respective Fund’s business affairs subject to the oversight of the Board of Trustees. The Adviser is responsible for obtaining and evaluating economic, statistical, and financial data and for formulating and implementing investment programs in furtherance of each Fund’s investment objective.

The Adviser furnishes to its respective Funds office space at such places as are agreed upon from time to time and all office facilities, business equipment, supplies, utilities and telephone service necessary for managing the affairs and investments and arranges for officers or employees of the Adviser to serve, without compensation from the Trust, as officers, trustees or employees of the Trust if desired and reasonably required by the Trust.

Each Fund pays a monthly fee to its respective Adviser, calculated at the following annual rate (as a percentage of each Fund's average daily NAV):

| | |
|----------------------------|-------|
| Opportunistic Bond ETF | 0.50% |
| Commercial Real Estate ETF | 0.39% |
| Mortgage ETF | 0.49% |
| Equities ETF | 0.65% |

The Advisory Agreement will continue in effect as to the relevant Fund initially for two years and thereafter from year to year if such continuance is specifically approved at least annually by (a) the Board of Trustees or by the vote of a majority of the outstanding voting securities of the Fund, and (b) vote of a majority of the Trustees who are not interested persons of the Trust or the Adviser (the Independent Trustees), cast in person at a meeting called for the purpose of voting on such approval. The Advisory Agreement may be terminated without penalty at any time on 60 days' written notice, by vote of a majority of the Board of Trustees or by vote of a majority of the outstanding voting securities of the Fund. The Advisory Agreement terminates automatically in the event of its assignment.

The Advisory Agreement also provides that the Adviser shall not be liable to the Trust for any actions or omissions except for liability resulting from its gross negligence, willful misfeasance, bad faith, or from reckless disregard of its duties.

The table below provides the aggregate advisory fees paid to the Adviser by each Fund for the fiscal year ended September 30, 2023:

| Fund | Advisory Fee Paid |
|-----------------------------|-------------------|
| Opportunistic Bond ETF | \$575,012 |
| Commercial Real Estate ETF* | \$62,121 |
| Mortgage ETF* | \$186,288 |
| Equities ETF | \$1,547,526 |

* The Funds commenced operations on March 31, 2023.

CODE OF ETHICS

Both the Trust and the Adviser have adopted a joint code of ethics under Rule 17j-1 of the 1940 Act (the “**Code of Ethics**”). While the Code of Ethics permits personnel subject thereto to invest in securities, including securities that may be purchased or held by the Funds, they also subject such personnel, other than Trustees of the Funds that are not interested persons of the Funds within the meaning of Section 2(a)(19) of the 1940 Act, to a number of procedures and prohibitions with respect to investment activities. These procedures include (1) reporting, including on a quarterly and annual basis, of accounts, position and transaction information, other than positions in certain securities that are excluded from the reporting requirements of Rule 17j-1(d); (2) pre-clearance of securities transactions other than transactions in certain excluded securities and other than certain exclusions based on *de minimis* trade sizes; and (3) a pre-approval requirement with respect to the purchase of any securities in a private placement, initial public offering or limited offering. The Code of Ethics also prohibits the investment by subject personnel in (1) any security on the Adviser's list of restricted securities; (2) uncovered short sales; and (3) uncovered options. Additional restrictions and prohibitions also apply to certain investment personnel subject to the Code of Ethics, including portfolio managers. The Distributor relies on the principal underwriters exception under Rule 17j-1(c)(3), of the 1940 Act, specifically where the Distributor is not affiliated with the Trust or the Adviser, and no officer, director or general partner of the Distributor serves as an officer, director or general partner of the Trust or the Adviser. With respect to the Equities ETF, as required by the Order, the Distributor has adopted a code of ethics under Rule 17j-1 of the 1940 Act.

PROXY VOTING POLICIES

The determination of how to vote proxies relating to a Fund's portfolio securities is made by the Adviser pursuant to its written proxy voting policies and procedures (the "**Proxy Policy**"), which have been adopted pursuant to Rule 206(4)-6 under the Investment Advisers Act of 1940, as amended. The Proxy Policy also applies to any voting rights and/or consent rights on behalf of the portfolio securities, with respect to debt securities, including but not limited to, plans of reorganization, and waivers and consents under applicable indentures.

The Proxy Policy is designed and implemented in a manner reasonably expected to ensure that voting and consent rights are exercised in the best interests of the Funds and their shareholders. To assist DoubleLine in carrying out its proxy voting obligations, on behalf of the Adviser, DoubleLine Group has retained a third-party proxy voting service provider, currently Glass, Lewis & Co. ("**Glass Lewis**"), as their proxy voting agent. Pursuant to an agreement with DoubleLine Group, Glass Lewis obtains proxy ballots with respect to securities held by a Fund, evaluates the individual facts and circumstances relating to any proposal, and generally votes on any such proposal in accordance with the guidelines set forth in Appendix B attached hereto (the "**Guidelines**"). In the event that a proposal is not adequately addressed by the Guidelines, Glass Lewis will make a recommendation to the Adviser as to how to vote on such proposal, which the Adviser may accept or reject in accordance with the Proxy Policy. The Adviser's personnel are responsible for managing the relationship with Glass Lewis and/or any other third-party proxy voting service provider and for overseeing its compliance with the Proxy Policy. The Adviser, in its discretion, may retain another third-party proxy voting service provider in addition to or in lieu of Glass Lewis.

In connection with exercising a voting or consent right on behalf of a Fund, the Adviser will monitor for material conflicts of interest arising between the Adviser and the Fund in accordance with the Proxy Policy. If no conflict exists, the Adviser will vote the proxy on a case-by-case basis in the best interest of each client under the circumstances in accordance with the Proxy Policy, as discussed above.

If a material conflict does exist, the Adviser will seek to resolve any such conflict in accordance with the Proxy Policy, which seeks to resolve such conflict in the Fund's best interest by pursuing any one of the following courses of action: (i) voting (or not voting) in accordance with the guidelines included in the Proxy Policy; (ii) convening a Proxy Voting Committee meeting to assess available measures to address the conflict and implementing those measures; (iii) voting in accordance with the recommendation of an independent third-party service provider chosen by the Proxy Voting Committee; (iv) voting (or not voting) in accordance with the instructions of the Fund's Board of Trustees, or any committee thereof; or (v) not voting with respect to the proposal if consistent with DoubleLine's fiduciary obligations. In voting proxies, including those in which a material conflict may be determined to exist, the Adviser may also consider the factors and guidelines included in its Proxy Policy.

In certain limited circumstances, particularly in the area of structured finance, the Adviser may enter into voting agreements or other contractual obligations that govern the voting of shares and, in such cases, will vote any proxy in accordance with such agreement or obligation.

In addition, where the Adviser determines that there are unusual costs and/or difficulties associated with voting a proxy, which more typically might be the case with respect to proposals relating to non-U.S. issuers, the Adviser reserves the right to not vote on such a proposal unless it determines that the potential benefits of voting on such proposal exceed the expected cost to the relevant Fund.

The Adviser supervises and periodically reviews its proxy voting activities and implementation of the Proxy Policy.

Information about how a Fund voted proxies relating to portfolio securities held during the most recent twelve month period will be available no later than the following August 31st without charge, upon request, by calling (855) 937-0772 and on the SEC's website at <http://www.sec.gov>.

The written Proxy Policy is attached hereto as Appendix B. Copies of the written Proxy Policy are also available by calling (855) 937-0772.

CONTROL PERSONS AND PRINCIPAL HOLDERS OF SECURITIES

As of December 31, 2023, the Trustees and officers as a group owned less than 1% of the outstanding equity securities of the Trust.

Except as noted in the table below, to the Trust’s knowledge, as of January 5, 2024, no persons own of record 5% or more of any class of shares of a Fund, and no person is reflected on the books and records of the Trust as owning beneficially 5% or more of the outstanding shares of any class of any Fund of the Trust. A shareholder who beneficially owns 25% or more of a Fund is presumed to control that Fund and such shareholders will be able to affect the outcome of matters presented for a vote of that Fund’s shareholders. Persons controlling a Fund may be able to determine the outcome of any proposal submitted to the shareholders for approval, including changes to the Fund’s fundamental policies or the terms of the Advisory Agreement with the Adviser. The Adviser or its related parties or other investment companies sponsored or managed by the Adviser may invest in certain of the Funds, and may at certain times own all, substantially all or a substantial portion of such Funds’ shares during the Funds’ start-up period, in which case such investors may be deemed to control the Funds. For a summary of the principal risks associated with other funds investing in the Funds or the principal risks of other potentially large investor positions, see “Risk Considerations — Exchange-Traded Funds and other Investment Companies” and “Risk Considerations — Large Shareholder Risk.”

Distribution of Shares

In connection with each Fund's launch, each Fund was seeded through the sale of one or more Creation Units by each Fund to one or more initial investors. Initial investors participating in the seeding may be Authorized Participants, a lead market maker or other third party investor or an affiliate of each Fund or each Fund's adviser. Each such initial investor may sell some or all of the shares underlying the Creation Unit(s) held by them pursuant to the registration statement for each Fund (each, a "Selling Shareholder"), which shares have been registered to permit the resale from time to time after purchase. Each Fund will not receive any of the proceeds from the resale by the Selling Shareholders of these shares.

Selling Shareholders may sell shares owned by them directly or through broker-dealers, in accordance with applicable law, on any national securities exchange on which the shares may be listed or quoted at the time of sale, through trading systems, in the OTC market or in transactions other than on these exchanges or systems at fixed prices, at prevailing market prices at the time of the sale, at varying prices determined at the time of sale, or at negotiated prices. These sales may be effected through brokerage transactions, privately negotiated trades, block sales, entry into options or other derivatives transactions or through any other means authorized by applicable law. Selling Shareholders may redeem the shares held in Creation Unit size by them through an Authorized Participant.

Any Selling Shareholder and any broker-dealer or agents participating in the distribution of shares may be deemed to be "underwriters" within the meaning of Section 2(a)(11) of the Securities Act, in connection with such sales.

Any Selling Shareholder and any other person participating in such distribution will be subject to applicable provisions of the Exchange Act and the rules and regulations thereunder.

PORTFOLIO MANAGEMENT

Portfolio Manager Compensation

The overall objective of the compensation program for portfolio managers is for the Adviser to attract competent and expert investment professionals and to retain them over the long-term. Compensation is comprised of several components which, in the aggregate, are designed to achieve these objectives and to reward the portfolio managers for their contributions to the success of their clients and the Adviser. Portfolio managers are generally compensated through a combination of base salary, discretionary bonus and equity participation in the Adviser. Bonuses and equity generally represent most of the portfolio managers' compensation. However, in some cases, portfolio managers may have a profit sharing interest in the net income related to the business unit for which such portfolio managers are responsible. Such profit sharing arrangements can comprise a significant portion of a portfolio manager's overall compensation.

Salary. Salary is agreed to with managers at time of employment and is reviewed from time to time. It does not change significantly and often does not constitute a significant part of a portfolio manager's compensation.

Discretionary Bonus/Guaranteed Minimums. Portfolio managers receive discretionary bonuses. However, in some cases, pursuant to contractual arrangements, some portfolio managers may be entitled to a mandatory minimum bonus if the sum of their salary and profit sharing does not reach certain levels.

Equity Incentives. Portfolio managers participate in equity incentives based on overall firm performance of the Adviser, through direct ownership interests in the Adviser or participation in stock option or stock appreciation plans of the Adviser. These ownership interests or participation interests provide eligible portfolio managers the opportunity to participate in the financial performance of the Adviser as a whole. Participation is generally determined in the discretion of the Adviser, taking into account factors relevant to the portfolio manager's contribution to the success of that Adviser.

Other Plans and Compensation Vehicles. Portfolio managers may elect to participate in the Adviser's 401(k) plan, to which they may contribute a portion of their pre- and post-tax compensation to the plan for investment on a tax-deferred basis. The Adviser may also choose from time to time to offer certain other compensation plans and vehicles, such as a deferred compensation plan, to portfolio managers.

Summary. As described above, an investment professional's total compensation is determined through a subjective process that evaluates numerous quantitative and qualitative factors, including the contribution made to the overall investment process. Not all factors apply to each investment professional and there is no particular weighting or formula for considering certain factors. Among the factors considered are: relative investment performance of portfolios (although there are no specific benchmarks or periods of time used in measuring performance); complexity of investment strategies; participation in the investment team's dialogue; contribution to business results and overall business strategy; success of marketing/business development efforts and client servicing; seniority/length of service with the firm; management and supervisory responsibilities; and fulfillment of the Adviser's leadership criteria.

Ownership of Securities and Other Managed Accounts

The following table sets forth certain information, as of September 30, 2023, regarding all of the accounts managed by the Funds' portfolio managers. Total assets in the tables are in millions. Certain portfolio managers may invest in their investment strategies through investment vehicles other than the Funds, including through other Funds in the Trust as indicated below.

| | Registered Investment Companies | | Other Pooled Investment Vehicles | | Other Accounts | |
|---------------------|---------------------------------|--------------------------|----------------------------------|--------------------------|--------------------|--------------------------|
| Portfolio Manager | Number of Accounts | Total Assets (\$Million) | Number of Accounts | Total Assets (\$Million) | Number of Accounts | Total Assets (\$Million) |
| Jeffrey E. Gundlach | 35 | \$68,869,313,628 | 19 | \$6,703,361,113 | 73 | \$15,414,987,293 |
| | 0 | \$0 | 2 | \$1,075,025,743 | 3 | \$ 1,229,982,052 |
| Morris Chen | 4 | \$729,709,680 | 2 | \$ 308,402,488 | 2 | \$184,386,971 |
| | 0 | \$0 | 2 | \$ 308,402,488 | 0 | \$0 |
| Mark Cho | 1 | \$51,469,852 | 0 | \$0 | 0 | \$0 |
| Vitaliy Liberman | 2 | \$148,656,334 | 3 | \$1,258,168,314 | 24 | \$ 4,714,248,166 |
| | 0 | \$0 | 0 | \$0 | 2 | \$ 616,868,210 |
| Jeffrey J. Sherman | 27 | \$33,659,203,839 | 12 | \$2,889,861,692 | 20 | \$ 4,119,498,353 |
| Ken Shinoda | 5 | \$35,869,346,066 | 1 | \$ 250,867,587 | 20 | \$ 4,486,080,533 |
| | 0 | \$0 | 1 | \$ 250,867,587 | 0 | \$0 |
| Robert Stanbrook | 1 | \$51,469,852 | 0 | \$0 | 0 | \$0 |

* These accounts, which are a subset of the accounts in the preceding row, are subject to a performance-based advisory fee.

