

DoubleLine Shiller Enhanced International CAPE®

September 2024 | Europe Stock | Tickers: DSEUX/DLEUX

Investment Objective

The Fund's investment objective is to seek total return which exceeds the total return of its benchmark index over a full market cycle.

Investment Approach

The Fund will seek to use derivatives, or a combination of derivatives and direct investments, to earn a return that tracks closely the performance of the Shiller Barclays CAPE® Europe Net TR Index (the "Index"). The Fund will invest in a portfolio of debt securities to seek to provide additional long-term total return.

Investment Philosophy and Process

Maintain a core portfolio of debt instruments that focuses on global fixed income sector rotation while simultaneously obtaining exposure to a European Equity sector rotation strategy via the Index. The Index aims to identify undervalued sectors based on a modified CAPE® Ratio, and then uses a momentum factor to seek to mitigate the effects of potential value traps.

The Fund's goal is to outperform the Benchmark by obtaining 100% notional exposure to the Index and 100% exposure to the underlying fixed income collateral portfolio. Historically, the Fund's beta has been similar to that of the European equity market. This capital efficiency is one of the key components of the Fund.

Bond Ratings - Grades given to bonds that indicate their credit quality as determined by a private independent rating service such as Standard and Poor's. The firm evaluates a bond issuer's financial strength, or its ability to pay a bond's principal and interest in a timely fashion. Ratings are expressed as letters ranging from 'AAA', which is the highest grade, to 'D', which is the lowest grade. In limited situations when the rating agency has not issued a formal rating, the rating agency will classify the security as not-rated. Investment grade refers to bonds with ratings BBB and higher. Below investment grade refers to bonds with ratings BB and lower.

Credit Distribution is determined from the highest available credit rating from any Nationally Recognized Statistical Rating Agency ("NRSRO", generally S&P, Moody's and Fitch). DoubleLine chooses to display credit ratings using S&P's rating convention, although the rating itself might be sourced from another NRSRO. In limited situations when the rating agency has not issued a formal rating, the rating agency will classify the security as unrated.

Definition of Terms

Agency - Mortgage securities whose principal and interest are effectively guaranteed by the U.S. Government agency including Fannie Mae (FNMA) or Freddie-Mac (FHLMC).

Beta - Measure of the volatility, or systematic risk, of a security or portfolio compared to the market as a whole.

Duration - A commonly used measure of the potential volatility of the price of a debt securities, prior to maturity. Securities with a longer duration generally have more volatile prices than securities of comparable quality with a shorter duration.

Fixed Income Sector Allocation - The figures shown for the fixed income sector allocation represent the relative net assets invested in the displayed categories of fixed income and cash only. The figures shown for the CAPE® Europe sector allocations reflect the four sectors selected by the CAPE® Europe index for the time period and their allocations as of month-end.

Market Capitalization (Mkt Cap) - Total U.S. dollar market value of a company's outstanding shares of stock. Commonly referred to as "market cap," it is calculated by multiplying the total number of a company's outstanding shares by the current market price of one share.

SEC Yield - A standard yield calculation developed by the U.S. Securities and Exchange Commission (SEC) that allows for fairer comparisons of bond funds. It is based on the most recent 30-day period covered by the fund's filings with the SEC.

Standard Deviation - A measure of the dispersion of a set of data from its mean. The more spread apart the data, the higher the deviation. Calculated by the square-root of the variance.

Weighted Average Life - The average number of years for which each dollar of unpaid principal on a loan or mortgage remains outstanding.

Risk Disclosure

Investments in debt securities typically decrease in value when interest rates rise. This risk is usually greater for longer-term debt securities. Investments in lower-rated and non-rated securities present a greater risk of loss to principal and interest than higher-rated securities. Investments in ABS and MBS include additional risks that investors should be aware of such as credit risk, prepayment risk, possible illiquidity and default, as well as increased susceptibility to adverse economic developments. The Fund invests in foreign securities which involve greater volatility and political, economic and currency risks and differences in accounting methods. These risks are greater for investments in emerging markets. Derivatives involve special risks including correlation, counterparty, liquidity, operational, accounting and tax risks. These risks, in certain cases, may be greater than the risks presented by more traditional investments. Investing in ETFs involve additional risks such as the market price of the shares may trade at a discount to its net asset value ("NAV"), an active secondary trading market may not develop or be maintained, or trading may be halted by the exchange in which they trade, which may impact a Fund's ability to sell its shares. The Fund may make short sales of securities, which involves the risk that losses may exceed the original amount invested. Equities may decline in value due to both real and perceived general market, economic and industry conditions.