The following table sets forth the dollar range of securities of the Funds owned by each portfolio manager as of September 30, 2023.

| Fund Name/Portfolio Manager | Dollar Range of Securities Beneficially Owned |
|--|--|
| Opportunistic Bond ETF Jeffrey E. Gundlach Jeffrey J. Sherman | None \$100,001- \$500,000 |
| Commercial Real Estate ETF Morris Chen Mark Cho Robert Stanbrook | \$100,001 - \$500,000 \$50,001 - \$100,000 \$100,001 - \$500,000 |
| Mortgage ETF Jeffrey E. Gundlach Vitaliy Liberman Ken Shinoda | None None \$50,001 - \$100,000 |
| Equities ETF Jeffrey E. Gundlach Jeffrey J. Sherman | None \$100,001 - \$500,000 |

Conflicts

From time to time, potential and actual conflicts of interest may arise between a portfolio manager's management of the investments of a Fund, on the one hand, and the management of other accounts (including other registered investment companies and discretionary managed accounts), on the other. Potential and actual conflicts of interest also may result because of the Adviser's other business activities. Other accounts managed by a portfolio manager might have similar names and/or investment objectives or strategies as the Funds, be managed (benchmarked) against the same index that a portfolio investment of a Fund tracks, or otherwise hold, purchase, or sell securities that are eligible to be held, purchased or sold by the Funds. The other accounts might also have different investment objectives or strategies than the Funds.

Knowledge and Timing of Fund Trades. A potential conflict of interest may arise as a result of the portfolio manager's management of a Fund. Because of their positions with the Funds, the portfolio managers know the size, timing and possible market impact of a Fund's trades. It is theoretically possible that a portfolio manager could use this information to the advantage of other accounts under management, and also theoretically possible that actions could be taken (or not taken) to the detriment of a Fund.

Investment Opportunities. A potential conflict of interest may arise as a result of the portfolio manager's management of a number of accounts with varying investment guidelines. Often, an investment opportunity may be suitable for both a Fund and other accounts managed by the portfolio manager, but securities may not be available in sufficient quantities for both the Fund and the other accounts to participate fully. Similarly, there may be limited opportunity to sell an investment held by a Fund and another account. The Adviser has adopted policies and procedures reasonably designed to allocate investment opportunities on a fair and equitable basis over time.

Under the Adviser's allocation procedures, investment opportunities are allocated among various investment strategies based on individual account investment guidelines, the Adviser's investment outlook, cash availability and a series of other factors. The Adviser has also adopted additional internal practices to complement the general trade allocation policy that are designed to address potential conflicts of interest due to the side-by-side management of the Funds and certain pooled investment vehicles, including investment opportunity allocation issues.

Conflicts potentially limiting a Fund's investment opportunities may also arise when the Fund and other clients of the Adviser invest in, or even conduct research relating to, different parts of an issuer's capital structure, such as when the Fund owns senior debt obligations of an issuer and other clients own junior tranches of the same issuer. In such circumstances, decisions over whether to trigger an event of default, over the terms of any workout, or how to exit an investment may result in conflicts of interest. In order to minimize such conflicts, a portfolio manager may avoid certain investment opportunities that would potentially give rise to conflicts with other clients of the Adviser or result in the Adviser receiving material, non-public information, or the Adviser may enact internal procedures designed to minimize such conflicts, which could have the effect of limiting a Fund's investment opportunities. Additionally, if the Adviser acquires material non-public confidential information in connection with its business activities for other clients, a portfolio manager or other investment personnel may be restricted from purchasing securities or selling certain securities for a Fund or other clients. When making investment decisions where a conflict of interest may arise, the Adviser will endeavor to act in a fair and equitable manner between a Fund and other clients; however, in certain instances the resolution of the conflict may result in the Adviser acting on behalf of another client in a manner that may not be in the best interest, or may be opposed to the best interest, of a Fund.

Investors in a Fund may also be advisory clients of the Adviser or certain of its affiliates or related parties or a Fund may invest in a product managed or sponsored or otherwise affiliated with the Adviser. Accordingly, the Adviser may in the course of its business provide advice to advisory clients whose interests may conflict with those of the Fund, may render advice to a Fund that provides a direct or indirect benefit to the Adviser or a related party of the Adviser or may manage or advise a product in which the Fund is invested in such a way that would not be beneficial to the Fund. For example, the Adviser may advise a client who has invested in the Fund to redeem its investment in the Fund, which may cause the Fund to incur transaction costs and/or have to sell assets at a time when it would not otherwise do so. The Adviser could also, for example, make decisions with respect to a structured product managed or sponsored by the Adviser in a manner that could have adverse effects on investors in the product, including, potentially, a Fund. The Adviser currently provides asset allocation investment advice, including recommending the purchase and/or sale of shares of certain of the Funds, to another investment advisor which itself makes that advice available to a number of unaffiliated registered representatives, who then may provide identical or similar recommendations to their clients.

Related parties and advisory clients of the Adviser may provide initial funding to or otherwise invest in a Fund. The Adviser would face a conflict if an account it advises is invested in a Fund and that account's interests diverge from those of the Fund. When a related party and advisory client provides "seed capital" or other capital for a Fund, it may do so with the intention of redeeming all or part of its interest in the Fund at a future point in time or when it deems that sufficient additional capital has been invested in that Fund. The timing of a redemption by a related party could benefit the related party. For example, the related party may choose to redeem its shares at a time when the Fund's portfolio is more liquid than at times when other investors may wish to redeem all or part of their interests. In addition, a consequence of any redemption of a significant amount, including by a related party, is that investors remaining in the Fund will bear a proportionately higher share of Fund expenses following the redemption.

Broad and Wide-Ranging Activities. The portfolio managers, the Adviser and its related parties engage in a broad spectrum of activities. In the ordinary course of their business activities, the portfolio managers, the Adviser and its related parties may engage in activities where the interests of certain divisions of the Adviser and its related parties or the interests of their clients may conflict with the interests of the shareholders of a Fund.

Potential conflicts may be inherent in the Adviser's use of multiple strategies. For example, conflicts will arise in cases where different clients (for purposes of this discussion, references to a "client" should be read to include potentially one or more Funds potentially as well as potentially other client accounts, including those in which the Adviser or its related persons and employees may have interests), invest in different parts of an issuer's capital structure, including circumstances in which one or more clients may own securities or obligations of an issuer and other clients of the Adviser, may own or seek to acquire different securities of the same issuer. For example, a Fund may acquire a loan, loan participation or a loan assignment of a particular borrower in which one or more other clients of the Adviser have an equity investment, or may invest in senior debt obligations of an issuer for one client and junior debt obligations or equity of the same issuer for another client.

The Adviser may also, for example, direct a client to invest in a tranche of a structured finance vehicle, such as an MBS, CLO or CDO, where the Adviser is also, at the same or different time, directing another client to make investments in a different tranche of the same vehicle, which tranche's interests may be adverse to other tranches. The Adviser may also cause a client to purchase from, or sell assets to, an entity, such as a structured finance vehicle, in which other clients may have an interest, potentially in a manner that will have an adverse effect on the other clients. There may also be conflicts where, for example, a client holds certain debt or equity securities of an issuer, and that same issuer has issued other debt, equity or other instruments that are owned by other clients or by an entity, such as a structured finance vehicle, in which other clients have an interest.

In each of the situations described above, the Adviser may take actions with respect to the assets held by one client that are adverse to the interests of other clients, for example, by foreclosing on loans, by putting an issuer into default, or by exercising rights to purchase or sell to an issuer, causing an issuer to take actions adverse to certain classes of securities, or otherwise. In negotiating the terms and conditions of any such investments, or any subsequent amendments or waivers or taking any other actions, the Adviser may find that the interests of a client and the interests of one or more other clients could conflict. In these situations, decisions over items such as whether to make the investment or take an action, proxy voting, reorganizations, how to exit an investment, or bankruptcy or similar matters (including, for example, whether to trigger an event of default or change the terms of any workout) may result in conflicts of interest.

Similarly, if an issuer in which a client and one or more other clients directly or indirectly hold different classes of securities (or other assets, instruments or obligations issued by such issuer or underlying investments of such issuer) encounters financial problems, decisions over the terms of any workout will raise conflicts of interests (including, for example, conflicts over proposed waivers and amendments to debt covenants). For example, a debt holder may be better served by a liquidation of the issuer in which it may be paid in full, whereas an equity or junior bond holder might prefer a reorganization that holds the potential to create value for the equity holders. The Adviser may cause a client to purchase an issuer's debt security and cause another client to purchase a

different debt security of the same issuer, such as a different bond of the issuer or different tranche of a mortgage-backed security that is subordinated to the investment held by other clients. In some cases the Adviser may refrain from taking certain actions or making certain investments on behalf of clients in order to avoid or mitigate certain conflicts of interest or to prevent adverse regulatory or other effects on the Adviser, or may sell investments for certain clients (in each case potentially disadvantaging the clients on whose behalf the actions are not taken, investments not made, or investments sold). Foregone investment opportunities or actions may adversely affect the performance of a client's account if similarly attractive opportunities are not available or cannot be identified. In other cases, the Adviser may not refrain from taking actions or making investments on behalf of certain clients that have the potential to disadvantage other Clients. In addition, the Adviser may take actions or refrain from taking actions in order to mitigate legal risks to the Adviser or its affiliates or its clients even if disadvantageous to a client. Moreover, a client may invest in a transaction in which one or more other clients are expected to participate, or already have made or will seek to make, an investment.

The Adviser and its related parties may also advise or sponsor other investment vehicles (including other registered investment companies, such as ETFs, and collective investment trusts) that have names and follow investment programs similar to that of a Fund but differ in certain ways (e.g., greater tax efficiency, different liquidity characteristics, lower costs, different investor eligibility requirements). Investors may seek to redeem their shares in a Fund in order to invest in these other investment vehicles, which would cause a Fund to incur transaction costs and/or realize capital gains that must be distributed to all shareholders, including those who do not redeem their shares in the Fund, as taxable income. Such redemptions may adversely impact a Fund's performance, increase costs borne by Fund investors, and affect the after-tax return of investors.

Possible Future Activities. The Adviser and its related parties may expand the range of services that it provides over time. Except as provided herein, the Adviser and its related parties will not be restricted in the scope of its business or in the performance of any such services (whether now offered or undertaken in the future) even if such activities could give rise to conflicts of interest, and whether or not such conflicts are described herein. The Adviser and its related parties have, and will continue to develop, relationships with a significant number of companies, financial sponsors and their senior managers, including relationships with clients who may hold or may have held investments similar to those intended to be made by a Fund. These clients may themselves represent appropriate investment opportunities for a Fund or may compete with a Fund for investment opportunities.

Performance Fees and Personal Investments. A portfolio manager may advise certain accounts with respect to which the advisory fee is based entirely or partially on performance or in respect of which the portfolio manager may have made a significant personal investment. Such circumstances may create a conflict of interest for the portfolio manager in that the portfolio manager may have an incentive to allocate the investment opportunities that he or she believes might be the most profitable to such other accounts instead of allocating them to a Fund. The Adviser has adopted policies and procedures reasonably designed to allocate investment opportunities between the Funds and performance fee based accounts on a fair and equitable basis over time.

Joint Insurance Policies. The Funds have entered into (and paid a portion of the premiums of) a joint errors and omissions/trustees and officers insurance policy with the Adviser and certain private funds advised by the Adviser. Participation in the joint policy could potentially limit the recovery of a Fund as a result of, among other reasons, claims by other insureds (such as the Adviser or a private fund) exhausting the available coverage. Such arrangements are reviewed annually by the Board. The Adviser may engage an independent third party to assess the allocation of the portions of the premiums paid by the Funds and the Adviser. Any such expenses borne by the Funds are indirectly borne by the Fund's shareholders.

Marketability of the Funds. Certain investments a Fund may make, such as those tied or related to well-known indices or indices sponsored by financial institutions involved in the distribution of mutual funds generally, may enhance the marketability and distribution of a Fund's shares or encourage certain financial institutions to market or promote the Fund's shares, potentially benefiting the Adviser because its advisory fee is based on assets under

management. The Adviser has a duty to disregard its own interest in selecting investments on behalf of a Fund and does not consider fund marketing or distribution considerations in its investment selection process.

DISTRIBUTION OF TRUST SHARES

Foreside Fund Services, LLC (“**Distributor**”) serves as the nonexclusive distributor of each class of the Funds’ shares pursuant to a Distribution Agreement (“**Distribution Agreement**”) with the Trust which is subject to approval by the Board. The Distributor has agreed to sell shares of the Funds on a best efforts basis as agent for each Fund upon the terms and at the current offering price (plus sales charge, if any) described in the Funds’ Prospectus. The Trust’s Distribution Agreement is terminable without penalty, on not less than 60 days’ notice, by the Trust’s Board of Trustees, by vote of holders of a majority of the Trust’s shares, or by the Distributor. The Distributor receives no compensation from the Trust except payments pursuant to the Trust’s amended and restated distribution plan adopted pursuant to Rule 12b-1 under the 1940 Act (“**Distribution Plan**”), if applicable.

PAYMENTS BY THE ADVISER

The Adviser may make payments, at its own expense and out of its own revenues, in connection with making the Funds available for sale on various platforms or models, the sale and distribution of the shares of the Funds it advises, or for services to the Funds and their respective shareholders. The Adviser has also agreed to compensate certain intermediaries a fixed amount per year as part of the Adviser’s participation in the intermediaries’ select program, which offers, among other things, access to investor forums, consultation services, new distribution platforms, intermediary client events and other promotional opportunities. The Adviser has entered into arrangements with one or more intermediaries in exchange for certain administrative or diligence related services, which fees may be paid, for example, per CUSIP at initial onboarding and with ongoing annual payments made thereafter, or as a flat annual fee (such fee arrangements, an “Administrative Fee”), and has also entered into arrangements with one or more intermediaries who distribute shares of the Funds to procure data that the Adviser believes will be helpful in furthering its marketing and distribution efforts in respect of the Funds and other products it may manage, including data regarding those at a firm who have clients invested in the Funds or other products the Adviser may manage. Such payments are in addition to any service payments or Distribution Plan amounts paid to FINRA member firms or to other intermediaries.

The intermediaries listed below have entered into contractual marketing and distribution support arrangements with the Adviser. The list does not include those intermediaries who charge an Administrative Fee or other similar fees and with whom the Funds do not otherwise have an agreement to make the Funds available for sale on the intermediaries’ distribution platforms.

Charles Schwab & Co., Inc.

Foundations Investment Advisors, LLC

LPL Financial

National Financial Services, LLC

Raymond James & Associates, Inc.

In addition to member firms of FINRA, payments may also be made to their selling and shareholder servicing agents that sell shares of or provide services to the Funds and their shareholders, such as banks, insurance companies and plan administrators.

ADMINISTRATION AGREEMENT

J.P. Morgan Chase Bank, N.A. serves as the administrator of the Trust pursuant to an Administration Agreement with the Trust (the “**Administration Agreement**”). The Administrator provides certain accounting and administrative services to the Trust, including, among other things, fund accounting; calculation of the daily NAV of each Fund; monitoring the Trust’s expense accruals; calculating monthly total return and yield figures; prospectus and statement of additional information compliance monitoring; and preparing certain financial statements of the Trust.

The following table sets forth the administration fees of the Funds paid by the Adviser to the Administrator for administration services for the fiscal year ended September 30, 2023:

| Fund | Administration Fees Paid During Fiscal Period Ended September 30, 2023 |
|-----------------------------|---|
| Opportunistic Bond ETF | \$59,006 |
| Commercial Real Estate ETF* | \$30,824 |
| Mortgage ETF* | \$32,599 |
| Equities ETF | \$67,744 |

* The Funds commenced operations on March 31, 2023.

DISTRIBUTIONS AND TAXES

The following discussion of U.S. federal income tax consequences is based on the Code, existing U.S. Treasury regulations, and other applicable authority, as of the date of this SAI. These authorities are subject to change by legislative or administrative action, possibly with retroactive effect. The following discussion is only a summary of some of the important U.S. federal tax considerations generally applicable to investments in the Funds. It does not address special tax rules applicable to certain classes of investors, such as investors holding Fund shares through tax-advantaged accounts (such as 401(k) plan accounts or individual retirement accounts), tax-exempt entities, foreign investors, insurance companies, financial institutions and investors making in-kind contributions to the Fund. You should consult your tax adviser for more information about your own tax situation, including possible other U.S. federal, state, local, and, where applicable, foreign tax consequences of investing in a Fund.

Taxation of the Funds.

Each Fund intends to elect and to qualify each year to be treated as a RIC under Subchapter M of the Code. In order to qualify for the special tax treatment accorded RICs and their shareholders, a Fund must, among other things: (a) derive at least 90% of its gross income for each taxable year from (i) dividends, interest, payments with respect to certain securities loans, and gains from the sale or other disposition of stock, securities or foreign currencies, or other income (including but not limited to gains from options, futures, or forward contracts) derived with respect to its business of investing in such stock, securities, or currencies, and (ii) net income derived from interests in “qualified publicly traded partnerships” (as defined below); (b) diversify its holdings so that, at the close of each quarter of a Fund’s taxable year, (i) at least 50% of the market value of a Fund’s total assets consists of cash, cash items, U.S. government securities, securities of other RICs and other securities limited in respect of any one issuer to a value not greater than 5% of the value of a Fund’s total assets and not more than 10% of the outstanding voting securities of such issuer, and (ii) not more than 25% of the value of a Fund’s total assets is invested, including through corporations in which a Fund owns a 20% or more voting stock interest (x) in the securities (other than those of the U.S. government or other RICs) of any one issuer or of two or more issuers that a Fund controls and that are engaged in the same, similar or related trades or businesses, or (y) in the securities of one or more qualified publicly traded partnerships (as defined below); and (c) distribute

with respect to each taxable year at least 90% of the sum of its investment company taxable income (as that term is defined in the Code without regard to the deduction for dividends paid – generally, taxable ordinary income and the excess, if any, of net short-term capital gains over net long-term capital losses) and net tax-exempt interest income, if any, for such year.

In general, for purposes of the 90% gross income requirement described in (a) above, income derived from a partnership will be treated as qualifying income only to the extent such income is attributable to items of income of the partnership that would be qualifying income if realized directly by the RIC. However, 100% of the net income derived from an interest in a “qualified publicly traded partnership” (a partnership (x) the interests in which are traded on an established securities market or are readily tradable on a secondary market or the substantial equivalent thereof, and (y) that derives less than 90% of its income from the qualifying income described in (a)(i) above) will be treated as qualifying income. In general, such entities will be treated as partnerships for federal income tax purposes because they meet the passive income requirement under Code Section 7704(c)(2). In addition, although in general the passive loss rules of the Code do not apply to RICs, such rules do apply to a RIC with respect to items attributable to an interest in a qualified publicly traded partnership. MLPs, if any, in which a Fund invests generally will qualify as qualified publicly traded partnerships.

Gains from foreign currencies (including foreign currency futures and foreign currency forward contracts) currently constitute “qualifying income” for purposes of the 90% test described in (a) above. However, the U.S. Treasury has the authority to issue regulations (possibly with retroactive effect) excluding from the definition of qualifying income a Fund’s foreign currency gains to the extent that such income is not directly related to a Fund’s principal business of investing in stock or securities. This could adversely affect the qualification of a Fund as a RIC.

For purposes of the diversification test in (b) above, the term “outstanding voting securities of such issuer” will include the equity securities of a qualified publicly traded partnership. Also, for purposes of the diversification test in (b) above, the identification of the issuer (or, in some cases, issuers) of a particular Fund investment can depend on the terms and conditions of that investment. In some cases, identification of the issuer (or issuers) is uncertain under current law, and an adverse determination or future guidance by the IRS with respect to issuer identification for a particular type of investment may adversely affect a Fund’s ability to meet the diversification test in (b) above.

If a Fund qualifies as a RIC that is accorded special tax treatment, the Fund will not be subject to U.S. federal income tax on income or gains distributed in a timely manner to its shareholders in the form of dividends (including Capital Gain Dividends, as defined below).

If a Fund were to fail to meet the income, diversification or distribution tests described above, the Fund could in some cases cure such failure, including by paying a Fund-level tax, paying interest, making additional distributions, or disposing of certain assets. If a Fund were ineligible to or otherwise did not cure such failure for any year, or if a Fund were otherwise to fail to qualify as a RIC accorded special tax treatment for such year, the Fund would be subject to tax on its taxable income at the corporate rates, and all distributions from earnings and profits, including any distributions of net long-term capital gains would be taxable to shareholders as ordinary income. Some portions of such distributions may be eligible for the dividends received deduction in the case of corporate shareholders and may be eligible to be treated as qualified dividend income in the case of shareholders taxed as individuals, provided, in both cases, the shareholder meets certain holding period and other requirements in respect of a Fund’s shares (as described below). In addition, a Fund could be required to recognize unrealized gains, pay substantial taxes and interest, and make substantial distributions before re-qualifying as a RIC that is accorded special tax treatment.

Each Fund intends to distribute at least annually to its shareholders all or substantially all of its investment company taxable income (computed without regard to the dividends paid deduction), its net tax-exempt income (if any) and its net capital gain (that is, the excess of net long-term capital gain over net short-term capital loss, in

each case determined with reference to any loss carryforwards). Any taxable income including any net capital gain retained by a Fund will be subject to tax at the Fund level at regular corporate rates. In the case of net capital gain, a Fund is permitted to designate the retained amount as undistributed capital gain in a timely notice to its shareholders who would then, in turn, be (i) required to include in income for U.S. federal income tax purposes, as long-term capital gain, their shares of such undistributed amount, and (ii) entitled to credit their proportionate shares of the tax paid by the Fund on such undistributed amount against their U.S. federal income tax liabilities, if any, and to claim refunds on a properly-filed U.S. tax return to the extent the credit exceeds such liabilities. If a Fund makes this designation, for U.S. federal income tax purposes, the tax basis of shares owned by a shareholder of the Fund would be increased by an amount equal to the difference between the amount of undistributed capital gains included in the shareholder's gross income under clause (i) of the preceding sentence and the tax deemed paid by the shareholder under clause (ii) of the preceding sentence. Each Fund is not required to, and there can be no assurance a Fund will, make this designation if it retains all or a portion of its net capital gain in a taxable year.

In determining its net capital gain, including in connection with determining the amount available to support a Capital Gain Dividend (as defined below), its taxable income, and its earnings and profits, a RIC generally may elect to treat part or all of any post-October capital loss (defined as any net capital loss attributable to the portion, if any, of the taxable year after October 31 or, if there is no such loss, the net long-term capital loss or net short-term capital loss attributable to such portion of the taxable year) or late-year ordinary loss (generally, the sum of its (i) net ordinary loss from the sale, exchange or other taxable disposition of property, attributable to the portion, if any, of the taxable year after October 31, and its (ii) other net ordinary loss, if any, attributable to the portion, if any, of the taxable year after December 31) as if incurred in the succeeding taxable year.

If a Fund were to fail to distribute in a calendar year at least an amount equal to the sum of 98% of its ordinary income for such year and 98.2% of its capital gain net income for the one-year period ending October 31 of such year, plus any such amounts retained from the prior year, a Fund would be subject to a nondeductible 4% excise tax on the undistributed amounts. For purposes of the required excise tax distribution, a RIC's ordinary gains and losses from the sale, exchange or other taxable disposition of property that would otherwise be taken into account after October 31 of a calendar year generally are treated as arising on January 1 of the following calendar year. Also, for these purposes, a Fund will be treated as having distributed any amount on which it has been subject to corporate income tax for the taxable year ending within the calendar year. Each Fund intends generally to make distributions sufficient to avoid imposition of the 4% excise tax, although there can be no assurance that it will be able to do so.

Under current law, a RIC generally is permitted on its tax return to treat as a dividend the portion of redemption proceeds paid to redeeming shareholders that represents the redeeming shareholders' pro rata share of the RIC's accumulated earnings and profits. This practice, which involves the use of tax equalization, will reduce the amount of income and gains that a Fund is required to distribute as dividends to non-redeeming shareholders in order for the Fund to avoid U.S. federal income tax and excise tax, and the amount of any undistributed income will be reflected in the value of the Fund's shares. The total return on a shareholder's investment will not be reduced as a result of using tax equalization. Tax equalization is not available to a RIC that is a personal holding company for federal income tax purposes.

Capital losses in excess of capital gains ("**net capital losses**") are not permitted to be deducted against a Fund's net investment income. Instead, potentially subject to certain limitations, a Fund may carry net capital losses from any taxable year forward to subsequent taxable years to offset capital gains, if any, realized during such subsequent taxable year. If a Fund incurs or has incurred net capital losses, those losses will be carried forward to one or more subsequent taxable years without expiration; any such carryforward losses will retain their character as short-term or long-term. The Fund must apply such carryforwards first against gains of the same character. A Fund's available capital loss carryforwards, if any, will be set forth in its annual shareholder report for each fiscal year.

Fund Distributions.

For U.S. federal income tax purposes, distributions of investment income are generally taxable to shareholders as ordinary income. Taxes on distributions of capital gains are determined by how long a Fund owned (or is deemed to have owned) the investments that generated the gains, rather than by how long a shareholder has owned his or her shares. In general, a Fund will recognize long-term capital gain or loss on investments it has owned (or is deemed to have owned) for more than one year, and short-term capital gain or loss on investments it has owned (or is deemed to have owned) for one year or less. Distributions of net capital gain that are properly reported by a Fund to its shareholders as capital gain dividends (“**Capital Gain Dividends**”) will be taxable to shareholders as long-term capital gains includible in net capital gain and taxed to individuals at reduced rates relative to ordinary income. Distributions from capital gains are generally made after applying any available capital loss carryforwards. Distributions of net short-term capital gain (as reduced by any net long-term capital loss for the taxable year) will be taxable to shareholders as ordinary income. The IRS and U.S. Treasury have issued regulations that impose special rules in respect of Capital Gain Dividends received through partnership interests constituting “applicable partnership interests” under Section 1061 of the Code.

In general, distributions of investment income reported by a Fund to its shareholders as derived from qualified dividend income are taxed in the hands of individuals at the rates applicable to net capital gain, provided holding period and other requirements are met at both the shareholder and Fund level. In order for some portion of the dividends received by a Fund shareholder to be “qualified dividend income” that is eligible for taxation at long-term capital gain rates, the Fund must meet holding period and other requirements with respect to some portion of the dividend-paying stocks in its portfolio and the shareholder must meet holding period and other requirements with respect to the Fund’s shares. In general, a dividend will not be treated as qualified dividend income (at either the Fund or shareholder level) (1) if the dividend is received with respect to any share of stock held for fewer than 61 days during the 121-day period beginning on the date which is 60 days before the date on which such share becomes ex-dividend with respect to such dividend (or, in the case of certain preferred stock, 91 days during the 181-day period beginning 90 days before such date), (2) to the extent that the recipient is under an obligation (whether pursuant to a short sale or otherwise) to make related payments with respect to positions in substantially similar or related property, (3) if the recipient elects to have the dividend income treated as investment income for purposes of the limitation on deductibility of investment interest, or (4) if the dividend is received from a foreign corporation that is (a) not eligible for the benefits of a comprehensive income tax treaty with the United States (with the exception of dividends paid on stock of such a foreign corporation readily tradable on an established securities market in the United States) or (b) treated as a passive foreign investment company. The Fixed Income Funds do not expect a significant portion of its distributions to be derived from qualified dividend income.

In general, dividends of net investment income received by corporate shareholders of a Fund will qualify for the dividends received deduction generally available to corporations only to the extent of the amount of eligible dividends received by the Fund from domestic corporations for the taxable year. A dividend received by a Fund will not be treated as a dividend eligible for the dividends received deduction (1) if it has been received with respect to any share of stock that the Fund has held for less than 46 days (91 days in the case of certain preferred stock) during the 91-day period beginning on the date which is 45 days before the date on which such share becomes ex-dividend with respect to such dividend (during the 181-day period beginning 90 days before such date in the case of certain preferred stock) or (2) to the extent that the Fund is under an obligation (pursuant to a short sale or otherwise) to make related payments with respect to positions in substantially similar or related property. Moreover, the dividends received deduction may otherwise be disallowed or reduced (1) if the corporate shareholder fails to satisfy the foregoing requirements with respect to its shares of a Fund or (2) by application of various provisions of the Code (for instance, the dividends received deduction is reduced in the case of a dividend received on debt-financed portfolio stock (generally, stock acquired with borrowed funds)). The Fixed Income Funds do not expect that a significant portion of its distributions will be eligible for the corporate dividends received deduction.

Any distribution of income that is attributable to (i) income received by a Fund in lieu of dividends with respect to securities on loan pursuant to a securities lending transaction or (ii) dividend income received by a Fund on securities it temporarily purchased from a counterparty pursuant to a repurchase agreement that is treated for U.S. federal income tax purposes as a loan by a Fund, will not constitute qualified dividend income to individual shareholders and will not be eligible for the dividends received deduction for corporate shareholders.

A RIC that receives business interest income may pass through its net business interest income for purposes of the tax rules applicable to the interest expense limitations under Section 163(j) of the Code. A RIC's total "Section 163(j) Interest Dividend" for a tax year is limited to the excess of the RIC's business interest income over the sum of its business interest expense and its other deductions properly allocable to its business interest income. A RIC may, in its discretion, designate all or a portion of ordinary dividends as Section 163(j) Interest Dividends, which would allow the recipient shareholder to treat the designated portion of such dividends as interest income for purposes of determining such shareholder's interest expense deduction limitation under Code Section 163(j). This can potentially increase the amount of a shareholder's interest expense deductible under Code Section 163(j). In general, to be eligible to treat a Section 163(j) Interest Dividend as interest income, you must have held your shares in a Fund for more than 180 days during the 361-day period beginning on the date that is 180 days before the date on which the share becomes ex-dividend with respect to such dividend. Section 163(j) Interest Dividends, if so designated by a Fund, will be reported to your financial intermediary or otherwise in accordance with the requirements specified by the IRS.

Distributions by a Fund to its shareholders that each Fund properly reports as "section 199A dividends," as defined and subject to certain conditions described below, are treated as "qualified REIT dividends" in the hands of non-corporate shareholders. Non-corporate shareholders are permitted a U.S. federal income tax deduction equal to 20% of qualified REIT dividends received by them, subject to certain limitations. Very generally, a "section 199A dividend" is any dividend or portion thereof that is attributable to certain dividends received by a RIC from REITs, to the extent such dividends are properly reported as such by the RIC in a written notice to its shareholders. A section 199A dividend is treated as a qualified REIT dividend only if the shareholder receiving such dividend holds the dividend-paying RIC shares for at least 46 days of the 91-day period beginning 45 days before the shares become ex-dividend, and is not under an obligation to make related payments with respect to a position in substantially similar or related property. A Fund is permitted to report such part of its dividends as section 199A dividends as are eligible, but is not required to do so. Distributions of income or gain attributable to derivatives with respect to REIT securities, including swaps, will not constitute qualified REIT dividends.

Subject to any future regulatory guidance to the contrary, any distribution of income attributable to qualified publicly traded partnership income from a Fund's investment in an MLP will ostensibly not qualify for the deduction that would be available to a non-corporate shareholder were the shareholder to own such MLP directly. Furthermore, distributions of income or gain attributable to swaps on MLP securities will not constitute qualified publicly traded partnership income and will not be eligible for such deduction.

If, in and with respect to any taxable year, a Fund makes a distribution to a shareholder in excess of a Fund's current and accumulated earnings and profits, the excess distribution will be treated as a return of capital to the extent of such shareholder's tax basis in its shares, and thereafter as capital gain. A return of capital is not taxable, but it reduces a shareholder's tax basis in its shares, thus reducing any loss or increasing any gain on a subsequent taxable disposition by the shareholder of its shares.

As required by federal law, detailed federal tax information with respect to each calendar year will be furnished to shareholders early in the succeeding year.

Distributions are taxable as described herein whether shareholders receive them in cash or reinvest them in additional shares of a Fund.

A dividend paid to shareholders by a Fund in January generally is deemed to have been paid by the Fund on December 31 of the preceding year, if the dividend was declared and payable to shareholders of record on a date in October, November, or December of that preceding year.

Distributions on a Fund's shares are generally subject to U.S. federal income tax as described herein to the extent they do not exceed a Fund's realized income and gains, even though such distributions may economically represent a return of a particular shareholder's investment. Such distributions are likely to occur in respect of shares purchased at a time when a Fund's NAV reflects either unrealized gains, or realized but undistributed income or gains, that were therefore included in the price the shareholder paid. Such distributions may reduce the fair market value of a Fund's shares below the shareholder's cost basis in those shares. As described above, each Fund is required to distribute realized income and gains regardless of whether the Fund's NAV also reflects unrealized losses.

Tax Implications of Certain Fund Investments.

Special Rules for Debt Obligations. Some debt obligations with a fixed maturity date of more than one year from the date of issuance (and zero-coupon debt obligations with a fixed maturity date of more than one year from the date of issuance) will be treated as debt obligations that are issued originally at a discount. Generally, the original issue discount ("OID") is treated as interest income and is included in a Fund's income and required to be distributed by the Fund over the term of the debt security, even though payment of that amount is not received until a later time, upon partial or full repayment or disposition of the debt security. In addition, payment-in-kind securities will give rise to income which is required to be distributed and is taxable even though the Fund holding the security receives no interest payment in cash on the security during the year.

Some debt obligations with a fixed maturity date of more than one year from the date of issuance that are acquired by a Fund in the secondary market may be treated as having market discount. Very generally, market discount is the excess of the stated redemption price of a debt obligation (or in the case of an obligation issued with OID, its revised issue price) over the purchase price of such obligation. Generally, any gain recognized on the disposition of, and any partial payment of principal on, a debt security having market discount is treated as ordinary income to the extent the gain, or principal payment, does not exceed the accrued market discount on such debt security. Alternatively, a Fund may elect to accrue market discount currently, in which case the Fund will be required to include the accrued market discount in a Fund's income (as ordinary income) and thus distribute it over the term of the debt security, even though payment of that amount is not received until a later time, upon partial or full repayment or disposition of the debt security. The rate at which the market discount accrues, and thus is included in the Fund's income, will depend upon which of the permitted accrual methods the Fund elects.

Some debt obligations with a fixed maturity date of one year or less from the date of issuance may be treated as having OID or, in certain cases, acquisition discount (very generally, the excess of the stated redemption price over the purchase price). A Fund will be required to include the OID or acquisition discount in income (as ordinary income) and thus distribute it over the term of the debt security, even though payment of that amount is not received until a later time, upon partial or full repayment or disposition of the debt security. The rate at which OID or acquisition discount accrues, and thus is included in a Fund's income, will depend upon which of the permitted accrual methods the Fund elects.

If a Fund holds the foregoing kinds of obligations or other obligations subject to special rules under the Code, it may be required to pay out as an income distribution each year an amount which is greater than the total amount of cash interest a Fund actually received. Such distributions may be made from the cash assets of a Fund or, if necessary, by liquidation of portfolio securities including at a time when it may not be advantageous to do so. These dispositions may cause a Fund to realize higher amounts of short-term capital gains (generally taxed to shareholders at ordinary income tax rates) and, in the event the Fund realizes net capital gains from such transactions, its shareholders may receive a larger Capital Gain Dividend than if the Fund had not held such obligations.

A portion of the OID accrued on certain high yield discount obligations may not be deductible to the issuer and will instead be treated as a dividend paid by the issuer for purposes of the dividends received deduction. In such cases, if the issuer of the high yield discount obligations is a domestic corporation, dividend payments by a Fund may be eligible for the dividends received deduction to the extent attributable to the deemed dividend portion of such OID.

A Fund may invest in inflation-linked debt securities. Any increase in the principal amount of an inflation-linked debt security will be original interest discount, which is taxable as ordinary income and is required to be distributed, even though the Fund will not receive the principal, including any increase thereto, until maturity. As noted above, if a Fund invests in such securities it may be required to liquidate other investments, including at times when it is not advantageous to do so, in order to satisfy its distribution requirements and to eliminate any possible taxation at the Fund level.

Securities Purchased at a Premium. Very generally, where a Fund purchases a bond at a price that exceeds the redemption price at maturity (*i.e.*, a premium), the premium is amortizable over the remaining term of the bond. In the case of a taxable bond, if the Fund makes an election applicable to all such bonds it purchases, which election is irrevocable without consent of the IRS, the Fund reduces the current taxable income from the bond by the amortized premium and reduces its tax basis in the bond by the amount of such offset; upon the disposition or maturity of such bonds, the Fund is permitted to deduct any remaining premium allocable to a prior period. In the case of a tax-exempt bond, tax rules require the Fund to reduce its tax basis by the amount of amortized premium.

At-risk or Defaulted Debt Obligations. Investments in debt obligations that are at risk of or in default present special tax issues for a Fund. Tax rules are not entirely clear about issues such as whether or to what extent a Fund should recognize market discount on a debt obligation; when a Fund may cease to accrue interest, OID or market discount; when and to what extent a Fund may take deductions for bad debts or worthless securities and how a Fund should allocate payments received on obligations in default between principal and income. These and other related issues will be addressed by a Fund when, as and if it invests in such obligations, in order to seek to ensure that it distributes sufficient income to preserve its status as a RIC and does not become subject to U.S. federal income or excise tax.

Certain Investments in U.S. REITs. Any investment by a Fund in equity securities of U.S. REITs qualifying as such under Subchapter M of the Code may result in the Fund's receipt of cash in excess of the REIT's earnings; if the Fund distributes these amounts, these distributions could constitute a return of capital to Fund shareholders for U.S. federal income tax purposes. Dividends received by the Fund from a REIT will not qualify for the corporate dividends received deduction and generally will not constitute qualified dividend income. Certain distributions made by a Fund attributable to dividends received by the Fund from REITs may qualify as "qualified REIT dividends" in the hands of non-corporate shareholders, as discussed above.

REITs in which a Fund invests often do not provide complete and final tax information to the Fund until after the time that the Fund issues a tax reporting statement. As a result, a Fund may at times find it necessary to reclassify the amount and character of its distributions to you after it issues your tax reporting statement. When such reclassification is necessary, a Fund (or financial intermediaries, such as brokers, through which a shareholder holds Fund shares) will send you a corrected, final IRS Form 1099-DIV to reflect the reclassified information. If you receive a corrected IRS Form 1099-DIV, use the information on this corrected form, and not the information on the previously issued tax reporting statement, in completing your tax returns.

Mortgage-Related Securities. The Funds may invest, including through investments in REITs or other pass-through entities, in residual interests in REMICs (including by investing in residual interests in CMOs with respect to which an election to be treated as a REMIC is in effect) or equity interests in taxable mortgage pools ("TMPs"). Under a notice issued by the IRS in October 2006 and U.S. Treasury regulations that have yet to be issued but may apply retroactively, a portion of a Fund's income (including income allocated to the Fund from a

REIT or other pass-through entity) that is attributable to a residual interest in a REMIC or an equity interest in a TMP (referred to in the Code as an “**excess inclusion**”) will be subject to U.S. federal income tax in all events. This notice also provides, and the regulations are expected to provide, that excess inclusion income of a RIC will be allocated to shareholders of the RIC in proportion to the dividends received by such shareholders, with the same consequences as if the shareholders held the related interest directly. As a result, a Fund investing in such interests may not be a suitable investment for certain tax-exempt investors, as noted below.

In general, excess inclusion income allocated to shareholders (i) cannot be offset by net operating losses (subject to a limited exception for certain thrift institutions), (ii) will constitute unrelated business taxable income (“**UBTI**”) to entities (including a qualified pension plan, an individual retirement account, a 401(k) plan, a Keogh plan or other tax-exempt entity) subject to tax on UBTI, thereby potentially requiring such an entity that is allocated excess inclusion income, and otherwise might not be required to file a tax return, to file a tax return and pay tax on such income, and (iii) in the case of a non-U.S. shareholder, will not qualify for any reduction in U.S. federal withholding tax. A shareholder will be subject to U.S. federal income tax on such inclusions notwithstanding any exemption from such income tax otherwise available under the Code.

Foreign Currency Transactions. Any transaction by a Fund in foreign currencies, foreign currency-denominated debt obligations or certain foreign currency options, futures contracts or forward contracts (or similar instruments) may give rise to ordinary income or loss to the extent such income or loss results from fluctuations in the value of the foreign currency concerned. Any such net gains could require a larger dividend toward the end of the calendar year. Any such net losses will generally reduce and potentially require the recharacterization of prior ordinary income distributions. Such ordinary income treatment may accelerate Fund distributions to shareholders and increase the distributions taxed to shareholders as ordinary income. Any net ordinary losses so created cannot be carried forward by a Fund to offset income or gains earned in subsequent taxable years.

Passive Foreign Investment Companies. A Fund’s investments that are treated as equity investments for federal income tax purposes in certain “passive foreign investment companies” (“**PFICs**”) could potentially subject the Fund to a U.S. federal income tax (including interest charges) on distributions received from the company or on proceeds received from the disposition of shares in the company. This tax cannot be eliminated by making distributions to Fund shareholders. However, a Fund may elect to avoid the imposition of this tax. For example, a Fund may elect to treat a PFIC as a qualified electing fund (*i.e.*, make a “**QEF election**”), in which case the Fund will be required to include its share of the PFIC’s income and net capital gains annually, regardless of whether it receives any distribution from the PFIC. A Fund also may make an election to mark the gains (and to a limited extent losses) in such holdings to the market as though it had sold (and, solely for purposes of this mark-to-market election, repurchased) its holdings in those PFICs on the last day of the Fund’s taxable year. Such gains and losses are treated as ordinary income and loss. The QEF and mark-to-market elections may accelerate the recognition of income (without the receipt of cash) and increase the amount required to be distributed by a Fund to avoid taxation. Making either of these elections therefore may require a Fund to liquidate other investments (including when it is not advantageous to do so) to meet its distribution requirement, which also may accelerate the recognition of gain and affect the Fund’s total return. Dividends paid by PFICs will not be eligible to be treated as qualified dividend income. If a Fund indirectly invests in PFICs by virtue of the Fund’s investment in other funds, it may not make such PFIC elections; rather, the underlying funds directly investing in the PFICs would decide whether to make such elections.

Because it is not always possible to identify a foreign corporation as a PFIC, a Fund may incur the tax and interest charges described above in some instances.

Controlled Foreign Corporations. A U.S. person, including a Fund, who owns (directly or indirectly) 10% or more of the total combined voting power of all classes of stock of 10% or more of the total value of shares of all classes of stock of a foreign corporation is a “U.S. Shareholder” for purposes of the controlled foreign corporation (CFC) provisions of the Code. A CFC is a foreign corporation that, on any day of its taxable year, is owned (directly, indirectly, or constructively) more than 50% (measured by voting power or value) by U.S.

Shareholders. To the extent a Fund is a U.S. Shareholder in a CFC it will be required to include in gross income for U.S. federal income tax purposes for each taxable year of the Fund its pro rata share of its CFC's "Subpart F" income (discussed further below) and any "global intangible low-taxed income" or (GILTI) for the CFC's taxable year ending within the Fund's taxable year whether or not such income is actually distributed by the CFC. GILTI generally includes the active operating profits of the CFC, reduced by a deemed return on the tax basis of the CFC's depreciable tangible assets.

Subpart F income and GILTI are treated as ordinary income, regardless of the character of the CFC's underlying income. Net losses incurred by a CFC during a tax year do not flow through to a Fund and thus will not be available to offset income or capital gain generated from the Fund's other investments. In addition, net losses incurred by a CFC during a tax year generally cannot be carried forward by the CFC to offset gains realized by it in subsequent taxable years. To the extent a Fund invests in a CFC and recognizes "Subpart F" income or GILTI in excess of actual cash distributions from the CFC, if any, it may be required to sell assets (including when it is not advantageous to do so) to generate the cash necessary to distribute as dividends to its shareholders all of its income and gains and therefore to eliminate any tax liability at the Fund level. "Subpart F" income generally includes interest, OID, dividends, net gains from the disposition of stocks or securities, net gains from transactions (including futures) in commodities, and receipts with respect to securities loans.

A Fund's recognition of any "Subpart F" income or GILTI from an investment in a CFC will increase the Fund's tax basis in the CFC. Distributions by a CFC to the Fund, including in redemption of the CFC's shares, will be tax free, to the extent of the CFC's previously undistributed "Subpart F" income or GILTI, and will correspondingly reduce the Fund's tax basis in the CFC, and any distributions in excess of the Fund's tax basis in the CFC will be treated as realized gain. Any losses with respect to a Fund's shares of the CFC will not be currently recognized. A Fund's investment in a CFC will potentially have the effect of accelerating the Fund's recognition of income and causing its income to be treated as ordinary income, regardless of the character of the CFC's income. If a net loss is realized by a CFC, such loss is generally not available to offset the income earned by a Fund. In addition, the net losses incurred during a taxable year by a CFC cannot be carried forward by such CFC to offset gains realized by it in subsequent taxable years. A Fund will not receive any credit in respect of any non-U.S. tax borne by a CFC for which it is a U.S. Shareholder.

Tax Credit Bonds. If a Fund holds, directly or indirectly, one or more "tax credit bonds" issued on or before December 31, 2017 on one or more applicable dates during a taxable year, it is possible that a Fund will elect to permit its shareholders to claim a tax credit on their income tax returns equal to each shareholder's proportionate share of tax credits from the applicable bonds that otherwise would be allowed to a Fund. In such a case, a shareholder will be deemed to receive a distribution of money with respect to its Fund shares equal to the shareholder's proportionate share of the amount of such credits and be allowed a credit against the shareholder's U.S. federal income tax liability equal to the amount of such deemed distribution, subject to certain limitations imposed by the Code on the credits involved. Even if a Fund is eligible to pass through such tax credits to shareholders, a Fund may choose not to do so.

Options and Futures. In general, option premiums received by a Fund are not immediately included in the income of the Fund. Instead, the premiums are recognized when the option contract expires, the option is exercised by the holder, or a Fund transfers or otherwise terminates the option (for example, through a closing transaction). If a call option written by a Fund is exercised and the Fund sells or delivers the underlying stock, a Fund generally will recognize capital gain or loss equal to (a) sum of the strike price and the option premium received by a Fund minus (b) a Fund's basis in the stock. Such gain or loss generally will be short-term or long-term depending upon the holding period of the underlying stock. If securities are purchased by a Fund pursuant to the exercise of a put option written by it, a Fund generally will subtract the premium received for purposes of computing its cost basis in the securities purchased. Gain or loss arising in respect of a termination of a Fund's obligation under an option other than through the exercise of the option will be short-term gain or loss depending on whether the premium income received by a Fund is greater or less than the amount paid by a Fund (if any) in terminating the transaction. Thus, for example, if an option written by a Fund expires unexercised, a Fund generally will recognize short-term gain equal to the premium received.

A Fund's options activities may include transactions constituting straddles for U.S. federal income tax purposes, that is, that trigger the U.S. federal income tax straddle rules contained primarily in Section 1092 of the Code. Such straddles include, for example, positions in a particular security, or an index of securities, and one or more options that offset the former position, including options that are "covered" by a Fund's long position in the subject security. Very generally, where applicable, Section 1092 requires (i) that losses be deferred on positions deemed to be offsetting positions with respect to "substantially similar or related property," to the extent of unrealized gain in the latter, and (ii) that the holding period of such a straddle position that has not already been held for the long-term holding period be terminated and begin anew once the position is no longer part of a straddle. Options on single stocks that are not "deep in the money" may constitute qualified covered calls which generally, are not subject to the straddle rules; the holding period on stock underlying qualified covered calls that are "in the money" although not "deep in the money" will be suspended during the period that such calls are outstanding. The straddle rules and the rules governing qualified covered calls could cause gains that would otherwise constitute long-term capital gains to be treated as short-term capital gains, and distributions that would otherwise constitute qualified dividend income or qualify for the dividends received deduction to fail to satisfy the holding period requirements and therefore to be taxed as ordinary income or to fail to qualify for the dividends received deduction, as the case may be.

The tax treatment of certain positions entered into by a Fund, including regulated futures contracts, certain foreign currency positions and certain listed non-equity options, will be governed by section 1256 of the Code ("**section 1256 contracts**"). Gains or losses on section 1256 contracts generally are considered 60% long-term and 40% short-term capital gains or losses ("**60/40**"), although certain foreign currency gains and losses from such contracts may be treated as ordinary in character. Also, section 1256 contracts held by a Fund at the end of each taxable year (and, for purposes of the 4% excise tax, on certain other dates as prescribed under the Code) are marked to market with the result that unrealized gains or losses are treated as though they were realized and the resulting gain or loss is treated as ordinary or 60/40 gain or loss, as applicable.

Other Derivatives, Hedging, and Related Transactions. In addition to the special rules described above in respect of futures and options transactions, the Fund's transactions in other derivative instruments (for example, forward contracts and swap agreements), as well as any of its other hedging, short sale or similar transactions, may be subject to one or more special tax rules (for example, notional principal contract, straddle, constructive sale, wash sale and short sale rules). These rules may affect whether gains and losses recognized by the Fund are treated as ordinary or capital or as short-term or long-term, accelerate the recognition of income or gains to the Fund, defer losses to the Fund, and cause adjustments in the holding periods of the Fund's securities. These rules could therefore affect the amount, timing and/or character of distributions to shareholders. In addition, the tax rules applicable to derivatives are in many cases uncertain under current law. An adverse determination, future guidance by the IRS or U.S. Treasury regulations, in each case with potentially retroactive effect, might bear adversely on a Fund's satisfaction of the distribution or other requirements to maintain its qualification as a RIC and avoid a Fund-level tax.

Exchange-Traded Notes. The tax rules are uncertain with respect to the treatment, including timing, of income or gains arising in respect of ETNs. An adverse determination or future guidance by the IRS with respect to these rules (which determination or guidance could be retroactive) may affect a Fund's ability to satisfy the requirements for qualifying for treatment as a RIC and to avoid a Fund-level tax.

Book-Tax Differences. Certain of a Fund's investments in derivative instruments and foreign currency-denominated instruments, and any of a Fund's transactions in foreign currencies and hedging activities, are likely to produce a difference between its book income and the sum of its taxable income and net tax-exempt income (if any). If such a difference arises, and a Fund's book income is less than the sum of its taxable income and net tax-exempt income, the Fund could be required to make distributions exceeding book income to qualify as a RIC that is accorded special tax treatment. In the alternative, if a Fund's book income exceeds the sum of its taxable income (including realized capital gains) and net tax-exempt income, the distribution (if any) of such excess generally will be treated as (i) a dividend to the extent of the Fund's remaining earnings and profits (including

earnings and profits arising from tax-exempt income), (ii) thereafter, as a return of capital to the extent of the recipient's basis in its shares, and (iii) thereafter as gain from the sale or exchange of a capital asset.

Investments in Other RICs. A Fund's investments in shares of another mutual fund, exchange-traded fund or another company that qualifies as a RIC (each, an "underlying RIC") can cause the Fund to be required to distribute greater amounts of net investment income or net capital gain than the Fund would have distributed had it invested directly in the securities held by the underlying RIC, rather than in shares of the underlying RIC. Further, the amount or timing of distributions from a Fund qualifying for treatment as a particular character (for example, long-term capital gain, exempt interest, eligibility for dividends-received deduction, etc.) will not necessarily be the same as it would have been had the Fund invested directly in the securities held by the investment company. If a Fund receives dividends from an underlying RIC and the underlying RIC reports such dividends as qualified dividend income, then the Fund is permitted in turn to report to its shareholders a portion of its distributions as qualified dividend income, provided the Fund meets holding period and other requirements with respect to shares of the underlying RIC. If a Fund receives dividends from an underlying RIC and the underlying RIC reports such dividends as eligible for the dividends-received deduction, then the Fund is permitted in turn to report to its shareholders its distributions derived from those dividends as eligible for the dividends-received deduction as well, provided the Fund meets holding period and other requirements with respect to shares of the underlying RIC.

Net Investment Income Tax.

The Code generally imposes a 3.8% tax on the net investment income of certain individuals, trusts and estates to the extent their income exceeds certain threshold amounts. For these purposes, "net investment income" generally includes, among other things, (i) distributions paid by a Fund of net investment income and capital gains as described above, and (ii) any net gain from the sale, redemption, exchange or other taxable disposition of Fund shares. Shareholders are advised to consult their tax advisers regarding the possible implications of this additional tax on their investment in the Fund.

Backup Withholding.

Each Fund generally is required to withhold and remit to the U.S. Treasury a percentage of the taxable distributions and redemption proceeds paid to any individual shareholder who fails to properly furnish the Fund with a correct taxpayer identification number, who has under-reported dividend or interest income, or who fails to certify to a Fund that he or she is not subject to such withholding.

Backup withholding is not an additional tax. Any amounts withheld may be credited against the shareholder's U.S. federal income tax liability, provided the appropriate information is furnished to the IRS.

Tax-Exempt Shareholders.

Income of a RIC that would be UBTI if earned directly by a tax-exempt entity generally will not constitute UBTI when distributed to a tax-exempt shareholder of the RIC. Notwithstanding this blocking effect, a tax-exempt shareholder could realize UBTI by virtue of its investment in a Fund if shares in the Fund constitute debt-financed property in the hands of the tax-exempt shareholder within the meaning of Code Section 514(b).

A tax-exempt shareholder may also recognize UBTI if the Fund recognizes excess inclusion income derived from direct or indirect investments in residual interests in REMICs or equity interests in TMPs as described above, if the amount of such income recognized by a Fund exceeds the Fund's investment company taxable income (after taking into account deductions for dividends paid by a Fund).

In addition, special tax consequences apply to charitable remainder trusts ("CRTs") that invest in RICs that invest directly or indirectly in residual interests in REMICs or equity interests in TMPs. Under legislation

enacted in December 2006, a CRT (as defined in Section 664 of the Code) that realizes any UBTI for a taxable year must pay an excise tax annually of an amount equal to such UBTI. Under IRS guidance issued in October 2006, a CRT will not recognize UBTI as a result of investing in a Fund that recognizes excess inclusion income. Rather, if at any time during any taxable year a CRT (or one of certain other tax-exempt shareholders, such as the United States, a state or political subdivision, or an agency or instrumentality thereof, and certain energy cooperatives) is a record holder of a share in a Fund that recognizes excess inclusion income, then the Fund will be subject to a tax on that portion of its excess inclusion income for the taxable year that is allocable to such shareholders at the highest federal corporate income tax rate. The extent to which this IRS guidance remains applicable in light of the December 2006 legislation is unclear. To the extent permitted under the 1940 Act, each Fund may elect to specially allocate any such tax to the applicable CRT, or other shareholder, and thus reduce such shareholder's distributions for the year by the amount of the tax that relates to such shareholder's interest in a Fund.

CRTs and other tax-exempt investors are urged to consult their tax advisers concerning the consequences of investing in a Fund.

Sale, Exchange or Redemption of Shares.

The sale, exchange, or redemption of Fund shares may give rise to a gain or loss. In general, any gain or loss realized upon a taxable disposition of shares will be treated as long-term capital gain or loss if the shares have been held for more than 12 months. Otherwise, the gain or loss on the taxable disposition of Fund shares will be treated as short-term capital gain or loss. However, any loss realized upon a taxable disposition of Fund shares held by a shareholder for six months or less will be treated as long-term, rather than short-term, to the extent of any Capital Gain Dividends received (or deemed received) by the shareholder with respect to the shares.

Further, all or a portion of any loss realized upon a taxable disposition of Fund shares will be disallowed under the Code's "wash sale" rule if other substantially identical shares are purchased, including by means of dividend reinvestment, within 30 days before or after the disposition. In such a case, the basis of the newly purchased shares will be adjusted to reflect the disallowed loss.

Upon the redemption or exchange of Fund shares, the Fund or, in the case of shares purchased through a financial intermediary, the financial intermediary may be required to provide you and the IRS with cost basis and certain other related tax information about the Fund shares you redeemed or exchanged. See the Funds' Prospectus for more information.

An Authorized Participant who exchanges securities for Creation Units generally will recognize gain or loss from the exchange. The gain or loss will be equal to the difference between the market value of the Creation Units at the time of the exchange and the sum of the Authorized Participant's aggregate basis in the securities surrendered plus the amount of cash paid for such Creation Units. The ability of Authorized Participants to receive a full or partial cash redemption of Creation Units of a Fund may limit the tax efficiency of the Fund. An Authorized Participant who redeems Creation Units will generally recognize a gain or loss equal to the difference between the sum of the aggregate market value of any securities received plus the amount of any cash received for such Creation Units and the Authorized Participant's basis in the Creation Units. The IRS, however, may assert that an Authorized Participant may not be permitted to currently deduct losses realized upon an exchange of securities for Creation Units under the rules governing "wash sales" (for an Authorized Participant that does not mark-to-market its holdings), or on the basis that there has been no significant change in economic position.

Any gain or loss realized upon a creation or redemption of Creation Units will be treated as capital or ordinary gain or loss, depending on the holder's circumstances. Any capital gain or loss realized upon the creation of Creation Units will generally be treated as long-term capital gain or loss if the securities exchanged for such Creation Units have been held for more than one year and were held as capital assets in the hands of the exchanging Authorized Participant. Any capital gain or loss realized upon a redemption of Creation Units will

generally be treated as long-term capital gain or loss if the shares comprising the Creation Units have been held for more than one year. Otherwise, such capital gains or losses will be treated as short-term capital gains or losses. Any capital loss realized upon a redemption of Creation Units held for six months or less should be treated as a long-term capital loss to the extent of any amounts treated as distributions to the applicable Authorized Participant of long-term capital gains with respect to the Creation Units (including any amounts credited to the Authorized Participant as undistributed capital gains).

The Trust on behalf of a Fund has the right to reject an order for a purchase of shares of the Fund if the purchaser (or a group of purchasers) would, upon obtaining the shares so ordered, own 80% or more of the outstanding shares of the Fund and if, pursuant to Section 351 of the Code, the Fund would have a basis in the securities different from the market value of such securities on the date of deposit. The Trust also has the right to require information necessary to determine beneficial share ownership for purposes of the 80% determination. If a Fund does issue Creation Units to a purchaser (or a group of purchasers) that would, upon obtaining the shares so ordered, own 80% or more of the outstanding shares of the Fund, the purchaser (or group of purchasers) may not recognize gain or loss upon the exchange of securities for Creation Units.

Authorized Participants purchasing or redeeming Creation Units should consult their own tax advisors with respect to the tax treatment of any creation or redemption transaction and whether the wash sales rules apply and when a loss might be deductible.

Tax Shelter Reporting Regulations.

Under U.S. Treasury regulations, if a shareholder recognizes a loss of \$2 million or more for an individual shareholder or \$10 million or more for a corporate shareholder, the shareholder must file with the IRS a disclosure statement on IRS Form 8886. Direct holders of portfolio securities are in many cases excepted from this reporting requirement, but under current guidance, shareholders of a RIC are not excepted. Future guidance may extend the current exception from this reporting requirement to shareholders of most or all RICs. The fact that a loss is reportable under these regulations does not affect the legal determination of whether the taxpayer's treatment of the loss is proper. Shareholders should consult their tax advisers to determine the applicability of these regulations in light of their individual circumstances.

Foreign Taxation.

Income, proceeds and gains received by a Fund (or underlying RICs in which a Fund has invested) from sources within foreign countries may be subject to withholding and other taxes imposed by such countries, which would decrease the Fund's yield on securities subject to such taxes. Tax treaties between certain countries and the U.S. may reduce or eliminate such taxes. This will decrease the Fund's yield on securities subject to such taxes. If more than 50% of the value of a Fund's total assets at the close of a taxable year consists of securities of foreign corporations, the Fund will be eligible to elect to pass through to shareholders foreign income taxes that it pays. If this election is made, shareholders will be required to include their share of those taxes in gross income as a distribution from the Fund and generally will be allowed to claim a credit (or a deduction, if the shareholder itemizes deductions) for such amounts on their federal U.S. income tax return, subject to certain limitations. If a Fund were a qualified fund of funds, it would be permitted to elect to pass through to its shareholders foreign taxes it has paid or foreign taxes passed through to it by any underlying fund that itself elected to pass through such taxes to shareholders (see "Investments in Other RICs" above). Even if a Fund were eligible to make such an election for a given year, it may determine not to do so.

Foreign Shareholders.

Distributions by a Fund to shareholders that are not "U.S. persons" within the meaning of the Code ("**foreign shareholders**") properly reported by the Fund as (1) Capital Gain Dividends, (2) short-term capital gain dividends (3) interest-related dividends, each as defined and subject to certain conditions described below, and

(4) exempt-interest dividends generally are not subject to withholding of U.S. federal income tax (though such exempt interest dividends may be subject to backup withholding).

In general, the Code defines (1) “short-term capital gain dividends” as distributions of net short-term capital gains in excess of net long-term capital losses and (2) “interest-related dividends” as distributions from U.S. source interest income of types similar to those not subject to U.S. federal income tax if earned directly by an individual foreign shareholder, in each case to the extent such distributions are properly reported as such by a Fund in a written notice to shareholders.

The exceptions to withholding for Capital Gain Dividends and short-term capital gain dividends do not apply to (A) distributions to an individual foreign shareholder who is present in the United States for a period or periods aggregating 183 days or more during the year of the distribution and (B) distributions attributable to gain that is treated as effectively connected with the conduct by the foreign shareholder of a trade or business within the United States under special rules regarding the disposition of U.S. real property interests as described below. The exception to withholding for interest-related dividends does not apply to distributions to a foreign shareholder (A) that has not provided a satisfactory statement that the beneficial owner is not a U.S. person, (B) to the extent that the dividend is attributable to certain interest on an obligation if the foreign shareholder is the issuer or is a 10% shareholder of the issuer, (C) that is within certain foreign countries that have inadequate information exchange with the United States, or (D) to the extent the dividend is attributable to interest paid by a person that is a related person of the foreign shareholder and the foreign shareholder is a CFC. If a Fund invests in another underlying RIC that pays such distributions to the Fund, such distributions retain their character as not subject to withholding if properly reported when paid by the Fund to foreign shareholders. A Fund is permitted to report such part of its dividends as are eligible, to be treated as short-term capital gain or interest-related dividends, but is not required to do so. In the case of shares held through an intermediary, the intermediary is permitted to withhold even if a Fund reports all or a portion of a payment as a short-term capital gain or an interest-related dividend to shareholders.

Foreign shareholders should contact their intermediaries regarding the application of these rules to their accounts.

Distributions by a Fund to foreign shareholders other than Capital Gain Dividends, short-term capital gain dividends, interest-related dividends and exempt-interest dividends (*e.g.*, dividends attributable to dividend and foreign source interest income or to short-term capital gains or U.S. source interest income to which the exception from withholding described above does not apply) are generally subject to withholding of U.S. federal income tax at a rate of 30% (or lower applicable treaty rate).

A foreign shareholder is not, in general, subject to U.S. federal income tax on gains (and is not allowed a deduction for losses) realized on the sale of shares of a Fund unless (i) such gain is effectively connected with the conduct by the foreign shareholder of a trade or business within the United States, (ii) in the case of a foreign shareholder that is an individual, the shareholder is present in the United States for a period or periods aggregating 183 days or more during the year of the sale and certain other conditions are met, or (iii) the special rules relating to gain attributable to the sale or exchange of U.S. real property interests (“**USRPIs**”) apply to the foreign shareholder’s sale of shares of the Fund (as described below).

Subject to certain exceptions (for example, for a fund that is a “United States real property holding corporation” as described below), a Fund is generally not required to withhold on the amount of a non-dividend distribution (*i.e.*, a distribution that is not paid out of the Fund’s current or accumulated earnings and profits for the applicable taxable year) when paid to its foreign shareholders.

Foreign shareholders with respect to whom income from a Fund is effectively connected with a trade or business conducted by the foreign shareholder within the United States will in general be subject to U.S. federal income tax on the income derived from a Fund at the graduated rates applicable to U.S. citizens, residents or domestic corporations, whether such income is received in cash or reinvested in shares of a Fund and, in the case of a

foreign corporation, may also be subject to a branch profits tax. If a foreign shareholder is eligible for the benefits of a tax treaty, any effectively connected income or gain will generally be subject to U.S. federal income tax on a net basis only if it is also attributable to a permanent establishment maintained by the shareholder in the United States. More generally, foreign shareholders who are residents in a country with an income tax treaty with the United States may obtain different tax results than those described herein and are urged to consult their tax advisers.

Special rules would apply if a Fund were a qualified investment entity (“**QIE**”) because it is either a U.S. real property holding corporation (“**USRPHC**”) or would be a USRPHC but for the operation of certain exceptions to the definition of USRPIs described below. Very generally, a USRPHC is a domestic corporation that holds USRPIs the fair market value of which equals or exceeds 50% of the sum of the fair market values of the corporation’s USRPIs, interests in real property located outside the United States, and other trade or business assets. USRPIs are generally defined as any interest in U.S. real property and any interest (other than solely as a creditor) in a USRPHC or, very generally, an entity that has been a USRPHC in the last five years (a “**former USRPHC**”). A Fund that holds, directly or indirectly, significant interests in REITs may be a USRPHC. Interests in domestically controlled QIEs, including REITs and RICs that are QIEs, not-greater-than-10% interests in publicly traded classes of stock in REITs and not-greater-than-5% interests in publicly traded classes of stock in RICs generally are not USRPIs, but these exceptions do not apply for purposes of determining whether a Fund is a QIE.

If an interest in the Fund were a USRPI, the Fund would be required to withhold U.S. tax on the proceeds of a share redemption by a greater-than-5% foreign shareholder, in which case such foreign shareholder generally would also be required to file U.S. tax returns and pay any additional taxes due in connection with the redemption.

Moreover, if the Fund were a USRPHC or, very generally, had been one in the last five years, it would be required to withhold on amounts distributed to a greater-than-5% foreign shareholder to the extent such amounts would not be treated as a dividend, i.e., are in excess of the Fund’s current and accumulated earnings and profits for the applicable taxable year. Such withholding generally is not required if the Fund is a domestically controlled QIE.

If a Fund were a QIE, under a special “look-through” rule, any distributions by a Fund to a foreign shareholder (including, in certain cases, distributions made by the Fund in redemption of its shares) attributable directly or indirectly to (i) distributions received by the Fund from a lower-tier RIC or REIT that the Fund is required to treat as USRPI gain in its hands and (ii) gains realized on the disposition of USRPIs by the Fund would retain their character as gains realized from USRPIs in the hands of the Fund’s foreign shareholder and would be subject to U.S. tax withholding. In addition, such distributions could result in the foreign shareholder being required to file a U.S. tax return and pay tax on the distributions at regular U.S. federal income tax rates. The consequences to a foreign shareholder, including the rate of such withholding and character of such distributions (for example, as ordinary income or USRPI gain), would vary depending upon the extent of the foreign shareholder’s current and past ownership of the Fund.

Foreign shareholders of a Fund also may be subject to “wash sale” rules to prevent the avoidance of the tax-filing and -payment obligations discussed above through the sale and repurchase of Fund shares.

Foreign shareholders should consult their tax advisers and, if holding shares through intermediaries, their intermediaries, concerning the application of these rules to their investment in a Fund.

In order to qualify for any exemptions from withholding described above or for lower withholding tax rates under income tax treaties, or to establish an exemption from backup withholding, a foreign shareholder must comply with special certification and filing requirements relating to its non-U.S. status (including, in general, furnishing an IRS Form W-8BEN, W-8BEN-E or substitute form. Foreign shareholders should consult their tax advisers in this regard.

Special rules (including withholding and reporting requirements) apply to foreign partnerships and those holding Fund shares through foreign partnerships. Additional considerations may apply to foreign trusts and estates. Investors holding Fund shares through foreign entities should consult their tax advisers about their particular situation.

A foreign shareholder may be subject to state and local tax and to the U.S. federal estate tax in addition to the U.S. federal income tax referred to above.

Shareholder Reporting Obligations With Respect to Foreign Bank and Financial Accounts.

Shareholders that are U.S. persons and own, directly or indirectly, more than 50% of a Fund by vote or value could be required to report annually their financial interest in the Fund's foreign financial accounts, if any, on FinCEN Form 114, Report of Foreign Bank and Financial Accounts. Shareholders should consult a tax adviser, or if holding shares through an intermediary, their intermediary, regarding the applicability to them of this reporting requirement.

Other Reporting and Withholding Requirements.

Sections 1471-1474 of the Code and the U.S. Treasury and IRS guidance issued thereunder (collectively, "FATCA") generally require a Fund to obtain information sufficient to identify the status of each of its shareholders under FATCA or under an applicable intergovernmental agreement (an "IGA") between the United States and a foreign government. If a shareholder fails to provide this information or otherwise fails to comply with FATCA or an IGA, a Fund may be required to withhold under FATCA at a rate of 30% with respect to that shareholder on ordinary dividends it pays. The IRS and the U.S. Treasury have issued proposed regulations providing that these withholding rules will not be applicable to the gross proceeds of share redemptions or Capital Gain Dividends the Fund pays. If a payment by a Fund is subject to FATCA withholding, the Fund is required to withhold even if such payment would otherwise be exempt from withholding under the rules applicable to foreign shareholders described above (*e.g.*, short-term capital gain dividends and interest-related dividends).

Each prospective investor is urged to consult its tax adviser regarding the applicability of FATCA and any other reporting requirements with respect to the prospective investor's own situation, including investments through an intermediary.

General Considerations.

The U.S. federal income tax discussion set forth above is for general information only. Prospective investors should consult their tax advisers regarding the specific U.S. federal tax consequences of purchasing, holding, and disposing of shares of a Fund, as well as the effects of state, local, foreign, and other tax law and any proposed tax law changes.

SHARES AND VOTING RIGHTS

Shares of each class of a Fund represent an equal proportionate share in the assets, liabilities, income and expenses of that class of the Fund. All shares issued will be fully paid and non-assessable and will have no preemptive rights. Each whole share will be entitled to one vote as to any matter on which it is entitled to vote and each fractional share shall be entitled to a proportionate fractional vote. As a Delaware statutory trust, the Trust is not required to hold an annual shareholder meeting in any year in which the selection of trustees is not required to be acted on under the 1940 Act. Shareholder approval will be sought only for certain changes in the operations of a Fund and for the election of trustees under certain circumstances. Any Trustees of the Trust may be removed with or without cause at any meeting of the shareholders of the Trust by a vote of shareholders owning at least a majority of the outstanding shares or by written instrument, signed by a majority of the number

of Trustees prior to such removal. There shall be no cumulative voting in the election of Trustees. Generally, all shareholders of a Fund will vote together with all other shareholders of the Funds in the Trust and with all shareholders of all other funds that the Trust may form in the future on all matters affecting the Trust, including the election or removal of trustees, except when required by the 1940 Act or when the Trustees shall have determined that the matter affects one or more Funds or classes of shares materially differently, shares will be voted by an individual Fund or class; and when the Trustees have determined that the matter affects only the interests of one or more Funds or classes, only shareholders of such Funds or classes shall be entitled to vote.

TRANSFER AGENT

J.P.Morgan Chase Bank, N.A., 70 Fargo Street, Boston, MA 02210, serves as transfer agent for the Trust.

CUSTODIAN

J.P.Morgan Chase Bank, N.A., 383 Madison Avenue, New York, NY 10017, serves as custodian for each of the Funds and is responsible for maintaining custody of each of those Funds' cash and investments.

LEGAL COUNSEL

Ropes & Gray LLP, 1211 Avenue of the Americas, New York, New York 10036, serves as legal counsel to the Trust.

INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

Deloitte & Touche LLP, 695 Town Center Drive, Suite 1000, Costa Mesa, CA 92626, the independent registered public accounting firm is responsible for conducting the annual audit of the financial statements of the Funds. The selection of the independent registered public accounting firm is approved annually by the Board of Trustees.

FINANCIAL STATEMENTS

The audited financial statements within each Fund's report to shareholders for the period ended September 30, 2023, the notes thereto, and the report of Deloitte & Touche LLP thereon, are incorporated by reference to the Trust's annual report to shareholders, which was filed with the SEC on Form N-CSR on December 1, 2023 (Accession Number: 0001885076-23-000010).

APPENDIX A

DESCRIPTION OF S&P GLOBAL RATINGS (“S&P”), MOODY’S INVESTORS SERVICE, INC. (“MOODY’S”) RATINGS AND FITCH, INC. (“FITCH”) RATINGS

S&P

AAA – An obligation rated ‘AAA’ has the highest rating assigned by S&P Global Ratings. The obligor’s capacity to meet its financial commitments on the obligation is extremely strong.

AA – An obligation rated ‘AA’ differs from the highest-rated obligations only to a small degree. The obligor’s capacity to meet its financial commitments on the obligation is very strong.

A – An obligation rated ‘A’ is somewhat more susceptible to the adverse effects of changes in circumstances and economic conditions than obligations in higher-rated categories. However, the obligor’s capacity to meet its financial commitments on the obligation is still strong.

BBB – An obligation rated ‘BBB’ exhibits adequate protection parameters. However, adverse economic conditions or changing circumstances are more likely to weaken the obligor’s capacity to meet its financial commitments on the obligation.

BB, B, CCC, CC, and C – Obligations rated ‘BB’, ‘B’, ‘CCC’, ‘CC’, and ‘C’ are regarded as having significant speculative characteristics. ‘BB’ indicates the least degree of speculation and ‘C’ the highest. While such obligations will likely have some quality and protective characteristics, these may be outweighed by large uncertainties or major exposure to adverse conditions.

BB – An obligation rated ‘BB’ is less vulnerable to nonpayment than other speculative issues. However, it faces major ongoing uncertainties or exposure to adverse business, financial, or economic conditions that could lead to the obligor’s inadequate capacity to meet its financial commitments on the obligation.

B – An obligation rated ‘B’ is more vulnerable to nonpayment than obligations rated ‘BB’, but the obligor currently has the capacity to meet its financial commitments on the obligation. Adverse business, financial, or economic conditions will likely impair the obligor’s capacity or willingness to meet its financial commitments on the obligation.

CCC – An obligation rated ‘CCC’ is currently vulnerable to nonpayment, and is dependent upon favorable business, financial, and economic conditions for the obligor to meet its financial commitments on the obligation. In the event of adverse business, financial, or economic conditions, the obligor is not likely to have the capacity to meet its financial commitments on the obligation.

CC – An obligation rated ‘CC’ is currently highly vulnerable to nonpayment. The ‘CC’ rating is used when a default has not yet occurred, but S&P Global Ratings expects default to be a virtual certainty, regardless of the anticipated time to default.

C – An obligation rated ‘C’ is currently highly vulnerable to nonpayment, and the obligation is expected to have lower relative seniority or lower ultimate recovery compared with obligations that are rated higher.

D – An obligation rated ‘D’ is in default or in breach of an imputed promise. For non-hybrid capital instruments, the ‘D’ rating category is used when payments on an obligation are not made on the date due, unless S&P Global Ratings believes that such payments will be made within the next five business days in the absence of a stated grace period or within the earlier of the stated grace period or the next 30 calendar days. The ‘D’ rating also will be used upon the filing of a bankruptcy petition or the taking of similar action and where default on an obligation is a virtual certainty, for example due to automatic stay provisions. A rating on an obligation is lowered to ‘D’ if it is subject to a distressed debt restructuring.

* Ratings from 'AA' to 'CCC' may be modified by the addition of a plus (+) or minus (-) sign to show relative standing within the rating categories.

Moody's

Aaa – Obligations rated Aaa are judged to be of the highest quality, subject to the lowest level of credit risk.

Aa – Obligations rated Aa are judged to be of high quality and are subject to very low credit risk.

A – Obligations rated A are judged to be upper-medium grade and are subject to low credit risk.

Baa – Obligations rated Baa are judged to be medium-grade and subject to moderate credit risk and as such may possess certain speculative characteristics.

Ba – Obligations rated Ba are judged to be speculative and are subject to substantial credit risk.

B – Obligations rated B are considered speculative and are subject to high credit risk.

Caa – Obligations rated Caa are judged to be speculative of poor standing and are subject to very high credit risk.

Ca – Obligations rated Ca are highly speculative and are likely in, or very near, default, with some prospect of recovery of principal and interest.

C – Obligations rated C are the lowest rated and are typically in default, with little prospect for recovery of principal or interest.

Note: Moody's appends numerical modifiers 1, 2, and 3 to each generic rating classification from Aa through Caa. The modifier 1 indicates that the obligation ranks in the higher end of its generic rating category; the modifier 2 indicates a mid-range ranking; and the modifier 3 indicates a ranking in the lower end of that generic rating category. Additionally, a "(hyb)" indicator is appended to all ratings of hybrid securities issued by banks, insurers, finance companies, and securities firms.*

** By their terms, hybrid securities allow for the omission of scheduled dividends, interest, or principal payments, which can potentially result in impairment if such an omission occurs. Hybrid securities may also be subject to contractually allowable write-downs of principal that could result in impairment. Together with the hybrid indicator, the long-term obligation rating assigned to a hybrid security is an expression of the relative credit risk associated with that security.*

Fitch

AAA: Highest Credit Quality. 'AAA' ratings denote the lowest expectation of default risk. They are assigned only in cases of exceptionally strong capacity for payment of financial commitments. This capacity is highly unlikely to be adversely affected by foreseeable events.

AA: Very High Credit Quality. 'AA' ratings denote expectations of very low default risk. They indicate very strong capacity for payment of financial commitments. This capacity is not significantly vulnerable to foreseeable events.

A: High Credit Quality. 'A' ratings denote expectations of low default risk. The capacity for payment of financial commitments is considered strong. This capacity may, nevertheless, be more vulnerable to adverse business or economic conditions than is the case for higher ratings.

BBB: Good Credit Quality. 'BBB' ratings indicate that expectations of default risk are currently low. The capacity for payment of financial commitments is considered adequate, but adverse business or economic conditions are more likely to impair this capacity.

BB: Speculative. 'BB' ratings indicate an elevated vulnerability to default risk, particularly in the event of adverse changes in business or economic conditions over time; however, business or financial flexibility exists that supports the servicing of financial commitments.

B: Highly Speculative. 'B' ratings indicate that material default risk is present, but a limited margin of safety remains. Financial commitments are currently being met; however, capacity for continued payment is vulnerable to deterioration in the business and economic environment.

CCC: Substantial Credit Risk. Very low margin for safety. Default is a real possibility.

CC: Very High Levels of Credit Risk. Default of some kind appears probable.

C: Near Default. A default or default-like process has begun, or for a closed funding vehicle, payment capacity is irrevocably impaired. Conditions that are indicative of a 'C' category rating for an issuer include:

- The issuer has entered into a grace or cure period following non-payment of a material financial obligation;
- The formal announcement by the issuer or their agent of a distressed debt exchange; and
- A closed financing vehicle where payment capacity is irrevocably impaired such that it is not expected to pay Interest and/or principal in full during the life of the transaction, but where no payment default is imminent.

RD: Restricted Default. 'RD' ratings indicate an issuer that in Fitch's opinion has experienced:

- An uncured payment default or distressed debt exchange on a bond, loan or other material financial obligation, but
- Has not entered into bankruptcy filings, administration, receivership, liquidation, or other formal winding-up procedure, and
- Has not otherwise ceased operating.

This would include:

- The selective payment default on a specific class or currency of debt;
- The uncured expiry of any applicable original grace period, cure period or default forbearance period following a payment default on a bank loan, capital markets security or other material financial obligation.

D: Default. 'D' ratings indicate an issuer that in Fitch's opinion has entered into bankruptcy filings, administration, receivership, liquidation or other formal winding-up procedure or that has otherwise ceased business and debt is still outstanding. Default ratings are not assigned prospectively to entities or their obligations; within this context, non-payment on an instrument that contains a deferral feature or grace period will generally not be considered a default until after the expiration of the deferral or grace period, unless a default is otherwise driven by bankruptcy or other similar circumstance, or by a distressed debt exchange. In all cases, the assignment of a default rating reflects the agency's opinion as to the most appropriate rating category consistent with the rest of its universe of ratings and may differ from the definition of default under the terms of an issuer's financial obligations or local commercial practice.

APPENDIX B

Proxy Voting Guidelines

The Advisers have a fiduciary duty to clients, and shall exercise diligence and care, with respect to its proxy voting authority. Accordingly, the Advisers will review each proposal to determine the relevant facts and circumstances and adopt the following guidelines as a framework for analysis in seeking to maximize the value of client investments. The guidelines do not address all potential voting matters and actual votes by the Advisers may vary based on specific facts and circumstances.

A. Director Elections

Directors play a critical role in ensuring that the company and its management serve the interests of its shareholders by providing leadership and appropriate oversight. We believe that the board of directors should have the requisite industry knowledge, business acumen and understanding of company stakeholders in order to discharge its duties effectively.

| Proposal | Shareholder Proposal | Anticipated Vote |
|---|----------------------|---------------------|
| Frequency of Elections Electing all directors annually. | | For |
| Uncontested Elections Voting management nominees, unless the nominee lacks independence or focus, has had chronic absences or presents other material concerns to the detriment of the effectiveness of the board. | | For |
| Majority Voting Allowing majority voting unless incumbent directors must resign if they do not receive a majority vote in an uncontested election. | | For |
| Cumulative Voting Allowing cumulative voting unless the company previously adopted a majority voting policy. | | For |
| Changes in Board Structure Changing the board structure, such as the process for vacancies or director nominations, or the board size, unless there is an indication that the change is an anti-takeover device, or it diminishes shareholder rights. | | For |
| Stock Ownership Requiring directors to own company shares. | X | Against |
| Contested Elections The qualifications of nominees on both slates, management track record and strategic plan for enhancing shareholder value, and company financial performance generally will be considered when voting nominees in a contested election. | X | Case-by-Case |

B. Section 14A Say-On-Pay Votes

Current law requires companies to allow shareholders to cast non-binding advisory votes on the compensation for named executive officers, including the frequency of such votes. The Advisers generally support proposals for annual votes, as well as the ratification of executive compensation unless the compensation structure or any prior actions taken by the board or compensation committee warrant a case-by-case analysis.

| Proposal | Shareholder Proposal | Anticipated Vote |
|--|----------------------|---------------------|
| Frequency of Say-On-Pay Votes Annual shareholder advisory votes regarding executive compensation. | X | For |
| Compensation Disclosures Seeking additional disclosures related to executive and director pay unless similar information is already provided in existing disclosures or reporting. | X | For |
| Executive Compensation Advisory Executive compensation proposals generally will be assessed based on its structure, prevailing industry practice and benchmarks, and any problematic prior pay practices or related issues involving the board/compensation committee. | X | Case-by-Case |
| Golden Parachute Advisory Golden parachute proposals, in general, will be assessed based on the existing change-in-control arrangements, the nature and terms of the triggering event(s) and the amount to be paid. | X | Case-by-Case |

C. Audit-Related

The Advisers generally support proposals for the selection or ratification of independent auditors, subject to a consideration of any conflicts of interest, poor accounting practices or inaccurate prior opinions and related fees.

| Proposal | Shareholder Proposal | Anticipated Vote |
|---|----------------------|---------------------|
| Appointment of Auditors Selecting or ratifying independent auditors, unless there is a material conflict of interest, a history of poor accounting practice or inaccurate opinions, or excessive fees. | | For |
| Non-Audit/Consulting Services Other alternative service providers, conflicts of interest, and company disclosures are areas of consideration when voting proposals to limit other engagements with auditors. | X | Case-by-Case |
| Indemnification of Auditors Indemnification of auditors generally will be assessed based on the nature of the engagement, the auditor's work history and field of expertise, and the terms of the agreement such as its impact on the ability of shareholders to pursue legal recourse against the auditor for certain acts or omissions. | X | Case-by-Case |
| Rotation of Auditors Shareholder proposals requiring auditor rotation generally will be assessed based on any audit issues involving the company, the auditor's tenure with the company, and policies and practices surrounding auditor evaluations. | X | Case-by-Case |

D. Investment Company Matters

When the Advisers invest in a DoubleLine Fund with other public shareholders, the Advisers will vote the shares of such fund in the same proportion as the votes of the other shareholders. Under this “echo voting” approach, the Advisers’ potential conflict is mitigated by replicating the voting preferences expressed by the other shareholders. With respect to specific proposals involving the DoubleLine Funds, the Advisers generally support recommendations by the fund’s board unless applicable laws and regulations prohibit the Advisers from doing so.

| Proposal | Shareholder Proposal | Anticipated Vote |
|--|----------------------|---------------------|
| Share Classes Issuance of new classes or series of shares. | | For |
| Investment Objectives Changing a fundamental investment objective to nonfundamental. | | Against |
| Investment Restrictions Changing fundamental restrictions to nonfundamental generally will be assessed in consideration of the target investments, reason(s) for the change and its impact on the portfolio. | | Case-by-Case |
| Distribution Agreements Distribution agreements generally will be assessed based on the distributor’s services and reputation, applicable fees, and other terms of the agreement. | | Case-by-Case |
| Investment Advisory Agreements Investment advisory agreements generally will be assessed based on the applicable fees, fund category and investment objective, and performance. | | Case-by-Case |

E. Shareholder Rights and Defenses

The Advisers believe that companies have a fundamental obligation to protect the rights of shareholders. Therefore, the Advisers generally support proposals that hold the board and management accountable in serving the best interest of shareholders and that uphold their rights. However, the Advisers generally will not support proposals from certain shareholders that are hostile, disruptive, or are otherwise counter to the best interest of the Advisers’ clients.

| Proposal | Shareholder Proposal | Anticipated Vote |
|---|----------------------|------------------|
| Appraisal Rights Providing shareholders with rights of appraisal. | X | For |
| Fair Price Provision Fair price provisions that ensures each shareholder’s securities will be purchased at the same price if the company is acquired in disagreement with the board. However, fair price provisions may not be supported if it is used as an anti-takeover device by the board. | X | For |
| Special Meetings Providing or restoring rights to call a special meeting so long as the threshold to call a meeting is no less than 10 percent of outstanding shares. | X | For |
| Confidential Voting Allowing shareholders to vote confidentially. | X | For |

| Proposal | Shareholder Proposal | Anticipated Vote |
|---|----------------------|---------------------|
| Written Consents Allowing shareholders to act by written consent. | X | For |
| Greenmail Adopting anti-greenmail charter or bylaw amendments or otherwise restricting the company's ability to make greenmail payments for repurchasing shares at a premium to prevent a hostile takeover. | X | For |
| Supermajority Vote Requiring a supermajority vote, unless there are disproportionate substantial shareholders that weaken minority votes. | | Against |
| Bundled Proposals Bundled or conditional proposals generally will be reviewed to determine the benefit or cost of the matters included or if there is a controversy or any matter that is adverse to shareholder interests. | | Case-by-Case |
| Preemptive Rights Preemptive rights, in general, will be assessed based on the size of the company and its shareholder base, for which larger publicly held companies with a broad shareholder base may be less ideal. | | Case-by-Case |
| Shareholder Rights Plans (Poison Pills) Poison pills generally will be assessed based on the company's governance practices, existing takeover defenses, and the terms of the plan, including the triggering mechanism, duration, and redemption/rescission features. Requests to have shareholders ratify plans generally will be supported. | X | Case-by-Case |

F. Extraordinary Transactions

Proposals for transactions that may affect the ownership interests or voting rights of shareholders, such as mergers, asset sales and corporate or debt restructuring, will be assessed on a case-by-case basis generally in consideration of the economic outcome for shareholders, the potential dilution of shareholder rights and its impact on corporate governance, among other relevant factors.

| Proposal | Shareholder Proposal | Anticipated Vote |
|---|----------------------|---------------------|
| Reincorporation Reincorporating in another state or country in support of the rights and economic interests of shareholders. | | For |
| Merger, Corporate Restructuring and Spin Offs Merger, corporate restructuring and spin off proposals generally will be assessed with the view of maximizing the economic value of shareholder interests. The purchase or sale price and other deal terms will be reviewed, among other factors, to ensure that the transaction is aligned with the long-term interests of shareholders. | | Case-by-Case |
| Debt Restructuring The terms of the transaction, current capital markets environment, and conflicts of interest are factors that generally will be considered for ensuring that the proposal enhances the economic value of shareholder interests. | | Case-by-Case |

| Proposal | Shareholder Proposal | Anticipated Vote |
|---|----------------------|---------------------|
| Liquidations and Asset Sales As with other transaction proposals, the long-term economic impact of the transaction will be the focus of review of such proposals and, in general, factors such as the sale price, costs and conflicts of interest will be considered. | | Case-by-Case |

G. Capital Structure

The Advisers believe that the prudent management of debt and equity to finance company operations and growth, and which is supportive of shareholders' rights and economic interests, is critical to financial viability.

| Proposal | Shareholder Proposal | Anticipated Vote |
|--|----------------------|---------------------|
| Common Stock Issuing common stock for recapitalizations, stock splits, dividends or otherwise reasonably amending outstanding shares for a specific purpose. | | For |
| Multi-Class Shares Adopting multi-class share structures so long as they have equal voting rights. | | For |
| Repurchase Programs Adopting plans to repurchase shares in the open market unless shareholders cannot participate on equal terms. | | For |
| Blank Check Preferred Stock Allowing the board to issue preferred shares without prior shareholder approval and setting the terms and voting rights of preferred shares at the board's discretion. | | Against |
| Recapitalization Plans The rationale and objectives; current capital markets environment; impact on shareholder interests including conversion terms, dividends and voting rights; and any material conflicts of interest are factors that generally will be considered when reviewing proposals to reclassify debt or equity capital. | | Case-by-Case |

H. Compensation

The Advisers believe that compensation arrangements should align the economic interests of directors, management, and employees with those of shareholders and consider factors such as (1) local norms, (2) industry-specific practices and performance benchmarks, and (3) the structure of base and incentive compensation. The Advisers generally support transparency (e.g., disclosures related to the performance metrics and how they promote better corporate performance, etc.) and periodic reporting with respect to compensation.

| Proposal | Shareholder Proposal | Anticipated Vote |
|---|----------------------|------------------|
| Employee 401 (k) Plan Adopting a 401 (k) plan for employees. | | For |
| Employee Stock Option Plan (ESOP) Requiring shareholder approval to adopt a broad-based ESOP or to increase outstanding shares for an existing plan unless the allocation of outstanding shares to the ESOP exceeds five percent or 10 percent among all stock-based plans. | | For |

| Proposal | Shareholder Proposal | Anticipated Vote |
|---|----------------------|---------------------|
| Recoupment Provisions (Clawbacks) Adopting clawback provisions in cases of revised financial results or performance indicators on which prior compensation payments were based, as well as for willful misconduct or violations of law or regulation that result in financial or reputational harm to the company. | X | For |
| Limits on Executive or Director Compensation Setting limits on executive or director compensation unless there is a substantial deviation from industry practice or any problematic issue involving the board/compensation committee or prior pay practices. | X | Against |
| Equity-Based and Other Incentive Plans Incentive plans, in general, will be assessed based on the prevailing local and industry-specific practices and performance benchmarks, the terms of the plan and whether they are aligned with company goals and shareholder interests, the cost of the plan, and the overall compensation structure. | | Case-by-Case |
| Severance Agreements for Executives (Golden Parachutes) Golden parachutes generally will be assessed based on the existing change-in-control arrangements, the nature and terms of the triggering event(s) and the amount to be paid. | | Case-by-Case |

I. Corporate Governance

The Advisers believe that authority and accountability for establishing business strategies, corporate policies and compensation generally should rest with the board and management. The independence, qualifications, and integrity of the board as well as the effectiveness of management and their oversight, which must be aligned with shareholder interests, are essential to good governance. The following general guidelines reflect these principles although material environmental, social and governance (ESG) factors, which have a potential financial impact on the company and the valuation of client investments, if any, are also considered.

| Proposal | Shareholder Proposal | Anticipated Vote |
|---|----------------------|------------------|
| Quorum Requirements Establishing a majority requirement, unless shareholder turnout has been an issue, or a reduced quorum is reasonable based on applicable laws or regulations and the market capitalization or ownership structure of the company. | | For |
| Annual Meetings Changing the date, time, or location of annual meetings, unless the proposed schedule or location is unreasonable. | | For |

| Proposal | Shareholder Proposal | Anticipated Vote |
|--|----------------------|------------------|
| Board Size Setting the board size, so long as the proposal is consistent with the prevailing industry practice and applicable laws or regulations. | | For |
| Proxy Access Allowing shareholders to nominate director candidates in proxy ballots with reasonable limitations (e.g., minimum percentage and duration of ownership and a cap on board representation) for preventing potential abuse by certain shareholders. | X | For |

| Proposal | Shareholder Proposal | Anticipated Vote |
|--|----------------------|------------------|
| Independent Directors Requiring the board chair and a majority of directors to be independent directors. Proposals for a lead independent director may be supported in cases where the board chair is not independent. | X | For |
| Independent Committees Requiring independent directors exclusively for the audit, compensation, nominating and governance committees. | X | For |
| Removal of Directors Removing a director without cause. | X | For |
| Indemnification of Directors and Officers Indemnifying directors and officers for acts and omissions made in good faith and were believed to be in the best interest of the company. Limitations on liability involving willful misconduct or violations of law or regulation, or a breach of fiduciary duty, generally will be voted against. | | For |
| Term Limits for Directors Imposing term limits on directors unless the director evaluation process is ineffective and related issues persist. | X | Against |
| Classified Boards Establishing a classified board. | | Against |
| Adjournment of Meetings Providing management the authority to adjourn annual or special meetings without reasonable grounds. | | Against |
| Amendments to Bylaws Giving the board the authority to amend bylaws without shareholder approval. | | Against |

J. Environment or Climate

The Advisers would generally consider the recommendations of management for shareholder proposals involving environmental issues as it believes that, in most cases, elected directors and management are in the best position to address such matters. In addition, reporting that provides meaningful information for evaluating the financial impact of environmental policies and practices is generally supported unless it is unduly costly or burdensome or it places the company at a competitive disadvantage. Material ESG factors, which have a potential financial impact on the company and the valuation of client investments, if any, are also considered.

| Proposal | Shareholder Proposal | Anticipated Vote |
|--|----------------------|---------------------|
| Environmental and Climate Disclosures Providing environmental/climate-related disclosures and reporting unless it is duplicative or unsuitable. | | For |
| Environmental and Climate Policies Environmental and climate policies generally will be assessed based on the company's related governance practices, local and industry-specific practices, the nature and extent of environmental and climate risks applicable to the company, and the economic benefit to shareholders. | | Case-by-Case |

K. Human Rights or Human Capital/Workforce

The Advisers would generally consider the recommendations of management for shareholder proposals involving social issues as it believes that, in most cases, elected directors and management are in the best position to address such matters. In addition, reporting that provides meaningful information for evaluating the financial impact of social policies and practices is generally supported unless it is unduly costly or burdensome or it places the company at a competitive disadvantage. Material ESG factors, which have a potential financial impact on the company and the valuation of client investments, if any, are also considered.

| Proposal | Shareholder Proposal | Anticipated Vote |
|--|----------------------|---------------------|
| Human Rights and Labor Disclosures Providing human rights and labor-related disclosures and reporting unless it is duplicative or unsuitable. | | For |
| Human Rights and Labor Policies Human rights and labor policies generally will be assessed based on the company's related governance practices, applicable law or regulations, local and industry-specific practices, the nature and extent of supply chain or reputational risks applicable to the company, and their economic benefit to shareholders. | | Case-by-Case |

L. Diversity, Equity, and Inclusion

The Advisers generally support reporting that provides meaningful information for evaluating the financial impact of diversity, equity, and inclusion (DEI) policies and practices unless it is unduly costly or burdensome. For policy proposals, the Advisers will consider existing policies, regulations and applicable local standards and best practices, to determine if they provide an added benefit to shareholders. Material ESG factors, which have a potential financial impact on the company and the valuation of client investments, if any, are also considered.

| Proposal | Shareholder Proposal | Anticipated Vote |
|---|----------------------|---------------------|
| DEI Disclosures Providing Equal Employment Opportunity (EEO-1) Reports, and other additional disclosures or reporting unless it is duplicative or unsuitable. | | For |
| Anti-Discrimination Policy Adopting an anti-discrimination and harassment policy. | | For |
| Other DEI Policies Other DEI policies generally will be assessed based on the company's related governance practices, applicable law or regulations, and local and industry-specific practices. | | Case-by-Case |

M. Other Social Issues

| Proposal | Shareholder Proposal | Anticipated Vote |
|--|----------------------|---------------------|
| Political Contribution and Activities Political contributions and lobbying activities generally will be reviewed in consideration of legal restrictions and requirements, applicable policies and historical practice, and its cost-benefit to the company. Related disclosures to shareholders generally are supported. | | Case-by-Case |

| Proposal | Shareholder Proposal | Anticipated Vote |
|---|----------------------|---------------------|
| Charitable Contributions Charitable contributions, in general, will be reviewed in consideration of applicable policies and historical practice, conflicts of interests, as well as the cost-benefit of charitable spending. Related disclosures to shareholders generally are supported. | | Case-by-Case |
